Minimum Ship Manifold Spacing 1		—	—	—
2	—	6 ft. 9 in.	6 ft. 9 in.	6 ft. 9 in.
3	—	6 ft. 9 in.	6 ft. 9 in.	6 ft. 9 in.
4	—	6 ft. 9 in.	6 ft. 9 in.	6 ft. 9 in.
Quick Disconnect Coupling (QDC) Size (in.)	12	16	16	16
Manifold Size Range Acceptable to QDC (in.)	10 to 16	12 to 16	12 to 16	12 to 16

Note: (1) Although all berths are designed to handle vessels in the 16,000 d.w.t. size, loading arm size requires ship's manifolds to be a minimum of 10 in. in diameter. Normally, vessels less than 45,000 d.w.t. will be handled at Berth No. 1.

(2) Because of mooring dolphin limitations, vessels of more than 180,000 d.w.t. would be acceptable only if their deck machinery and mooring leads allowed an efficient bow and stern mooring line pattern. In addition to this requirement, distance from bow to manifold and prevailing weather conditions would have to be considered before berthing of such vessels would be authorised.

BALLAST – continued.

No. 5 berth is situated approx. 1.25 miles from the reception tanks and has a possible head of 150 ft. Max. pressure 40 p.s.i. (approx.).

In the event of any stripping problems, it is recommended that tanks containing unpumpable ballast be stripped internally to the slop tank and that the Load-on-top procedures be adopted.

Segregated Ballast: Only segregated ballast will be permitted to be discharged overboard. Segregated ballast is defined as ballast water that is introduced into a tank which is completely separated from the cargo oil and the oil fuel system and which is permanently allocated to the carriage of ballast. The deck log book must record all times of ballast discharge and when pumps are started or stopped. This log must also indicate whether or not the segregated ballast is being dropped in the initial stages to sea level. A close watch must be maintained on the overside discharge, with a deck floodlight or portable explosion-proof light being trained on the discharge during hours of darkness. If there are any indications of discolouration or sheen, discharge must be suspended and an investigation must be carried out. If there is any doubt as to the quality of the segregated ballast, all discharge will be made into the shore reception facilities.

Dirty Ballast: All ballast contained in any compartment or tank used for the carriage of oil will be classed as dirty no matter how clean the ballast may appear to be. No ballast carried in cargo tanks may be discharged at sea or in port.

After the connection of the loading arms has been completed and the suitable valves between the arms and the ballast reception have been opened, permission to commence discharge will be given to the responsible tanker officer by the berth operator who will have received approval from the Operations Control Centre (OCC).

Contact between the tanker and the terminal will be by means of the UHF radio that will be placed on board by the Supervisor. As during all transfer operations, there will be a continuous watch near the ship's manifold. In the event of an emergency on the berth, pressing of the emergency alarm will activate the valve closing mechanism.

On hearing this signal, the Crew member at the manifold must stop the ship's ballast pumps to avoid damage by pumping against a closed valve system ashore. (See Emergency Procedures.) On commencing discharge of dirty ballast and at frequent intervals during the discharge, a watch will be kept on the area around the sea valves even though the sea valves have been inspected during the initial safety checks and a seal has been placed on them by the inspecting Terminal Marine Supervisor. Any indications of any oily sheen will necessitate a shutdown of the discharge pumps and an investigation to be carried out before any further ballast can be discharged. Thirty minutes before completion of discharge, the responsible tanker officer will inform the berth operator who will in turn advise the OCC and the duty Terminal Marine Supervisor.

On completion of the discharge and after pumps have been stopped, the loading arm(s) used for dirty ballast discharge must be drained back into the slop tank. On vessels with an inert gas system, gauging will be taken by way of the deck purge pipes to determine that tanks are empty. It is not intended that vessels will depressure cargo tanks for visual inspections, nor should tank lids be opened on any compartment that is not gas free.

All safety regulations applicable during the loading of oil will also apply during the discharge of ballast.

Governmental Ballast Discharge Requirements:

State of Alaska: The State of Alaska requires that the Master of a vessel scheduled to take on any petroleum product or cargo, complete and sign the State of Alaska Department of Environmental Conservation Ballast Water Discharge Certificate Affidavit. To support this affidavit, the Master must be prepared to produce both deck and engine room log books and a legible copy of that portion of the Oil Record Book relevant to the sea passage from last discharge port to the terminal.

BALLAST – continued.

Federal Requirements: Prior to loading oil on any vessel, the terminal is required by the United States Department of the Interior to obtain from the Master of the vessel a legible copy of that part of the Oil Record Book that pertains to the voyage of the vessel to the terminal from the vessel's last oil discharge port. This legible copy shall be certified under oath by the Master as being true and correct. If the vessel is not required to maintain an Oil Record Book or similar records, the Master of the vessel is required to provide the terminal with an affidavit, duly sworn to and signed, stating any and all facts bearing upon any discharge of oil or oily water from the vessel during its voyage to the terminal from its last oil discharge port.

Should the Master be unable to comply with the preceding requirement or if it appears from the Oil Record Book or other documentation that a vessel has discharged oil or oily water during its voyage to the terminal, the terminal is required to promptly notify the Department of the Interior's representative, the Authorised Officer. Tankers discharging ballast water or other oily mixtures may be subject to penalties.

OIL CHARACTERISTICS: The predominent oil to be available at the terminal is currently North Slope crude oil. The following preliminary characteristics of North Slope crude oil are given to acquaint the Master and the cargo officers of tankers that will call at the terminal with the general properties of the cargo they will load.

Specific Gravity: 0.8933 at 60° F.

API Gravity: 27.0° API.

Pour Point: + 15° F.

Viscosity: 73.5 SSU at 100° F., 169 SSU at 60° F.

Reid Vapour Pressure: 4.0-4.5 lbs.

Sulphur Content: 0.94 per cent by weight.

Waxing: 85-117° F. (begins to precipitate). 50-55° F. (bulk of wax begins to come out of solution).

Mercaptan Sulphur: approx. 14 parts per million.

Loading temperature: approx. 100° F.

Dissolved H_2S: less than 0.2 parts per million.

LOADING FACILITIES: *General:* All loading operations will be accomplished in accordance with the joint inspection pre-transfer conference. Loading operations cannot commence until the vessel has complied with all State of Alaska and Federal Requirements and all required documentation has been provided.

Crew Responsibilities: Ship's crews will be responsible for assisting with handling the loading arms on board the tanker, furnishing and making the adaptor connections, removing blind flanges, and guiding the loading arms (Chicksans) to the appropriate manifold connections. However, as a convenience, the shore crew will aid the ship's crew in connecting loading arms to the ship's manifold as the shore crew will be more familiar with the shoreside facility connection. The Chicksan loading arms and couplings are hydraulically controlled by the berth operator who will be in constant voice communication with the individual responsible for the connection by means of the UHF portable radio that will be supplied to all vessels by the Supervisor.

If required, the terminal will supply 10 in. – 16 in. reducers at Berth No. 1 and 12 in. – 16 in. at Berths Nos. 3, 4 and 5.

Checklist Requirements: After the Terminal Marine Supervisor is satisfied that all the safety requirements have been complied with, permission will be given to commence loading. All operations in connection with starting of loading, switching of tanks, and topping off will be the responsibility of the responsible ship's officers.

Before the maximum pressure or loading rates agreed to at the pre-transfer conference are reached, slow loading will be started and the responsible ship's officer will ensure that the cargo is flowing to designated tanks, thus ensuring that all block valves separating lines are open. On completion of this check and after advising the berth operator, the pressure/rate will be increased to the maximum previously agreed by the Master, or the officer in charge.

A responsible member of the crew will remain near the manifold within sight of the berth operator. This is in addition to the officer on cargo watch who, at frequent intervals, will check the state of loading with the berth operator by means of the UHF radio. This officer will also advise the berth operator when changes in the loading rate are required.

The rate of flow into the tanker can be observed on the large digital readout situated by the berth operator's control position.

Loading Suspension: Terminal: Terminal personnel will suspend loading operations if any of the safety rules are not followed, or if terminal personnel supervising loading operations believe any other danger exists, providing adequate notice is given to the responsible ship's officer.

Tanker: The master is required to shut down loading if he feels that shore operations are unsafe, provided adequate advance notice is given to berth personnel.

Emergency Shutdown: In the event of an emergency (See "Emergency Procedures") the following types of shutdown could occur:

(1) "Dangerous" shutdown.
  (a) All berth block valves close.
  (b) Metering upstream block valves close.
  (c) Berth control valves close – one for each loading arm (in 5, 5.5, 6.0, and 6.5 seconds, respectively, to prevent surge to line).
(2) Fire shutdown
  (a) The preceding valve closures plus fire alarm and start fire pumps.
(3) Emergency shutdown, one per arm, closes control valve only.
(4) Low vapour pressure on any crude tank – initiates (1) preceding.

Pushbuttons for (1) preceding are located in berth area plus one on berth operator's alarm panel.

Pushbuttons for (2) 1 on roadway; 1 on roadway at land; 1 in Power Distribution Cabinet (PDC); 1 in Berth Operator Control (BOC) alarm panel; 1 in loading arm area.

Pushbutton for (3) 1 local at each valve.

Topping Off: Near the end of loading when topping off, the responsible ship's officer will request the gradual reduction of loading rate for topping off operations. This reduction will be achieved by the berth operator slowly closing the berth loading valves. The berth operator will progressively reduce the opening of the berth control valves and will take loading arms out of service, until the point when all berth control valves and block valves are finally closed, when advised by the ship's officer "Shut Down" or "Finished Loading". The loading arms will then be drained into a ship's tank.

Disconnecting: On being satisfied that loading arms and ship's manifold are empty, the order will be given from the responsible ship's officer to the berth operator to uncouple the quick release couplings.

During the period of disconnecting, the USCG Vessel Traffic control Centre at Valdez will have been advised. Tugs will be on standby, and providing that there are no other ship movements that would interfere with sailing, the "Early Departure System" will be carried out. The actual Bill of Lading figures will be sent to the master by W/T or Telex after departure.

COMPLETION/DEPARTURE PROCEDURE: *Topping Off:* As the tanker begins the topping off stage, the responsible ship's officer shall notify the berth operator who will in turn keep the OCC informed as the cargo loading rate is reduced. When the ship's officer estimates approximately one hour remains in the loading process, he shall notify the berth operator.

Tug Assistance: After being notified by the tanker that one hour remains in the loading sequence, the berth operator shall notify the OCC and the Terminal Marine Supervisor. The OCC shall continue to monitor the topping off process and the Terminal Marine Supervisor shall place the vessel's pre-arranged tugs on standby. The tugs shall be alongside the vessel after all loading arms have been disconnected and before any mooring lines are let go.

U.S. Coastguard Vessel Traffic Service: The departure of tankers from the terminal shall be in accordance with the published standard operating procedures for the Prince William Sound Vessel Traffic Service. The Coastguard Operations Centre located in Valdez shall be the directing authority for the operation of the vessel traffic service. The Terminal Marine Supervisor will notify the USCG-VTS one hour prior to the completion of loading and again when loading is complete. When the Terminal Marine Supervisor notifies the USCG-VTS that loading is complete, he will verify the tanker's status to enter the Vessel Traffic Service and will check on any inbound vessel traffic.

SAFETY: After the tanker is secured, the Terminal Marine Supervisor will board the tanker to contact the Master or his representative to:

- provide information on terminal safety regulations.
- agree on designated smoking areas
- advise ship's personnel on "Work Permit" and "Hot Work Permit" procedures.
- present ship/shore Safety Check List.
- present printed sheet describing terminal emergency procedures and fire fighting capabilities.

The following are **some** of the safety requirements.

Warning Signs, Lights, and Signals – Upon arrival at the terminal, a tanker shall display the following notice at the gangway:

WARNING
NO OPEN LIGHTS
NO SMOKING
NO VISITORS

During transfer of oil, and when in the non-gas free condition a red signal (flag by day and electric lantern at night) shall be displayed so that it is visible from all sides.

Blowing tubes – Funnel uptakes and boiler tubes will not be blown while a tanker is berthed at the terminal.

Use of Tools – No chipping or other operation likely to produce sparks will be allowed in any designated hazardous area. The Terminal Marine Supervisor and the responsible ship's officer shall both be satisfied that there is no such activity on the vessel or on the facility.

Flashlights, Hand Torches, Lanterns – Only self-contained battery powered flashlights, hand torches, lamps and lanterns, approved by USCG will be permitted to be used aboard the vessel or on the berths.

Main Engine – While berthed at the terminal, the tanker's main engines, steering machinery, and other essential manoeuvring equipment shall be maintained on standby status to permit the tanker to move from the berth on short notice.

Communications Equipment – A tanker's main transmitter shall be turned off and the main transmitting aerials shall be grounded whenever a tanker is alongside a loading berth at the terminal.

VHF-FM radiotelephone equipment, both portable and fixed, may be used as long as the equipment is permanently installed or intrinsically safe, conforms to FCC marine requirements, USCG requirements, and operates with a power and output of 1 watt or less.

The preceding requirements do not mean that essential servicing of ship's radio equipment cannot take place while alongside a berth. However, suitable arrangements for insuring safety during this work shall be made between the tanker and the terminal, including the securing of an appropriate work permit.

Operating and servicing of radar equipment aboard a tanker berthed at the terminal shall be agreed to by the Terminal Marine Superintendent or Marine Supervisor and shall be the subject of an appropriate work permit.

Vessels Alongside – Unauthorised craft shall be prohibited from securing to a berth at which a tanker is moored.

No craft shall come alongside a tanker while the tanker is handling crude oil or deballasting without the permission of the Terminal Marine Superintendent who shall instruct personnel aboard the craft that smoking, naked light, and galley fire regulations must be observed.

Designated Smoking Areas: Smoking shall be strictly prohibited within an area enclosing all tanker berths and loading docks and on board any tanker while at a berth, except.

(a) in buildings or other shore locations specifically approved for smoking and with such approval notices posted.
(b) on board a tanker in places specified by the Master, and agreed to by the Terminal Marine Supervisor.

Places designated for smoking shall not be outside of any of the accommodation areas. Special precautions shall be taken during conditions that may suggest danger; in particular, conditions of no wind or any indication of unusually high gas concentrations.

The Master is responsible for insuring that all on board are informed of the selected places for smoking and for posting suitable notices.

Only safety matches are permitted in approved smoking areas. The use of lighters is prohibited.

Galley Fires and Cooking Appliances – Galley burners are to be adjusted to insure efficient combustion and to prevent galley stack fires and sparks from incandescent soot. Flues are to be cleaned at regular intervals. When bottled gas equipment is used, the gas shall contain an additive which will give it a distinctive odour. Sufficient fire extinguishers shall always be provided near the galley. Oily rags and fat shall not be allowed to accumulate, and the exhaust fan ventilators shall be kept clean.

While a tanker is at a berth, the use of galley stoves and other cooking appliances with non-immersed elements such as electric hot-plates and toasters shall be permitted provided that the Terminal Marine Supervisor agrees that no hazard exists and that such use is in the galley, in the pantry, or in designated smoking areas.

Work Permits – If repairs are to be carried out on a tanker alongside a berth at the terminal, the responsible ship's officer must discuss and obtain agreement from the Terminal Marine Supervisor on the details of the work to be done. Certain types of repairs will be the subject of written work permits which shall be completed by the responsible ship's officer and authorised by the Terminal Marine Supervisor at the time of the pre-loading inspection check list. These types of repairs include but are not limited to:

(a) Repairs to main engine, steering machinery, or other manoeuvring equipment which might immobilise the tanker.
(b) Repairs to tanker's radiotelephone or communications equipment.
(c) Repairs to radar equipment.
(d) Repairs to galley equipment and cooking appliances.

Hot Work Permits – Any hot work done at the terminal, either on the berth or aboard a tanker moored to a berth must be approved by the U.S. Coastguard Captain of the Port, Western Alaska. This approval will be in the form of a signed Hot Work Permit, issued by the U.S. Coastguard.

EMERGENCY PROCEDURES: Fire: The signal for a fire aboard a tanker moored at the terminal shall be 5 prolonged blasts of the ship's whistle or siren supplemented by a continuous sounding of the ship's general alarm. In the event of a fire within the terminal, the tanker shall be notified by the berth operator and, in addition, the terminal fire alarm will also be sounded.

The initial action required of tankers in the event of a fire within the terminal is to prepare for a shutdown of all loading and ballast water discharge arms. This shutdown will be initiated by the terminal and not by the tanker. In case a shutdown does occur, loading and ballast discharge will not be commenced again until the all clear notification has been received from the Terminal Marine Supervisor.

In the event of a fire aboard the tanker or on the loading berth, the initial actions will consist of shutting down all transfer operations. The standby tug, followed by the other tugs, will be dispatched by the OCC to the appropriate berth and the fire water pump shall be started. If necessary, the tanker will be towed off the berth by tugs, using the emergency tow wires. Each berth is equipped with an independent fire water system which includes a 2,000-gallon-per-minute pump and a liquid foam system. Each berth is also equipped with the following fire-fighting equipment:

(a) 2 fixed foam monitors.
(b) 2 fixed firewater monitors.
(c) 5 fire hydrants.
(d) 3 hose reels.
(e) 1 shore to ship firewater connection including 75 ft. of 2.5 in. hose.

Each berth also has the capability to be interconnected with the tugs or with fire trucks to provide increased fire-fighting capacity. The foam system is designed for coverage of fire on the berths only and is not normally interconnected for use by shipboard firefighters in the event of a fire.

Note: Regardless of any assistance the terminal may render, vessels at the berth are expected to put their own emergency procedures into effect whenever required.

Man Overboard: In the event of a man overboard from a tanker moored at the berth, rescue efforts will be implemented immediately, and the berth operator shall be advised by UHF radio. The Terminal Marine Supervisor shall also be notified by the berth operator. The standby tug and mooring boat shall be advised by the berth operator and shall get underway immediately to attempt the rescue.

Life rings will be in position around the loading berth and also on the berthing and mooring dolphins. In case of a man overboard, the medical authorities will also be alerted by the berth operator.

Oil Spills: The notification requirements for an oil spill are delineated by Federal Law. The Federal Water Pollution Control Act (FWPCA) requires persons in charge of vessels (among others) to notify the appropriate federal agency whenever an oil spill enters navigable waters or the adjoining shoreline. The appropriate agency designated to receive these reports is the U.S. Coastguard which can be contacted on Channel 16, VHF-FM.

Notification of an oil spill shall be passed by the tanker to the berth operator who in turn shall inform the Terminal Marine Supervisor.

The terminal will call other agencies that are required to be notified.

The terminal will provide any available containment and cleanup assistance for any oil spill at the terminal. The terminal will activate its oil spill response procedures upon notification of an oil spill and shall utilise all available personnel, equipment, and resources to limit and minimise pollution.

CHARTS/PUBLICATIONS: The following official charts and publications are recommended for study when planning a voyage to Valdez, Alaska and the Terminal:

(a) National Ocean Survey Charts:

Chart Number		*Title*
Old System	*New System*	
8500	531	Gulf of Alaska – Strait of Juan de Fuca to Kodiak Island
8502	16013	Cape St. Elias to Shumagain Islands
8551	16700	Prince William Sound
8520	16709	Prince William Sound – Eastern Entrance
8519	16708	Prince William Sound – Port Fidalgo & Valdez Arm, Valdez.

(b) Nautical Chart Catalogue No. 3 – Alaska
(c) United States Coast Pilot No. 9, Cape Spencer to Beaufort Sea (1964) with current supplement.
(d) Tides Tables, West Coast, North and South America (current year).
(e) Tidal Current Tables, Pacific Coast of North America and Asia (current year).
(f) United States Coastguard Light List, Vol. III, Pacific Coast and Pacific Islands (current year).
(g) Weekly Notice to Mariners published by Defense Mapping Agency Hydrographic Center (DMAHC).
(h) Local Notice to Mariners issued by Commander, Seventeenth Coastguard District, Juneau, Alaska.
(i) Radio Navigational Aids, Pacific and Indian Oceans (Publication No. 117B), published by U.S. Hydrographic Office.

WEATHER: *Wind:* The mountains which surround Port Valdez tend to constrain the flow of air to either an Easterly or Westerly direction. At Valdez Narrows, the predominant directions are Northerly and Southerly.

Jackson Point experiences stronger winds than Valdez Airport; however, light winds (less than 13 m.p.h.) occur about 85 per cent of the time. The prevailing wind directions are S.W. from May through September and N.E. from October through April. The N.E. Winter winds reach gale force but usually do not prevail for long periods. The site is well protected from Southwesterly winds but is fully exposed to the Northeasterlies and to winds coming off Mineral Creek, directly North of the facility, approx. 2.5 miles away across Port Valdez.

The occurrence of winds with speed greater than 19 m.p.h. from any direction is less than 7 per cent throughout the year.

A wind chill factor chart is presented for use in conducting operations during Winter seasons. As indicated, combinations of low temperatures and high winds combine to provide extremely low equivalent temperatures. Outdoor operations under these conditions should be closely supervised to insure that personnel and crewmen do not suffer from exposure or frostbite.

Precipitation: Precipitation is abundant during all seasons with the majority falling during the months July through November. Valdez has an average annual precipitation of 62.37 in. with a mean total of 244.5 in. of snow per year. Greatest snowfall in a 24-hour period was 43 in. in February 1928. Precipitation of an amount in excess of 0.01 in. occurs an average of 170 days per year. Estimate 1 in. rain = 12-15 in. snow.

Temperature: The mean monthly annual temperature is 35.7° F. with recorded extremes of +87° F. (June 1953) and −28° F. (February 1947). The month of January is the coldest with a mean daily minimum of 11° F. and a mean daily maximum of 26° F. The month of July is the warmest with a mean daily minimum and maximum of 45.2° F. and 60.1° F., respectively.

Visibility: Snow or snow with fog are the major causes of reduced visibility during Winter months. At the Valdez Airport, visibilities of 1 mile or less occur 3.7 per cent of the time, annually. Visibilities greater than 5 miles occur 85 per cent of the time.

Tides: The tide at Port Valdez has a diurnal range of 12 ft. and a mean range of 9.7 ft.

Waves: The port is surrounded by mountains and is well protected from the open sea and the wave action within the port is limited to wind-generated waves which are constrained by the fetch available. The maximum calculated wave height is 9.4 ft. from the East with a period of 4.3 seconds. Waves in the order of 6 ft. could occur from the N.W. quarter. An important exception to this is a tsunami or seismically generated wave which can be far in excess of the heights quoted above. Investigations in 1968 showed mean wave heights 3 to 6 ft. in Winter (independent occurence 0.7 per cent of time) and 2 to 3 ft. in Summer (0.1 per cent of time). Berths at the terminal are designed to withstand waves of 12 ft. with a vessel alongside and 20 ft. when vacant.

Ice: Valdez is an ice-free port as far as tanker operation is concerned. Light ice forms along the banks and in the small boat harbour at Valdez, but this has not interfered with small-boat operations.

Currents: It appears that surface currents measured during calm wind conditions in Port Valdez often oscillate with the tide, moving generally in and out of the port with maximum speeds of 0.5 knot. The Easterly (flooding) surface current during a falling tide may or may not persist throughout the year. Although Volume 9 of the U.S. Coast Pilot for Alaskan waters describes the current in Port Valdez as "too weak and variable to be predicted", measurements of surface current speeds typically show maximums of 0.5 to 1.0 knot.

It is requested that inbound tankers keep the OCC advised of weather conditions in the Gulf of Alaska, Prince William Sound, Valdez Arm, and Valdez Narrows in order that accurate information may be passed to outbound tankers.

VISITORS: Access to the terminal is limited to terminal personnel, authorised governmental personnel and authorised visitors with valid reasons for entry onto the terminal site.

Visitors to the Valdez Marine Terminal are requested to make arrangements through the Administrative Office in advance of their arrival at the Terminal. Authorised visitors shall be met at the main gate, which provides the only land access to the Terminal and is located at the East end of the Terminal site, and shall be escorted through the Terminal area. All persons passing through the main gate shall sign in and out with the guard. Any visitor who arrives at the main gate outside normal working hours of the Administrative Office and who has not made prior arrangements shall be turned away and requested to contact the Administrative Office during normal working hours.

The guard at the main gate shall ask any visitor desiring to meet a tanker crewman to wait at the gate until the vessel is called and arrangements have been made to meet the visitor.

Small boats and other vessel traffic will not be permitted to dock at the terminal site without the approval of the Terminal Marine Supervisor. Only taxicabs with valid passes will be permitted to enter the Terminal site, and any private or commercial vehicles that are permitted in the terminal area will be subject to inspection on entering and departing the area.

SHORE LEAVE: If tanker personnel return to the Valdez Marine Terminal site in such a condition that they might require assistance to insure their safe return to the ship, they shall remain at the main gate until the guard grants them admittance. Should an escort be required, it will be provided by vessel personnel.

All tanker personnel transiting the Terminal area will be required to carry their United States Merchant Mariner's Document (USMMD) and company identification of tanker owner for identification. These documents shall be presented to the guard at the main gate whenever tanker personnel enter or leave the Terminal site. Should a crewman present himself without these documents, he will be detained and the Master will be called to resolve the matter.

TIME: Alaska Standard Time (150th West meridian) for a zone description of +9(ZD=+9). Local time is modified from the last Sunday in April to the last Sunday in October by the use of Daylight Saving Time for a zone description of +8 (ZD = +8) for Alaska Daylight Saving Time. This time is 1 hour behind that in Seattle and California and 4 hours behind New York.

To avoid confusion, all communications regarding sailing times, sailing dates, arrival times, arrival dates, etc. are to be quoted in Alaska Local Time.

FRESH WATER: Only in cases of extreme emergency can potable water be supplied and in a very limited quantity.

FUEL: Not available.

POLLUTION: U.S. Federal Pollution Prevention Regulations and Federal Water Pollution Control Act to be strictly observed.

TELEPHONES: Pay telephones will be located in the vicinity of each loading berth for the use of ship's personnel.

Telephones will not be placed aboard tankships calling at the terminal.

AGENCY: Alyeska Pipeline Service Company will not act as Agent for tankers calling at the Valdez Marine Terminal. Any requirements for such services as ship chandler, etc. must be obtained through the Owner's appointed ship's Agent. For security, the Valdez Marine Terminal must be notified of the appointed Agent.

AUTHORITY: Alyeska Pipeline Service Company, Valdez Terminal, P.O.Box 300, Valdez, Alaska 99686. *Tel:* (907) 835-2261. *Telex:* 26564. *Contact:* Captain James K. Woodle, Marine Superintendent/Port Captain. *Tel:* (907) 835-6526 or after hours (907) 835-2606.

VANCOUVER, Washington: 45.36 N. 122.40 W.

(See Plan)

DOCUMENTS: 3 copies of following:
Cargo Manifest.
Store List.
Crew Cargo List.
Crew List.
One copy of following:
Clearance from last Port.
Tonnage Tax Certificate.
Copy of Vessel register and itinerary of vessel port by port.

PILOTAGE: See "General-Pilotage" before first U.S.A. port (Albany).

ANCHORAGES: Only designated anchorages on U.S. Coast and Geodetic Charts are at Tongue Point (Astoria), Oreg. 2 in number and designated on Chart 6151 Columbia River, Pacific Ocean to Harrington Point, as 1 Lower Tongue Point and 2 Upper Tongue Point. Additional locations on Columbia and Willamette Rivers where safe anchorages can be made upon advice of Columbia River Pilots. Anchorage in Vancouver harbour by permission of Harbour Master.

RESTRICTIONS: No restrictions on night entry. State of tide and draft restrictions not applicable to vessels drawing less than 40 ft.

MAX. SIZE: No restrictions length and breadth. Depth at Columbia River entry 48 ft. River channel to Vancouver maintained at 45 ft. by 600 ft. Seasonal tidal effect up to 3 ft. at Vancouver.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Seattle Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Route ETA cables through KBLITT Seattle, Wash.

TUGS: Normally join vessel at designated berth. Tug lines used at no charge.

BERTHING: No special requirements for berthing and no special arrival times required except under particular circumstances.

4 berths. Total length 2,535 ft. Ro/Ro facilities available.

BULK HANDLING FACILITIES: The grain terminal, owned by the Port and operated by the United Grain Corporation, has about 1,000 ft. (305 m.) of dock available. The 7 vessel spouts load 1 vessel at a time at a combined loading rate of 40,000 bushels per hour. The grain terminal can off-load at 18,000 bushels per hour, and they have a storage capacity for 4,500,000 bushels.

EQUIPMENT: The Port of Vancouver has 3 Whirley cranes, 1 of which is rated at 50 short tons at 60 ft. (18 m.) and 15 short tons at 130 ft. (40 m.) the other 2 Whirley cranes have a capacity of 34 short tons at 60 ft. (18 m.) and 10 short tons at 130 ft. (40 m.). These 3 travelling gantry or Whirley cranes operate on parallel tracks on the face of the dock in conjunction with the double direct transfer tracks.

Bulk materials make up a sizeable portion of the Port's traffic, and consequently, large crane buckets are available for handling these cargoes. In addition, the Port has a special crane bucket for the successful handling of zirconium – a very fine sand material considered a "problem" commodity for efficient and waste-free handling.

The Port maintains a full complement of support equipment. They have 42 lift trucks with 2 – 3.5 ton capacities, 9 lift trucks with 7.5 – 15 ton capacities, 1 lift truck with a 26 ton capacity, along with various straddle-carriers, conveyors, front-end loaders, jitneys – and a range of special attachments and gear for all their equipment (such as prong-lifts for steel coils, grabs and squeezers for paper rolls, push-pull slip sheets for bag goods, cartons and boxes) to handle any special situations or problem with which they might be confronted.

STEVEDORES: Allocation for gangs Mondays through Saturday must be confirmed at 1100 hrs. to the longshore hiring hall. Allocation for gangs Sunday and Monday are made at 1100 hrs. Saturday for both day and night gangs. Same procedure applies to allocation of night gangs, but night gangs may be cancelled by 1400 hrs. afternoon of night gangs are to work.

MEDICAL: Any type of medical treatment can be provided and hospital facilities available.

TANKERS: 1 berth. 3 × 6 in. pipe-lines to 21 tanks. Storage capacity 85,800 bbls.

DENSITY: Fresh water at all times.

FRESH WATER: Available at all berths delivered through pier-side connections.

FUEL: Viscosity grades of B and lower. No advance notice required. Barging essential.

FIRE PRECAUTIONS: Port fire precautions respecting tankers are administered by U.S. Coastguard, which enforces shipboard regulations under Code of Federal Regulations, Part 46, Sub-part D, Sections 20 to 40; Police Harbour Patrol, which controls port movements, boards vessels to warn Master regarding harbour regulations, including spilling of oil, etc.; and Fire Marshal, who exercises jurisdiction regarding fire regulations at shoreside facilities serving tankers.

GANGWAY/DECK WATCHMEN: Services at option of vessel Owner/Agent and available through private firms.

OPENING/CLOSING HATCHES: While ship is at dock, opening and closing hatches is work of longshoremen. Ship may open or close own hatches while under way.

CERTIFICATES: Registered tonnage certificate.

CUSTOMS ALLOWANCES: Tobacco, reasonable quantity. Wine and/or Spirit, reasonable quantity.

CARGO GEAR: Valid cargo gear certificate required, acceptable to U.S. Bureau of Labor Standards.

IDENTIFICATION CARDS: Immigration Dept. requires forms No. 595 and No. 31 (Repatriation). Changes can be effected at any U.S. Consulate and are honoured here.

CONSULS:
Austria
Belgium
Costa Rica
Denmark
Dominican Republic
El Salvador
Finland
France
Federal Republic of Germany
Great Britain
Iceland
Italy
Japan
Lebanon
Mexico
The Netherlands
Norway
Republic of Panama
Peru
Sweden
Venezuela

REPAIRS: All types of deck and engine repairs possible.

DRY DOCKS: See "Portland, Oregon".

REPATRIATION: Any arrangements possible for crew changes or other repatriation.

AIRPORT: Airport 10 miles from town, served by 7 regularly scheduled airlines with direct service and/or connections domestically and world-wide.

TIME: GMT minus 8 hours. Daylight saving time becomes effective annually on last Sunday in April through last Saturday in October.

HOLIDAYS: Following holidays are recognised: *New Year's Day; Lincoln's Birthday (Feb. 12th); Washington's Birthday (Feb. 22nd); Memorial Day (May 30th); *Independence Day (July 4th); *Labour Day (1st Monday in September); Columbus Day (Oct. 12th); Veteran's Day (Nov. 11th); Thanksgiving Day; *Christmas Day (Dec. 25th); Statewide Election Days. Other legal holidays may be proclaimed by State or national authority. When holiday falls on Sunday, following Monday observed as holiday. Longshore work performed on any of above-listed days is at overtime, which is one-and-a-half time rate. Days marked(*) are stop-work days, viz., no ships will be worked. This also applies to July 5th, which observed locally on unilateral basis.

POLICE/AMBULANCE/FIRE: Police Tel: 693-2555; Fire Tel: 693-1441; Ambulance provided by several private firms, but can be obtained through police or fire number.

SERVICES: All services available such as compass adjusting, major or minor repairs either with work barges or at ship repair berths; lay berths available; charts available from private companies; all chandlery supplies available.

SHORE LEAVE: Crew members permitted ashore except where vessel has made first arrival from Communist-controlled port.

AUTHORITY: Port of Vancouver, P.O.Box 1180, 3103, Lower River Road, Vancouver, Washington 98666. *Tel:* (206) 693-3611. *Telex:* TWX 910-474-8673. *Contact:* Bewson Murphy, Executive Director.

WHITTIER, Alaska: 60.47 N. 148.40 W.

SHIPMASTER'S REPORT: October 1980. (Updated 1984).

GENERAL: Whittier is a small port in position Lat. 60° 47′ N., Long.148° 40′ W. The population in October 1984 was 250. There are 2 hotels, 3 grocery stores, a school and a post office. The port was constructed between 1941 to 1943. It was developed as a main supply depot for the storage of oil for the Anchorage area and also as a transhipment port for produce from other areas in the United States. There is regular barge traffic from Seattle and other West coast ports with ammunition, food, merchandise and motor cars. All these are carried aboard flat top railway wagons which can be loaded or discharged at any state of the tide. The port is operated by the Alaska Railroad system and there is no shore gear of any kind. Whittier is surrounded by very high mountains and there is no road or footpath in or out. There is a very short landing strip suitable for small aircraft but the normal communication is by rail which goes under the mountains in two long tunnels. The journey takes about 1.5 hours and the timetable is frequent in the Summer when a lot of people visit Whittier for boating and fishing or to get the ferry to Valdez. During Winter however the service is about four times a week, weather permitting.

APPROACHES: *Recommended Route to Whittier Pilot:* British Charts BA. 3363 and 3364.

When Smith Island bears 256°×8 miles, vessels should leave the traffic zone and steer 277° passing 1.5 miles South of Naked Island and 1.2 miles North of Point Eleanor. Then alter course to 281° passing 1 mile South of Mears Point. After passing Mears Point, steer 350° through Ferry Passage and alter to 280° off Point Culrose Light to the pilot station. It is not locally recommended to pass North of Perry Island through the Dutch Group.

PILOTAGE: Pilotage is operated by the Southwest Alaska Pilots' Association who have an office in Valdez, telephone number (907) 835 – 2134. They also have an office in Homer, telephone (907) 235 – 8783. Both stations maintain a continuous watch on Channels 10 and 16.

In theory, Pilots embark at Hinchinbrook Entrance. This has not been the practice however, for the last year or so, due to the long sea passage for the small pilot boat and the severe weather sometimes encountered in this area. Pilots normally embark at Blight Reef near Glacier Island. The pilot boat is stationed at Rocky Point some 10 miles away. The normal pilot boat is "Bering" which is a 63 ft. long trawler, capable of 10 knots, with a blue hull and white house. A newer boat is also in attendance. This is a 43 ft. glass fibre boat called "Bernhof" capable of 20 knots. She has a white hull.

No vessel may enter Prince William Sound through the Hinchinbrook Entrance without permission from the Coastguard at the Valdez Traffic Control Centre on Channel 13 or 16. Large vessels may only transit Prince William Sound in daylight hours.

If permission is obtained, vessels may proceed direct to the pilot station at Whittier, 1 mile South of Point Pigot. See "Approaches".

ANCHORAGE: Anchorage off Whittier may be obtained in 12 fathoms at Pigot Bay (Lat. 60° 50.4′ N., Long. 148° 22.0′ E.).

BERTHS/FACILITIES: The 2 railway berths are only for barges carrying flat top railway cars on which all cargo is carried. The Delong Pier is used for oil tankers. The length of the wharf is 140 m. and the maximum length of ship is about 170 m. The minimum depth alongside is 48 ft. at the West end and 80 ft. at the East end.

Tankers normally berth port side alongside. In October 1980 there was one tug "Avenger" in attendance being 2,000 h.p. A shore gangway is supplied. All manifold connections are 6 in. The ship must supply all reducers. 2 lines are used for kerosene. Jet fuel, Mogas and diesel are imported. The distance to the shore tanks is 1.5 miles. All products are pumped from the storage area to Anchorage. Bunkers are not available for large ships. Provisions and supplies can be purchased in Anchorage and shipped down by rail. There is a small clinic with a physician's assistant. The nearest doctor or dentist is in Anchorage. In an emergency there is an ambulance which can run on the road or rails.

GENERAL:

Weather: The winds are very strong and variable. It is very wet in Summer and has an extremely high snowfall in the Winter months. The port is completely ice free the whole year round.

Formalities: All the usual American forms apply. Customs, Immigration and Coastguard all come from Anchorage as there are no officials at Whittier.

Joining/Leaving: Crew may sign on and off at all times. During Winter Whittier is often cut off by snow.

Accommodation: Pilot and Agent stayed aboard throughout our 36 hour stay which proved very convenient for clearance and paperwork.

Agent: North Star Terminal & Stevedoring Company, Anchorage, Alaska 95510. Cable: "Norstevco Anchorage". Telex: 26471.

AUTHORITY: Whittier Harbour, P.O.Box 608, Whittier, Alaska 99693. *Tel:* (907) 472-2330. *Contact:* Patrick Johnson, Harbour Master.

WILMINGTON, Delaware: 39.44 N. 75.32 W. (See Plan)

DOCUMENTS: Handled through local Agents.

PILOTAGE: See "Philadelphia".

ANCHORAGE: At Cherry Island.

MAX. SIZE: Length unlimited, breadth unlimited, draft 35 ft. MLW tide range 5.5 ft.

Chesapeake/Delaware Canal: Max. LOA 760 ft. Max. draft 35 ft. (FW). Height of mast 133 ft. Max. beam 170 ft.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Washington, D.C. Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: U.S. Coast Guard, Gloucester, N.J.

TUGS: Available through Wilmington Launch Service Tel: 652-1666.

BERTHING: 3,260 ft. marginal wharf. 20 – 100 ton crane capacity. 400 – 600 t.p.h. bulk unloader. Covered bulk storage of 472,000 sq.ft. Dockside freezer capacity of 1,050,000 cu.ft. at present.

Multi-purpose bulk/container crane available, capacity 40 tons, outreach 115 ft.

Roll-on/roll-off cargoes handled.

DENSITY: Fresh water port. Normal 12 hour tides.

FRESH WATER: Hose connection from dock.

FUEL: Available.

GANGWAY/DECK WATCHMEN: Required.

OPENING/CLOSING HATCHES: Optional.

IDENTIFICATION CARDS: See "New York".

CONSULS: All Consuls are located in Philadelphia, Pa.

REPAIRS: Possible.

DRY DOCKS: Major repairs and dry dock facilities – Penn Ship Yard, Chester, Pa.

REPATRIATION: Facilities are available and arranged by Agent.

AIRPORT: Philadelphia International Airport, regular service.

TIME: U.S. Eastern Standard (GMT minus 5 hours) and Daylight Time.

POLICE/AMBULANCE/FIRE: Police, Ambulance, Fire, Tel: 302-654-5151.

TELEPHONES: Dock-side pay phones.

SERVICES: All services available.

SHORE LEAVE: Allowed unless restricted by Immigration.

DEVELOPMENTS: Container berth of 900 ft. length to be completed 1989.

AUTHORITY: Port of Wilmington, P.O.Box 1191, Wilmington, Delaware 19899. *Tel:* (302) 571-4600. *Telex:* TWX 510-666-2181. *Contact:* Kenneth H. Mack, Port Director. John B. O'Donnell, Director of Trade Development.

WILMINGTON, N. Carolina: 34.14 N. 77.57 W. (See Plan)

PORT LIMITS: A ship is considered an "arrived vessel" upon arrival at Buoy 2CF.

DOCUMENTS:

3 copies Cargo Manifest (Forms 1302), the original showing all cargo on board, and 2 copies showing only cargo for this port.
3 copies Crew Manifest (curio list) (Customs Form 1304).
3 copies Stores List (Customs Form 1303).
3 copies Passenger List (Form I-418).
3 copies Crew List (Form. I-418).

Customs Boarding Officer will also examine ship's Register and Loadline Certificate. In addition, the following documents will be required for formal entry to be made within 48 hours of arrival from abroad, or 24 hours from arrival from a United States port:

Master's oath (Customs Form 1300).
All foreign clearances.
U.S. Certificates of payment of tonnage tax (Customs Form 1002).
Certified Crew List.
Oil Pollution Certificate.
General Declaration (Customs Form 1301).
Load Line Certificate.
Safety Equipment Certificate.

PILOTAGE: Pilots board vessels at Buoy "2CF" off the mouth of the Cape Fear River. Masters should notify local Agents by radio of their ETA at Buoy "2CF" in order that the Pilots may be on station in advance of arrival. Additionally, Masters may communicate with Pilots by radio telephone on 2738 frequency and by VHF Channel 18A. Pilots remain on board until harbour limits of Wilmington, where docking Masters normally board vessels for purposes of docking.

APPROACHES: The port terminal at Wilmington is located on the East bank of Cape Fear River, approximately 26 miles from the sea buoy at the mouth of the river. Wilmington is 150 miles S.W. of Cape Hatteras and 26 miles North of Cape Fear.

RESTRICTIONS: The approach channel and basins adjacent to the port are maintained at a depth of 38 ft. MLW.

ANCHORAGE: Vessels awaiting Pilots normally anchor in area off Buoy "2CF". There is no safe anchorage in the port of Wilmington for large vessels to be accommodated. Small vessels can be accommodated for brief periods in anchorage basin, although it is necessary to swing with the tide in order to avoid blocking channel.

MAX. SIZE: No limits on length, breadth, and draft limit is present channel project depth of 38 ft. Master should communicate with local Agent regarding stage of tide for passage of vessels drawing 34 ft. or above.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Washington, D.C. Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
TUGS: 2 towing companies operate at Wilmington.
BERTHING: A continuous marginal wharf, 6,000 ft. long. Docking at any hour, day and night.
SPECIALISED CARGO HANDLING FACILITIES: State Port Terminal: Fully equipped to serve cellular type container ships, for bulk handling; equipped with 6 yard rehandler buckets, receiving hoppers, and paved open storage areas, 2×45 ton, 1×115 ton, 3×40 ton container cranes, 1×140 ton mobile crane and 1×225 ton gantry crane; 1 berth with tank farm for handling liquid chemicals.

Almont Shipping Company: 3 berths, open and covered bulk storage, 2×25 ton cranes and 1×85 ton derrick. No facilities for LPG carriers.
TANKERS: 10 tanker berths with drafts from 30 ft. to 40 ft. MLW. Night berthing at all berths. Fresh water available.
FRESH WATER: Available from shore connections at rates up to 50 t.p.h.
FUEL: Bunker "C" and diesel fuels available locally.
FIRE PRECAUTIONS: Normal precautions observed.
REPAIRS: Minor ship repairs available.
DRY DOCKS: 1×1,000 ton lift floating dry dock.
AIRPORT: New Hanover Country Airport, 7 miles from N.C. State Port Terminal. Served by Piedmont Airlines.
IDENTIFICATION CARDS: Standard U.S. Immigration Forms I-95 to be made up for each crew member on arrival. Not necessary for crew man already holding Form I-95, issued for the same vessel.
TIME: Eastern Standard Time, GMT minus 5 hours. Daylight Saving Time, GMT minus 4 hours from April to October.
DEVELOPMENTS: A 900 ft. extension to the South end of the wharf is under design for an addition to the container terminal. Completion of construction is anticipated by 1988.
AUTHORITY: North Carolina State Port Authority, 2202 Burnett Boulevard, P.O.Box 9002, Wilmington, North Carolina 28402. *Tel:* (919) 763-1621. *Telex:* 510-937-0330. *Contact:* Philip Jonees, Port Manager. W. T. Stover, Manager – Communications.

AGENT: Harrington Ship Agencies, Maritime Trade Center, 2128 Burnett Road, Suite 5, P.O.Box 308, Wilmington, NC 28402. Tel: (919) 762-0345. Telex: 801254. TWX: 510-937-0336.

WRANGELL, Alaska: 56.28 N. 132.22 W. (See Plan)

Located on Wrangell Island. Open all year.
DOCUMENTS: See "Anchorage, Alaska".
PILOTAGE: (From sea via Dixon Entrance up Clarence Strait to Guard Island.) Under pilotage from Guard Island.
ANCHORAGE: Good anchorage N.E. of Woronofski Island in 22 fathoms of water.
MAX. SIZE: Harbour depth 32 ft. MLLW. Tides: mean range 13.7 ft., diurnal range 16.1 ft. Also see "Berthing".
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Anchorage Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
CUSTOMS: Immigration, Guard Island or local Customs Office. Quarantine and Customs, local.
TUGS: 9 tugs up to 1,800 h.p. available with sufficient notice.
BERTHING: 4 wharves.

1. Wrangell Lumber Co. Dock: Berthing length 320 ft., 150 ft. wide, depth South end 32 ft. North end 40 ft. LW. Height of pier from zero tide 23.5 ft. Crane – 1 mobile, 8 ton, 6 lift-trucks. No shed space. 3 acres open storage.
2. Alaska Wood Products: Berthing length 300 ft., 50 ft. wide. Depth at LW 32 ft. Height of pier from zero tide 23 ft. No shed space.
3. Port of Wrangell Wharf: 35 ft. depth at both ends. Fresh water available. Lift trucks on rental from local private firms. Dock face 400 ft. with additional mooring dolphins for a total overall length of 700 ft.
4. Barge: Transfer bridge facilities, 17 ft. wide, capable of up to 70 tons (140,000 lbs.).

STEVEDORES: 4 gangs available.
REPAIRS: None.
WATER: Available.
FUEL: Small quantities available.
MEDICAL: Small but new hospital.
TRANSPORTATION: Air and ferry.
AUTHORITY: City of Wrangell, P.O.Box 531, Wrangell, Alaska 99929. *Tel:* 907-874-3736. *Contact:* Ronald O. Phillips.

YORKTOWN, Virginia: 37.14 N. 76.30 W. (See Plan)

OPERATOR'S REPORT: 1981.
GENERAL: The American Oil Terminal at Yorktown, Virginia is located about 3 miles below the York River bridge on the South side of the river approximately 38 miles from the Chesapeake Bay Sea Buoy "CB". Co-ordinates of the terminal are Lat. 37° 13′ 37″ N., Long. 75° 26′ 23″ W. A 3,000 ft. finger pier ending with a marginal pier, reaches the deepwater channel in the river. Tankers supply the refinery with crude and intermediate feedstocks which are refined into gasolines, fuel oil, liquefied petroleum gas, coke, and liquid sulphur which is distributed by barges and tankers.
PILOTAGE: Pilots board 1.5 miles N.E. of Cape Henry Light. Vessels should use traffic lanes as outlined on Chart No. 12221 when approaching the pilot area.

U.S. flag should call the Chesapeake Federal pilot boat approximately 1 hour before arrival to arrange Pilot embarkation. Non-U.S. flag vessels should call the Virginia State pilot boat 1 hour before arrival.
APPROACHES: *Cautionary Advice:* RDF stations at Chesapeake Light and Cape Henry provide coverage for position fixing and numerous buoys mark the fairways, channels and obstructions. While proceeding to the pilot station one should be aware of the heavy traffic in this area and the ship should stay within the prescribed traffic lane. Careful consideration should be given to the current, which has a velocity of up to 3.0 knots and higher and which tends to set a vessel out of the channel.
ANCHORAGES: *Anchorage and Lightering:* Vessels requiring lightering proceed to Hampton Roads where all lightering operations are conducted. This channel is well marked and presents no difficulties. Upon completion of lightering, the vessel must return to Cape Henry before proceeding to the berth. The bottom of Hampton Roads consists of soft mud and provides good holding ground.
RADIO: ETA messages should be sent to Agent 72, 48 and 24 hours before arrival. Any change in ETA should also be transmitted, as the pilot vessel is not continually on station. Advise draft (brackish water) in first message.
VHF:

Pilots	Channels 6, 11, 13, 16, 19A
Tugs	Channels 9, 10, 12, 13, 16
U.S.C.G.	Channel 16
Marine Operators – Norfolk	Channels 16, 22, 27

BERTHING: The Docking Master boards the vessel from a tug 1 – 2 miles East of the Amoco Dock. 2 tugs are generally used for docking; vessels over 28,000 d.w.t. may require 3 tugs at the Docking Master's discretion. The vessel makes a normal marginal approach to No. 1 Dock with the tugs breasting the vessel alongside and holding it there until secured. Vessels generally dock port side to at No. 1 Berth. No. 2 Berth is of new construction and is located 1,122 ft. to the West of No. 1 Berth. When docking at No. 2 Berth, vessels approach No. 1 Dock on a Southwesterly heading to initially avoid a shoal area located N.N.W. of No. 2 Berth. When the vessel is within 550 ft. of No. 2 Berth, the approach is made parallel to the dock face until the vessel is off the dock when it is breasted into position port side to by the tugs. Extra caution must be exercised when approaching No. 2 Dock when there is a ship at No. 1 Dock. At No. 2 Dock, difficulties will be experienced in placing vessel's gangway due to the extremely limited dock space amidships.

The berth is equipped with 12 in. Chicksan arms for crude discharge and 10 in. hoses for product loading. Weather conditions are carefully monitored by terminal personnel, and vessels are shut down when conditions warrant such action.
FRESH WATER: Available.
FUEL: Available.

NOTES

Please also advise Shipping Guides Ltd.

Uruguay

GENERAL:

REGULATIONS: Increased fines became effective in June 1973 in respect of infringements of the Uruguayan Marine Code. There are approximately 119 Articles to the Marine Code, and Owners and Masters of vessels proceeding to Uruguayan ports are recommended to obtain a copy of the Code (which lists port regulations and amounts of fines for infringements, maximum fine being 760 U.R.) prior to arrival. We understand that copies of the Code, entitled "Reglamento Preventivo y Represivo de Infracciones Maritimas, Fluviales y Portuarias", may be obtained from Centro Navegacion Transatlantica, Colon 1486 p. 3, Montevideo.

Freely translated, we give below some extracts of Port Regulations as specifically applicable to Montevideo, but also to all Uruguayan ports in general:

Articles 1 to 8 cover respectively the reasons for setting up this preventive set of regulations; the definition of what a vessel is in terms of the legislation; the establishment and amount of fines (they may be tripled in the event of repeated offences); the fact that very small vessels may only have imposed 10 per cent of the full fine; the jurisdiction for the regulations covering the whole of the Uruguayan coast and river frontage; the stipulation whereby the General Marine Prefecture must send to the Master of the vessel a statement of the offence immediately it is observed and this in triplicate and to the local Agent for the vessel.

The actual information which the form must contain is delineated. Notification of offences can be made after a vessel has sailed, this being to the local ship's Agent by phone and confirmed within 24 hours in writing. All Masters must give written consent to their local Agent, and the Agent must accept this in writing, empowering the Agent to act in the Master's name in all cases of fine payment. The Authorities may delay the sailing of a vessel if they see fit in connection with any offence. Finally, article 8 deals with the right to appeal to the General Marine Prefecture against any fine imposed, this having to be done within 10 days dating from day following personal notification of the offence.

Articles 9 to 119 cover the specific offences subject to fine and indicate individually the full fine imposable in local pesos.

An abridged summary of each of the articles is as follows: No anchoring within 900 m. of the illuminated buoy in the port access channel.

Vessels carrying hazardous cargo must hoist flags according to the International Code of Signals.

Vessels with anyone on board with contagious diseases must hoist appropriate flag (letters "QL").

Flag "Q" must be hoisted and maintained in position until Health Authority has given Free Pratique.

All vessels anchoring in the roads, bay or ante-port must take due precautions not to harm or cause damage to other vessels; the fine will be imposed notwithstanding claims for damages from third parties.

Agents of vessels which may wish to anchor in the Roads must obtain prior permission from the Marine Authority, specifying vessel's measurements and the reason. If authorised, the anchorage to be used will be notified.

No anchoring at the docks unless justified, and anchors must be raised immediately the reason for dropping them has gone. There must be no delay on the part of vessels in complying with the Marine Authorities instructions to change berth or anchorage.

No tying up to other vessels without Marine Authority permission; no attachment to berths which have not been allocated and no changing of berth without authorisation.

No anchoring in places not authorised by the Marine Authority, the maximum fine being applied should this have caused damage to third parties.

No small craft to be tied up obstructing gangway or quays. Where this is necessary for embarking crew members, passengers, provisions, etc., the small craft must be removed immediately the operation has been completed.

Small craft must not be tied up to buoys or beacons. Vessels must not tie up at buoys or beacons.

Maximum speed of vessels in docks is 4 knots.

Navigation in channels of access to ports is governed as follows:

Maximum speed 8 knots.

Vessels must always keep to starboard.

Vessels must not overtake each other, but where this is necessary they must conform to the International Colregs.

No anchorage in channels.

No fishing in channels.

Vessels navigating in channels must keep a distance of 1,000 m. from each other.

Vessels must not cross in front of each other in the fore-ports.

All vessels entering or leaving the ante-port or docks, changing berths or anchorages must be assisted by a Pilot and tug, unless specifically given exception to this rule by the Marine Authority.

No vessel must enter port with damage to hull, machinery or rudder unless prior inspected by the Technical Commission of the Mercantile Marine Directorate.

Any vessel springing a leak whilst navigating in the access channel, and which the bilge pumps cannot overcome, must go aground as quickly as possible outside the channel so as to leave the channel open.

In case of fire on board whilst navigating in the access channel, Masters must observe usual procedure and give signals accordingly.

The strict use of semaphore signals within port must be observed.

When vessels enter the docks or remain in them, Masters, owners or Agents must request permission from the Marine Traffic Office, and report to the Office of Pilotage, and proceed in whatever form they may instruct. On leaving the same procedure must be followed.

Masters and owners of vessels must see that their vessels do not obstruct or cause harm to port works, beacons, buoys, or semaphores and once tied up they must not slacken ropes without permission of the Marine Authority except under conditions covered by items 1, 2 and 3 of Article 64 of the Port of Montevideo Marine Regulations.

No vessel to have badly stowed cargo, excess weight, or evidence of lists due to bad trimming of cargo.

Only those lines necessary for tying up to be used. When 2 or more vessels tie up alongside to load or discharge they are all obligated to ensure that the handling of their respective cargoes does not prejudice the working of the others.

Vessels must take proper precautions when loading or discharging raw material, i.e. sand, bones, ash, coal, etc., by placing suitable planks of wood close together to prevent any such material falling into the water.

No vessel to enter docks with the gangway already rigged.

During unloading operations, no goods to be thrown on to the quay. This must be done manually or mechanically.

During discharge operations, cargo must be so positioned on the quay as to leave adequate passage for vehicular traffic, i.e. Police, Fire Brigade, Health Authorities, Customs and Port Officials.

Planks of wood — when planks are used for any operation, they must not be placed in contact with mooring bitts or cables. When work ceases all pieces of wood, ladders, small trucks, etc, must be removed from quay, and those belonging to the ship must be taken on board, this so as not to obstruct the public path along the quay.

When cleaning or washing ships tied up at quays, no rubbish, water or cleaning material must be allowed to fall on the quay.

A very serious offence is the throwing into the water of any rubbish, sewage or other material susceptible to polluting the water.

Very serious offences are the lightening of ships carrying petrol, crude oil, or the like, likewise the washing-out of tanks, except in authorised zones. The fine is based on the area spoiled by the wrongful discharge.

All ships should have local Agents, otherwise in the case of offences the Master is held responsible and vessels may be detained.

Vessels are responsible to ensure that no damage is made to quay installations by the cargo they load or discharge, and must always leave berths in a tidy and clean state.

Vessels' auxiliary small craft, launches and the like must not hang over the side of the vessel in port, except during operations of launching and reshipping on board, where such operations are conducted at points indicated by the Marine Authority. Such small craft may only be used for the purpose and at the times authorised by the Marine Authority.

Usual regulations concerning carriage of passengers in vessels and heavy fines are imposable for the carriage of passengers or crew members not listed.

Vessels exceeding their navigation limits shown in their Certificate of Navigability are subject to fine.

All vessels must be cleared to sail by the Marine Authority.

Vessels must use their proper name and this must be painted on in letters of minimum of 15 centimetres height and 8 centimetres wide. Letters must be white on black or black on light colour.

Masters, Owners and Agents must report any crew offence or irregularity on board to the Marine Authority.

Vessels in port must hoist the Uruguayan flag.

N.B. It is recommended that Masters correctly establish the prescribed times for raising and lowering the Uruguayan flag, in order to avoid fines.

Vessels must have their gangway equipped with handrails, and the gangway must be clearly lit at night.

All lines to shore must have rat-guards fitted.

When there are hazardous goods on board or when such goods are being worked, the vessel must hoist the International Code Signal letter "B", and at night show a red light on the bow masthead, must always have engines in a state of readiness in case of danger, keep two-thirds of the crew on board, keep watchmen and firemen available (the number of whom will be determined by the number of holds containing the hazardous material), must only work with incandescent lights, and keep a Port Pilot on board if the Marine Authority so directs.

Vessels moored at quays must not move propellers, except under the direction of the Marine Authority.

Vessels must not moor in the port access channel. There must be no improper use of the International Code Signal. Signal flags must not be interspersed with flags of nationality.

If a vessel wishes to dress flags over all, or fly a flag at halfmast due to a bereavement on board, the Marine Authority's permission must be first obtained.

The use of whistles, sirens or any other audible signal within the area of the roads, bay, ante-port or docks, for any reason other than justifiable for navigation is prohibited.

Any vessel anchored, tied up to other vessels or to the shore or quays, must show a white light from sunset to sunrise which can be seen at a distance of 500 m.

In the access channel to Montevideo, no more than 4 vessels may navigate at one time — 2 entering, 2 leaving.

Maximum speed in the Montevideo ante-port is 6 knots. There must be no anchoring in the Free Zone, reserved for the manoeuvring of vessels entering and leaving.

At Montevideo there must be no anchoring along the route leading from the Free Zone to Channel "A", between the quay and the pier of the same letter. Also on the route leading from Pier "A" along a line to 100 m. to the North of the end of the West Jetty.

No anchoring in any area less than 200 m. from Pier "A" in a semi-circular coverage, taking as middle point a position half way between Quay "A" and Pier "A".

All vessels must keep to the right or to the middle when there are no other vessels in the vicinity.

International Regulations for the Prevention of Collisions apply, plus the following:

Vessels navigating along the routes established in the anteport or which have to pass directly through the passage between Jetties "A" and "B", must keep to the right when another vessel is coming in the opposite direction.

Vessels which have to cross the North, the South route or directly between Jetties "A" and "B", must ensure that they pass any other vessel at a distance not less than 50 m.

Any vessel navigating under her own power must give way to a vessel under tow by a tug.

Vessels with tugs following routes which cross one another, thereby creating a collision risk, the one passing to the starboard of the other is the vessel which must take the precautionary measures to avoid collision. If, however, the risk persists, the vessel passing to port of the other must also take measures to increase the distance between the two vessels.

No vessels to pass in pairs or in opposite direction between Jetties "A" and "B"; the semaphore signals transmitted by Quay "A" must be observed. If the signal is "vessel entering from the ante-port to the docks", the vessel in the docks, ready to sail, must wait until the incoming vessel has entered.

If the signal is "vessel leaving the docks for the ante-port" the vessel in the foreport, moving towards Jetty "A" to enter the docks, must wait in the free zone, stop engines, keeping to the right, and drop anchor if necessary, until the outgoing vessel is outside and well clear of Jetty "A".

The same regulation applies to vessels leaving the River Dock. In this case, the vessel leaving Jetty "A" has priority, coming from Docks I and II the first will wait for the second before starting engines.

All vessels navigating in the same direction in the ante-port must keep a distance of not less than 300 m. from each other stern to bow. They must not pass each other or navigate in pairs.

In the event of offences being incurred whilst an Uruguayan Pilot is on board, at the request of the local ship's Agent, the Marine Authority will determine whether the Pilot is responsible for the offence having occurred, and take measures accordingly.

Vessels which load beyond the appropriate load line will be subject to a fine of 1,000,000 pesos.

DOCUMENTS:

Consular Documents: The Consulate in a foreign port from which merchandise is to be shipped to a Uruguayan port must be presented with the following documents:

(a) Cargo Manifest, original and 3 copies.
(b) Crew List, original and 1 copy.
(c) Passenger List (or no-passenger declaration), original and 1 copy.
(d) Bills of Lading, original and 3 copies.
(e) Commercial Invoice, original and 3 copies.
(f) In the event that the vessel is cleared in-ballast, an in-ballast declaration, original and 1 copy.

One copy of each document is filed at the Consulate, and the following are returned, duly visaed:

1 original manifest, 1 copy of each bill of lading, and 1 copy of the commercial invoice, in an envelope addressed to the Customs Administrator of the port of destination.

1 copy of the manifest, and 1 copy of the bills of lading, in an envelope addressed to the National Ports Administration.

1 copy of the manifest, the original and 2 copies of the bills of lading, the original commercial invoice, the original crew list, and the original passenger list (or no-passenger declaration).

Prior to Arrival:

Notification of Arrival – by Ships' Agents.

(a) Container vessels (minimum load 30 FCL and minimum discharge 30 FCL stipulated) and passenger vessels have berthing priority. Agents must notify the arrival of the vessel 10 days in advance to the National Port Administration (ANP) and confirm ETA 2 days ahead of arrival.
(b) For arrival in Uruguayan ports of all other vessels, agents must notify the ANP 48 hours in advance.

All notifications must be made on special forms from the ANP on request for a berth, presenting original and 6 copies, accompanied by a complete set of cargo manifests in Spanish.

For container vessels, Agents must present lists with details of a complete nature covering the containers to be unloaded in Montevideo (prefix, number, contents, gross weight and tare), whether to be discharged to store or to quay, and final destination in the case of transit.

Request for Port Services:

As has been said in the previous section, the berthing request must be presented to the ANP and acts as advice of arrival.

Each morning at 1000 hrs. the ANP designates berthing crews for vessels for the next 24 hours. In the event of there being no berthing staff available, the ANP appoints a place for waiting berthing in turn in accordance with the order of arrival at the port of Montevideo.

On Arrival:

Type of Document	*Number and distribution of documents*						
Basic forms	*Prefectura*	*Customs*	*Im'gration*	*Police*	*Health*	*Agency*	*Total*

(a) Visaed by the Uruguayan Consulate.
(b) For the Postal Service.
(c) The Consulate returns 1 envelope to the Customs Administrator, another to the National Ports Administration (with a copy of Manifests and Bills of Lading), and a third to the agency, with the required visaed documents.

Other Requirements:

The agency must provide a cargo book (tally book) for each port to the National Ports Administration.

Prior to Departure:

24 hours prior to sailing, the vessel must notify the Maritime Prefecture and Migration. Representatives of these agencies must receive a crew list and check any changes. If the vessel carries passengers, the Inspector of the National Migration Administration must prepare a record of a sailing inspection, similar to that required upon the vessel's arrival.

The Maritime Prefecture authorises the clearance of the vessel.

PILOTAGE: Also see "Control". Pilotage is compulsory in all river and port zones, except for vessels coming from the East to ports between La Paloma and Montevideo Roads, or entering Montevideo Roads for no commercial reason. All coastal vessels either Uruguayan or foreign are also exempt.

Pilotage Zones:

1. RIVER PLATE – Comprises zone between imaginary lines in the East from Punta del Este (Uruguay) and Punta Rasa, on Cape San Antonio (Argentina) and on the West between Colonia and San Isidro (Argentina).
2. RIVER URUGUAY – From 56.5 km. of Farallon Channel to Uruguayan ports on the River Uruguay.
3. PORTS – Pilotage zones, comprises limits of each port including its Roads.
4. SBM at Jose Ignacio.

In the River Plate, Pilots presently board to the South of the wreck of the *Calpean Star,* approximately 4.5 km. South and lying 70 m. West of the dredged access channel.

Several of the pairs of buoys are missing, and only the Mid Channel Buoy indicating the entrance to the Access Channel, 5 miles South from the port, and the 2 pairs nearest to the breakwaters are operating.

When taking tankers, the port Pilot usually goes out to the 5-mile mark.

There is no more than 30 ft. in the Access Channel at the moment; dredging is being carried on, but there are only 2 dredgers operating between the channel and the port of Montevideo itself.

The current is across the channel, running at about 1 knot, and changes direction more with the wind than the tide.

Vessels awaiting Pilot should anchor on the West of the channel and South of the *Calpean Star;* there is 24 ft. up to 500 m. West of the channel. The zone to the East of the Access Channel has submarine cables and must therefore be avoided.

Pilots are ordered through the Agent, and have an up to date communications system installed in their office on the 11th floor of Custom Building.

Permanent watch is kept on Channel 16 VHF, and operator speaks English. It is possible to call "Practicos Montevideo" and ask to be connected by phone to the vessel's Agent's office for last minute instructions, etc.

Channel	Frequency	Channel	Frequency
9	156.45	11	156.55
16	156.80		

The port is closed when wind force exceeds 43 knots or, at night 37 knots, or if visibility is less than 1 km., but otherwise vessels can enter or sail at any time.

There is also a Telex machine with 24 hour watch, over which messages can be transmitted to Agents out of office hours, over a weekend, for example. Call sign is DGT 843 Pilot CX. This is particularly useful for vessels sailing late from Buenos Aires, and the Office will pass on the message to the corresponding Agency by phone.

All Pilots carry a "walkie-talkie" and can communicate either with their office, the Port Authority or the Semaphore Station, using Channel 9 for the Port Offices and 11 for the Pilot's Office, 16 being kept for use with vessels.

Ordering of River Pilots for Sailings from Uruguayan River Ports: Although Masters can apply directly for Pilots such applications must be made by telegram addressed to the Practico Mayor Montevideo, it is preferable for them to keep their Montevideo Agent fully informed and leave the latter to order the Pilot.

The opportunity of ordering Pilots at any hour having been discontinued makes it more essential than ever that Montevideo Agents are kept accurately informed regarding expected readiness to sail. Failure to do so will result in unnecessary demurrage being paid to Pilots or delay to the ship concerned.

Pilots for Vessels Proceeding from Sea to a Uruguayan Port on the River Uruguay: A Uruguayan Pilot must be employed to conduct ships from sea to a Uruguayan Port on the River Uruguay.

Vessels must call at Montevideo Roads to embark Pilot and pay the cost of tug to take out Pilot. They can also, alternatively, take an Argentine Pilot at Recalada who will take the vessel to Intersection, where in either case an Argentine River Pilot will board to take the vessel to the Roads of port of destination, where a Uruguayan Port Pilot will come aboard, this being a simpler procedure and all handled by Agents in Buenos Aires (one radio advice).

Vessels from an Argentine Port Bound for Uruguayan River Port: Such vessels are normally taken to immediately off port of destination by an Argentine Pilot, but they must be berthed by a Uruguayan Pilot who has to be sent from Montevideo, thus Montevideo Agents must be kept promptly informed of vessel's position to enable them to order a Pilot to berth ship without delay.

Vessels Leaving Uruguayan Port for Argentine Ports on the River Parana: Uruguayan River Pilot supplied from Montevideo must be employed for unberthing, and this Pilot takes vessel to the Bravo Channel off Nueva Palmira, where the Argentine River Parana Pilot, who is normally already aboard, takes over.

The Uruguayan Pilot is paid in accordance with tariff to Nueva Palmira plus an unberthing fee and travelling expenses.

HEALTH: In order to be able to enter port and berth without delay, the Authorities accept a radio, cable or telex request, couched in the following terms (messages must be sent in Spanish).

Vessels Arriving from Elsewhere:

Capitan...solicita libre platica
(here the name of the vessel)
informando proceder de Buenos Aires, siendo su escala anterior
....
(here a port in another previous country which could be Santos, Valparaiso, Capetown, etc.)
ondicion sanitaria buena ....Capitan
(here the name of the Master)

Vessels Arriving from Buenos Aires:

Capitan...solicita libres platica
(here the name of the vessel)
informando proceder de ....
(here a port of origin, say London – Liverpool – San Francisco – Rijeka – Kotka – Tokyo – Oslo, etc.)
siendo su ultimo puerto ....
(here say Santos – Valparaiso – Capetown, etc.)
condicion sanitaria buena..Capitan
(here the name of the Master)

There have been cases of delay in delivery of radio messages, even though passed on by phone, but the original message must accompany Agent's request for Free Pratique, hence it is advisable to use cable or telex services if possible. Messages must be sent at least 24 hours ahead, and changes in ETA advised.

Although it is possible to take Pratique in Uruguayan River ports, there is frequently delay there, and since vessels must enter Montevideo to pick up the river port Pilot also, it is advisable in these cases to ask for Pratique at Montevideo as above, and the order from Sanitary Authorities granting Free Pratique will be handed to the Pilot to take on board with him.

In no case, however, does the granting of Pratique by radio modify the inspection in port, where the usual commission must be the first to go on board.

Illness On Board: Any private doctor attending a patient on board must immediately inform the Sanitary Inspector should the disease be contagious.

No patient can be landed without the consent of the doctor of the Health Department with the exception of accident cases that require immediate medical attention, and even in those cases the Health Department Doctor must be informed in order to issue a Sanitary Pass for the Hospital where the man was taken to.

If a Master does not report the existence of illness on board he is liable to fines which are double if patients land without the consent of the Sanitary Authorities.

RADIO:

Notice to Mariners:

Official Uruguayan Notices to Mariners are transmitted in Spanish only preceded by the signal TTT, the number of the Notice, letter R, then contents and are repeated for 15 days. Should there be no Notices to transmit, the wording "no hay avisos para navegantes" will be radioed.

Punta Carreta CWF 2768.5 kHz. A3 0.4 kW. at 0003, 1403 and 1903 hrs. (after the weather forecast).

Cerrito CWA on 4346, 8602,12750, 17208.8 kHz. A1 1.5 kW., also on 421.5 kHz. A1 and A2 5 kW. at 0000, 1400 and 1900 hrs. (after the weather forecast).

Montevideo CX 16850 kHz. A3 10 kW. at 1302 hrs. and 1602 hrs. on working days, at 1700 hrs. on Sundays.

Montevideo	CX 6	659 kHz	A3 2.5 kW.
	CX 26	1050	A3 all transmit Notices to Mariners at 1600 hrs.
	CX 38	1290	A3 5 kW.
	CXA 4	6125	A3 10 kW.
	CXA 6	9620	A3 20 kW.
	CXA10	11900	A3 20 kW.

Weather Forecast: A weather forecast is transmitted in Spanish to cover 3 zones. (See "Plans").

Reference AAA 830 is the Coastal area from Lat. 30° S., Long. 50° W. out to Lat. 30° S., Long. 46° W. and down to Lat. 33° 30′ S., Long. 53° W. and Lat. 35° S., Long. 49° W.

AAA 860, River Plate zone from Lat. 33° 30′ S., Long. 57° W. to Lat. 35° S., Long. 49° W. and down to Lat. 35° 30′ S., Long. 57° W. to Lat. 39° S., Long. 53° W.

AAA 870 Coast of Argentina from Lat. 35° 30′ S., Long. 57° W. to Lat. 39° S., Long. 53° W. and down to Lat. 41° S., Long. 62° W.

Details of all 3 zones are transmitted as follows, valid for 24 hours.

CWA on 421.5 kHz. A1 5 kW. at 0001, 1400 and 1900 hrs.

CWF on 2768.5 kHz. A3 0.4 kW. at 0005, 1405 and 1905 hrs. and in A1 over 4346 kHz, 8602 kHz, 12750 kHz and 17208 kHz.

Time Signals: Are transmitted from 2 stations in Montevideo at 1500 and 2000 hrs. The hour is indicated by 6 dots preceded by a 10 second dash and a 5 second silence. The last dot indicates the hour.

CX 6	on 650 kHz.	A3 25 kW.
CXA 6	9620 kHz.	A3 20 kW.

Standard time is GMT minus 3 hours.

Direction Finding: There are 2 radio beacons specially for maritime navigation. Both operating on circular sweep from the lighthouses at Cape Polonio and Isla de Lobos.

Cape Polonio: Lat. 34° 24′ 00″ S., Long. 53° 47′ 45″ W. frequency 295 kHz. A2 range 380 miles, and 500 kHz. A1 A2.

The signal is "P" repeated 3 times in 10 seconds followed by 18 dashes in 30 seconds, repeat "P" 3 times and 10 seconds silence total period 1 minute. This is repeated 4 times after 5 minutes silence, total 10 minutes.

In good weather transmission must be requested from CWM 21 on 500 kHz. A1 A2. In fog, there is continuous transmission from the hour.

Isla de Lobos: Lat. 35° 01′ 33″ S., Long. 54° 53′ 17″ W. frequency 300 kHz. A2 range 380 miles. The signal "L" is repeated 3 times in 10 seconds, followed by 18 dashes in 30 seconds, repeat "L" 3 times, silence 10 seconds. Total period 1 minute, repeated 4 times, then 5 minutes silence total period 10 minutes.

In good weather this transmission must be requested from CWM 26 on 500 kHz. A1 and A2.

In fog transmission is continuous from 05 minutes in each hour.

There are also the following airbeacons which can be used.

		S.	W.	kHz	
Colonia	COL	34° 27′ 33″	57° 45′ 49″	203	A2 0.075 kW. cont.
Montevideo	CAR	34° 46′ 15″	56° 01′ 28″	380	A2 0.05 kW. cont.
	CRO	34° 48′ 55″	56° 01′ 45″	305	A2 0.05 kW. cont.
	CRR	34° 49′ 50″	56° 00′ 15″	280	A2 0.05 kW. cont.
Gral. Artigas	GA	34° 45′ 00″	55° 58′ 00″	260	A2 0.05 kW. cont.
Punta del Este	CB	34° 55′ 00″	54° 55′ 00″	325	A2 occasional only.

GENERAL INFORMATION:

River Uruguay

Rises in Brazil, and later separates Argentina and Uruguay. Its right bank is generally low, wooded and swampy, the left bank high and hilly. Preparatory work has commenced on a large hydro-electric dam to be built at 332 km., above Concordia, which will take some years but will contribute to a regularisation of the river, which at present rises and falls twice every year, with the varying rainfall seasons in its basin, so that approximately half the year the water is low, usually from January to April and again in August. However, the wind also affects the depth of the water as in the River Plate, so that any seasonal forecast is impossible. A safe year round draft to Concepcion del Uruguay can be taken at 20 ft. 6 in., though vessels from time to time load to 22 ft. 6 in.

The Ministry of Marine publishes fortnightly a bulletin with all information on depths of water in the channels, as well as of changes in buoys, lights, etc.

Two new bridges communicating with Argentina now span the Uruguay River at Fray Bentos and Paysandu. The bridge at Fray Bentos has a clearance of 36 m. over zero, and a main span of 220 m.

CARGO

Movement of Cargo

Once stevedores have come aboard, no cargo, either for the port or in transit, may be handled by the crew, as otherwise the vessel will be called on for high extra wages to stevedores. This also affects the lashing of transit cargo on deck.

Stevedores will not work in the rain, except when loading meat, earning double wages while doing so. They can also be persuaded to handle baggage or mail.

When handling dusty cargo in general, or which gives off ammoniacal, nicotine, or organic emanations, masks must be provided for stevedores' use.

Overcarried Cargo

Cargo for Montevideo is often overcarried to Buenos Aires with the consequent delays in delivery and expenses for the vessel. Holds should be carefully inspected as soon as discharge is said to have been finished to avoid possible overcarrying.

Clean Receipt

Agents will advise if they wish to receive any cargo for which a clean receipt cannot clearly be given, otherwise the cargo should be rejected. Mate's receipts cannot be claused to cover any damage from rain, wetting or other causes which might be sustained after the cargo is received on ship's tackle.

Bulk cargoes falling or drifting into water or on dock

When handling bulk cargoes vessels must place between the vessel and the dock side a wooden scaffolding, with lateral boards, or strong canvas to collect all material which is liable to fall into the water or on to the Dock during handling. There is a heavy fine for non-compliance.

This should be remembered when writing charter parties, especially under FIO conditions, as this should be for account of shippers or receivers.

Delivery of cargo from vessels

The cargo is discharged direct to Fiscal Warehouses, to lorries, lighters or wagons. When the cargo is delivered to Fiscal Warehouses, receipt for this is given to the vessel's Agents by the Custom House official in charge of the Warehouse. If discharged to lighters the lighterman obtains receipt from the Custom House official once the cargo is received in warehouse. When the cargo is delivered direct to Consignees' lorries, the receipt is given by special Custom House officials called "Cargo Receivers".

The goods are delivered by the Custom House officials to the Consignees against the presentation of the "transferencia" (transfer ticket) signed by the Agents of the vessel. The Agents sign the "transferencia", extended on stamped paper, against the Original Bill of Lading, which must be legalised by the Uruguayan Consul at the port of loading.

The steamship Agents must keep a special register of all "transferencias", and are responsible to the Authorities for keeping this register. Agents must retain Original Bill of Lading for cargo discharged, as it must be shown to the Customs Authorities immediately if demanded.

When the Consignees have not received the original documents and they wish to take delivery of the goods from the Custom House they must present a Bank guarantee, drawn up in accordance with the form approved by the Shipagents Association.

Cargo manifested to this country in transit to other countries without documents for Uruguay may not be re-shipped to other countries without government permission.

Marks on goods imported to Uruguay

By a Decree dated 30th January 1939, the Uruguayan Government decided that:

"Packages entering Bonded Warehouse, excepting those containing provisions or beverages, and excepting also 'Barraca' articles, shall be marked with the gross weight, the nett weight and corresponding measurement, in a clear and legible manner. These marks may be either 'fire-branded or printed'.

"The 9th August 1939, the Customs Authorities requested that marks and numbers of cases entering Montevideo warehouses should be placed on the extreme ends".

The Customs Authorities have also made known that it is necessary for the packages entering the warehouse to show their weight and measurement in the decimal-metric system.

The inspection of potato cargoes can be effected on board the carrying vessel, and if found in good sanitary condition, can be discharged direct to shore.

Opening and Closing of Hatches

This can be carried out by either crew or stevedores, and hatches must be kept closed when not in use.

Shipments of Meat

These are controlled by the Ministry of Agriculture, whose inspectors check ships' holds before shipment can commence. Holds must be clean and disinfected and temperature controlled to minus 1° to a maximum of plus 1° Celsius for chilled meat, or minus 10° for frozen meat.

Chilled is to be hung on hooks adjustable for height and space and stow of frozen must give a uniform distribution of weight. Alternatively, special cuts are packed and shipped in cartons.

Containers

Use of containers is very limited, since these must be opened up and emptied on the dock alongside, or even on board the vessel. The container itself is considered as part of the vessel's gear, and must be re-shipped without delay.

On rare occasions the Armed Forces have had containers moved out to their barracks.

The Port Authority is buying a crane to handle containers of 8 ft. × 8 ft. × 20 ft. and a maximum loaded weight of 44,800 lbs.

Consular Dues

All ships arriving at Montevideo must pay Consular dues, with the following exceptions:

Ships that due to a change en route, or by special call of their Agents in Uruguay, during passage, arrive at Montevideo with the sole purpose of receiving orders, as long as no commercial operations are effected.

Ships arriving in distress and which leave port without effecting operations.

Ships arriving for the sole purpose of landing or embarking Pilot.

The Ministry of Foreign Affairs consider bunkering as an operation, therefore ships calling at Montevideo for bunkers must pay Consular dues.

Consular value of the Uruguayan Peso – For the payment of fees abroad, the Executive Power will fix periodically the respective values of the peso, in accordance with exchange fluctuations.

Hours of Attendance at the Uruguayan Consulates – The Office hours of the Consulates will be those fixed by the Government in agreement with the Consuls in each country, endeavouring in each case to have the same working hours as those of the Custom House and other Public Offices of each City. Outside these hours, overtime is charged.

Consular dues on Bills of Lading – When vessels load cargo for Uruguay at ports where there is no Uruguayan Consulate, these dues are collected when the vessel arrives at Montevideo or at any other Uruguayan port. The Agent then recovers these charges from the Consignees.

CREW:

Deserters – Masters and/or Agents must report any deserters when the vessel sails. The Maritime Authorities give intervention to the Police Department, and if the men are located, the Agents must hand them over to the respective Consuls. However, the Agents continue to be responsible before the Authorities for the ultimate repatriation of the men, which must be done at first opportunity.

Vessels are subject to a fine per man. The Agents have also to pay repatriation expenses, in cases where the respective Consuls will not do so.

They must also deposit a guarantee which can be used for repatriation expenses in case the deserter stays in the country for more than 15 days.

Time limit for getting crew members left behind out of the country – According to law, Agents must arrange that such crew members leave the country within 15 days. This period of grace commences as from the date of vessel's departure in respect of deserters and for those disembarked for medical treatment as from date on which they are medically certified as fit for travel.

Upkeep of men left in hospital or temporarily disembarked and traced deserters – The Agents are responsible for the maintenance of men disembarked for medical treatment, or temporarily with a special Immigration permit, and for deserters, until they leave the Country.

Stowaways – Masters of vessels having stowaways on board must report them to the Authorities, stating their name and port of embarkation. The stowaways must be kept on board. If they escape and are found after the vessel sails, Agents will be responsible for their repatriation and upkeep charges until they leave the Country. As with deserters, vessels with stowaways on board are liable to a fine per man if this regulation is not complied with.

Agents must also deposit a guarantee per man, amount to be used for repatriating the stowaway or for conveyance to the port of embarkation.

Landing members of crew – Paying off crew for other than medical assistance is not permitted, but exceptions are granted in special cases. An application must be presented by the Agents to the Immigration Department, and if the permit is granted, a formal declaration is signed by the Master of the vessel, the Agents, the Immigration Inspector and the person wishing to disembark, setting forth length of time he is going to remain in the Country and conditions of departure. The personal documents of the person allowed to land, remain in charge of the Immigration Board.

If any member of the crew is landed for medical treatment or paid off without the corresponding permit, the vessel will be fined.

Gangways and Rat-Guards

A gangway must be placed and ready after a vessel comes alongside the quay, but this must not be presented before coming in to the quay. Authorities will only come aboard by the gangways.

Gangways must also have a lifebuoy with suitable line attached and handy, and a safety net must be placed under the gangway, otherwise shore labour will not board vessels, with consequent delay.

The gangway must also be brightly illuminated at night; an oil lamp is not sufficient.

As soon as vessel is securely moored, regulation size (not less than 80 cm.) rat-guards must be placed on all ropes, wires, fenders, lines and hoses.

Heavy fines are imposed for non-compliance with any of these or other regulations.

Overside Discharges

All overside discharges from latrines, bathrooms, gallery, scuppers, engine room, etc. must be screened or covered when vessel is alongside the quay, as vessels will be fined if the discharge falls on the dock or gangway.

Adjustment of Compasses

Vessels proceeding through Magellan Straits – The disposition issued by the Chilean Shipping Authorities on 13th April 1953, states:

"When a foreign ship arrives at the Magellan Straits and applies for a Pilot, official or private, for navigating the Channels, the Pilot must first check the compass for deviations of more than 5°, and if such deviation has been determined more than 6 months ago, especially in a place with great difference of latitude or different hemisphere, compensation of compass is obligatory when not in true order, and a written declaration to this effect will be made in the pilotage agreement. The Authorities will also send an officer to verify that the compass is in satisfactory condition before entering the Straits".

To avoid probable delays, ships heading for the Straits can make the necessary compensation in the Port of Montevideo or in the ante port whilst waiting for orders for departure. This port is most convenient for this class of compensation because at the present moment there is no magnetic variation and also because it is a quiet harbour with sufficient depth for turning. A compass adjuster may be obtained at any time.

200 Mile Limit and Fishing

Uruguay has declared sovereignty over 200 miles off shore, reserving all fishing and undersea exploitation rights. A number of foreign flag vessels fishing without permits have been seized and heavily fined, their catch and gear being confiscated.

Permits are obtainable, but in no case for vessels over 500 tons gross, to operate within 60 miles from shore, while all activity in territorial waters (200 miles) is forbidden in the months of May and June.

Garbage

Garbage is collected every morning by truck. There is a strict prohibition of dumping anything into the port, and oil tanks must not be cleaned within 30 miles of the coast, and on a falling tide.

Old dunnage should not be dumped or sold, without permission from the Authorities, through Agents.

Ships' Boats

Use of ship's boats is forbidden within the port, unless they are being lowered, with prior permission, for maintenance or exercises.

Fenders

All vessels must have at least 2 large fenders, to keep them 5 ft. or more off the quay. If the vessel has no fenders, or due to deck cargo cannot use them Agents should be warned in advance to rent the necessary equipment and have it ready on arrival.

Dropping Anchor when Berthing

If an anchor is dropped when approaching a dock to berth, to control the vessel as she moves in, it is essential that the anchor should be hove in again once the ship is moored. Port regulations require this and any damage to other craft, real or imaginary, through fouling anchor or chain, would cause considerable trouble.

SYSTEM OF CONTROL CENTRES AND MARITIME INFORMATION (COASTAL STATIONS FP-FT-FW, VHF-FM):

Legal Basis

(a) System of Control and Information of Movement of the Port of Montevideo and its zone of influence made operative on 9/4/75. (Maritime Regulation No. 1).

(b) Control Centre and Information of the Maritime Movement of the Port of Colonia and its zone of influence made operative on 23/9/76. (Maritime Regulation No. 3).

(c) Control Centre and Information of the Maritime Movement of the Port of Nueva Palmira and its zone of influence made operative on 1/10/76. (Maritime Regulation No. 4).

(d) Control Centre and Information of the Maritime Movement of the Port of Punta del Este and its zone of influence made operative on 2/1/77. (Maritime Regulation No. 5).

(e) Control Centre and Information of the Maritime Movement of the Western Coast and its zone of influence made operative on 27/4/78. (Maritime Regulation No. 11).

(f) Control Centre and Information of the Maritime Movement of the Port of La Paloma and its zone of influence made operative on 1/11/78. (Maritime Regulation No. 12).

Note: In all the creations of the Control Centres, due account was taken of Programmes 1.09 and 3.08 corresponding to Law 14.106 and Sub-Programmes: "Maritime Police" and "Direction of Mercantile Marine".

(g) Control and surveillance of fishing vessels in the various fishing areas within the waters in the jurisdiction of the P.N.N. – Sources: Laws Nos. 14.145, 14.521 and 14.106 of the P.N.N. – Programme 1.09. (Maritime Regulation No. 2).

(h) Equipment which fishing vessels under the Uruguayan flag must possess when they operate in the common fishing zone between the Eastern Republic of Uruguay and in the Uruguayan fishing areas proper.

Sources: Maritime Regulation No. 2 of the 23/7/76. Decree of Co-ordination of Punta del Este of 27/1/76 (P.N.N. – P.N.A.). (Maritime Regulation No. 6).

(i) Equipment which vessels and/or craft in the coasting trade, pleasure craft, passenger vessels and working boats must carry where they operate in the Ports of the Republic and Navigate in the River Uruguay. (The zone between International Bridges and the Salto Grande).

Sources: Appendix 18 MAR 2 of the Radio communications regulation of the UIT and the Agreement arising from the meeting between Uruguay and Argentina (Buenos Aires 9/76) in respect of the use of VHF and FM channels and Maritime Regulations Nos. 1 to 6 of the P.N.N. – (Maritime Regulation No. 7).

(j) Law covering the control of pollution: Sources: Law No. 13.833 of the 29/12/69 and in particular articles 2 and 12 of the said Law. Chapter IX Pollution – (Articles 47 to 52) of the Treaty of the River Plate and its Maritime Frontage and Regulation of 28/10/74 of the Prefecture of the Port of Montevideo (Maritime Regulation No. 8).

(k) Zones for lightening ships and complement of cargo: Sources: Resolutions Nos. 2 and 4 of the Administrative Commission of the River Plate of dates 30/9/77 and 26/10/77 as laid down in Article 28 of the Treaty of the River Plate and its River Frontage and established transitorily in the Article 88 of the said treaty (Maritime Regulation No. 9).

(l) "LASH" – Type Operations: Sources: Resolution No. 1/2/78 of the Administrative Commission of the River Plate, Chapter IV. Articles 24 and 27 (Port Facilities, lightening operations and complements of cargo) of the Treaty of the River Plate and its maritime frontage (Maritime Regulation No. 10.).

(m) Agreement on the International Regulation for preventing unauthorised boarding.

(n) The Treaty of the River Plate and its Maritime Frontage.

(o) The Statutes of the River Uruguay.

(p) The International Agreement for the Safety of Human Life at Sea – 1974.

(q) Regulation of Radio-communications of the International Union of Telecommunications (UIT) and nomenclatures.

Particulars of the System

1. AIMS OF THE SYSTEM OF CONTROL CENTRES

(a) To effect positive sovereignty over the Area of the System:
1. Territorial Sea
2. River Plate
3. River Uruguay
4. Merin Lagoon

(b) To offer support to the National Mercantile Navigation and of third parties, complying with the objectives as propounded by the International Maritime Organisation (IMO) and by the International Telecommunications Union (UIT).

(c) To serve as a chain of Control Towers, effecting control and information of Movement of vessels and Port Operations.

(d) To co-ordinate with Public and Private Institutions who operate within the Ports of the Republic, to facilitate and activate port operations, avoiding delays and inconvenience.

2. GENERAL FUNCTIONS

The General functions of the Centre are:

(a) To maintain real and efficient control of the movement of vessels, in the area of application of the system in order:
1. To prevent collisions between vessels.
2. To alert the systems of Search and Rescue and/or Salvage in the event of vessels requiring assistance.
3. To facilitate BYR operations.

(b) To maintain real and orderly control of the operations in the ports to:
1. To prevent groundings and collisions with obstacles in port works:
2. To have prepared emergency plans for cases of disasters and maritime accidents within the Ports and International Bridges (River Uruguay).

(c) To maintain up-to-date information concerning the state of the weather, lighting and all other matters contributing to the safety of navigation and operations in the area.

(d) To maintain up-to-date information for Maritime Agencies and/or Owners, providing such information to facilitate and activate port operations to be effected by vessels, obviating delays and inconvenience at all times.

(e) To serve Public and/or Private Institutions who operate in the Ports, collecting, classifying, analysing, evaluating and disseminating all the necessary information for the better fulfilment of port service.

(f) To comply with all other functions which are specified by the Mandate and to co-operate with Public Authorities and organisations in all matters relating to its functions.

3. CONTROL AND INFORMATION FROM THE CENTRES

The system belongs to the National Navy and is controlled by the National Navy Prefecture. It is directed from the Montevideo Control Centre.

(a) Control of Movement of Vessels – Control of vessels navigating within the Vessel Movement Areas.

(b) Control of Port Operations – Control of vessels manoeuvring within the ports of the Republic, including roads and access channels.

(c) Control of International Bridges – Control of vessels navigating in the International Bridges Zone – Gral. Jose Artigas Bridge at Paysandu, and Gral. San Martin Bridge at Fray Bentos.

(d) Vessel Movement Service – Maritime Mobile Safety Service, between coastal stations and vessels or between vessels, where the messages refer solely to vessel movement.

(e) Port Operation Service – Maritime Mobile Service in a port or in its district, between coastal stations and vessels, where the messages refer solely to vessel operations, movement and safety and, in the event of emergency, to safeguarding persons.

4. ZONES OF CONTROL AND INFORMATION OF THE CONTROL CENTRE SYSTEM

(a) Port of Montevideo (Deep Sea – Coasting – Fishing).
1. "Alpha" – Control and information of vessel movement.
2. "Bravo" – Control and information of port operations.

(b) Port of Buceo (Pleasure Craft).
1. "Oscar" – Control and information of port operations.

(c) Port of Santiago Vazquez (Pleasure Craft – Coasting).
1. "Papa" – Control and information of port operations.

(d) Port of La Paloma (Fishing Centre).
1. "Kilo" – Control and information of movement of vessels.
2. "Lima" – Control and information of port operations.

(e) Port of Punta del Este (Fishing – Pleasure Craft).
1. "Golf" – Control and information of vessel movement.
2. "Hotel" – Control and information of port operations.

(f) Port of Piriapolis.
1. "Tango" – Control and information of port operations.

(g) Port of Colonia (Passage port to Buenos Aires).
1. "Charlie" – Control and information of vessel movement.
2. "Delta" – Control and information of port operations.

(h) Port of Sauce (Coasting).
1. "Uniform" – Control and information of vessel movement and of port operations.

(i) Port of Nueva Palmira (Deep Sea).
1. "Echo" – Control and information of movement of vessels.
2. "Foxtrot" – Control and information of port operations.

(j) Port of Carmelo (Pleasure Craft – Coasting).
1. "Quebec" – Control and information of port operations.

(k) Port of Fray Bentos (Overseas – Navigation – International Bridges).
1. "India" – Control and information of the movement of vessels.
2. "Juliet" – Control and information of port operations.

(l) Puerto Paysandu (Overseas – Navigation – International Bridges).
1. "Mike" – Control and information of the movement of vessels.
2. "November" – Control and information of port operations.

(m) Puerto Salto (Coasting – Pleasure Craft – Passages).
1. "Romeo" – Control and information of the movement of vessels.
2. "Sierra" – Control and information of port operations.

5. COMMUNICATIONS

All Centres maintain permanent listening on Channel 16 (VHF – FM).

(a) *Language:* The language used in communication is Spanish.

Vessels who have difficulty in communicating in Spanish may do so in English, and if there are problems in hearing properly they may use the groups of the International Code Signals, Tables of Spelling equivalents and Numbers, or "Q" Code.

(b) *Channels – Frequencies and Usages:* There will be those as defined by Appendix 18 Mar 2, of the Radiocommunications Regulations of the International Telecommunications Union, published by the General Secretary of the UIT in Geneva 1976 and the points agreed in the Uruguay – Argentina Meeting, carried out in the City of Buenos Aires 9/76, use of the VHF Channels (Band 156 – 174 MHz.).

Channel	*Frequencies*	*Usage*
6	156.300 MHz.	Bridge to Bridge.
8	156.400 MHz.	Port Operations.
9	156.450 MHz.	Port Operations.
11	156.550 MHz.	Transmission from the Centres in fulfilment of objectives.
13	156.650 MHz.	Transmission from the Centres in fulfilment of objectives.
15	156.750 MHz.	Meteorological Bulletins and Warnings to Navigators.
16	156.800 MHz.	Calling up and Security.
18	156.900 MHz. Reception	Jose Ignacio Oil Terminal.
	161.500 MHz. Transmission	Jose Ignacio Oil Terminal.

Should problems arise with VHF equipment on vessels (the range of same, out of service, etc.) communications should be effected on MF or on HF with the Safety Coastal Stations of the P.N.N.

The services and frequencies of the Coastal Stations are described in the tables at the end of "Uruguay General" Section.

Vessels who, for some reason or other cannot effect communications by radiotelephone (VHF, HF, MF), should do so by radiotelegraphy through the intermediary of the Coastal Station (open to public correspondence) Cerrito Radio CWA.

Radiotelegrams should be sent in time to the telegraphic address Comopre.

(c) *Listening Out by Vessels:*

1. *All vessels* in Uruguayan judicial waters must maintain permanent listening watch on Channel 16 (VHF – FM) except when they are moored in port. If there are problems on VHF they should listen out on 2182 or 4125 KHz.
2. When a vessel cannot, due to any fault of whatever nature, maintain listening watch on Channel 16, she should pass to Channel 11 or 13, but advise the Control Centre first.
3. In the various zones, the vessels must use as a working channel to communicate with the Zone Centre, the frequency which the Control Centre will indicate to them on Channel 16.
4. In all the ports of the Republic, vessels and/or craft in the coasting trade, pleasure craft (Categories A and B), passenger craft and traffic units (tugs, dredgers, launches, lighters, etc.) must be equipped with a VHF – FM transmitter and receiver for local communications with Port Controls, Appendix 18 Mar 2 of the Radiocommunications Regulations of the International Telecommunications Union.
5. *All vessels or craft* navigating or carrying out operations within 25 miles or more of the coast, must be equipped with a BLU transmitter and receiver (with corresponding frequencies) of 150 watts effective power and A3A and A3J type transmission.

(d) *Services and Frequencies of the FP, FC and FW Dependent on the P.N.N.*

Coastal Station (FC), Station for Port Operation (FP), Station for Service of Vessel Movement (FT), Station which is both for Port Operations and for Service of Vessel Movement (FW).

(e) If in fulfilment of the regulations set out by this System, vessels on calling up the Control Centre cannot obtain a reply, they should immediately make the communication in question to the Director of the System (telegraphic address: Comopre) by radiotelegraphy or radiotelephony via Cerrito Radio (CWA) or Punta Carretas Radio (CWF) respectively.

Communications to Centres:

1. From Vessels in the Zone.
    - (a) Position on entering and leaving each Zone of Vessel Movement (Flag, Name, International Call Sign, Where From, Where Bound, Latitude, Longitude, Force, Speed and Maximum Draft).
    - (b) ETA at next port.
    - (c) Problems with characteristic aspects during navigation.
    - (d) If anchoring or raising anchor at any point in the Control Zone of Vessel Movement, it is necessary to ask for authorisation when this is done within Port Operation Zones, and also whenever any manoeuvre is intended to be carried out, and this authorisation expiring within twenty (20) minutes from its request.
    - (e) Any damage suffered by the vessel.
    - (f) Assistance given to damaged vessels or those in difficulty.
    - (g) Any indications of dangerous obstacles to navigation which are not duly indicated by buoys and lights.
    - (h) Any serious reduction in visibility.
2. Pilotage:
    - (a) Whatever is specified in the General Pilotage Regulations.
    - (b) Time of embarkation and/or of disembarkation.
    - (c) Request of Master concerning change, mooring, etc.
    - (d) Difficulties in pilotage.
3. Concerning the Owner or Agent:
    - (a) Monthly list of expected vessels.
    - (b) Confirmation of arrival of vessels 24 hours in advance.
    - (c) News concerning vessels being delayed or arriving early.
    - (d) Information if the vessels are carrying hazardous cargo (explosives or inflammables) 24 hours in advance of arrival, including any such cargo in transit, mentioning:
        - (i) The amount and location of such cargo.
        - (ii) The correct technical name of the substance (the designation used for transportation purposes), the UNO number (if this is given), classification in the IMDG Code (if this is given), the flash point (if applicable) and quantity.
        - (iii) The presence or otherwise on board of a Certificate which is valid showing the ability of the vessel in respect of the cargo which it is carrying (only for hazardous substances carried in bulk);
        - (iv) The stowage of hazardous cargo on board, indicating those which have to be unloaded and those which have to remain on board;
        - (v) The condition in which the hazardous cargo is and any defect which is known in respect of packages or drums, together with the system of containing and handling of the cargo, of the equipment and instruments used (when hazardous bulk cargo is involved), which may engender excessive risk.
        - (vi) Any known defect which may effect considerably the safety of navigation.

(f) *Communications from the Centres:*

1. To vessels (navigating towards Uruguayan Ports).
    - (a) The quay at which they will berth.
    - (b) The Pilot who will assist the vessel.
    - (c) Any information from the Maritime Agent with regard to future operation.
2. To the Pilot:
    - (a) Tugs and cable launches who will assist him.
    - (b) Defences on the sea wall.
    - (c) Bitts which the vessel will use.
3. To the Owner or Agent:
    - (a) Position of their vessel.
    - (b) ETA.
    - (c) Conditions of cargo.
    - (d) Time at which the Pilot will go on board.
    - (e) Time of berthing.
4. To the Centre Director of the System (Control Centre and Information of the Maritime Movement of the Port of Montevideo) immediately any information is obtained with regard to:
    - (a) A BYR incident or any difficulty which is presented to a vessel.
    - (b) A deep sea or coasting vessel (data concerning Naval Messages in accordance with the Abbreviated Code).
    - (c) A fishing vessel, with the Naval Message data being as follows:
        - – Where from, Flag, Name, International Call Sign, Month, Day and Hour of sailing, Position (for Customs Clearance), Month, Day and Hour of Position, Activity (fishing or bound for Port).
        - – Arrival, Flag, Name, International Call Sign, Month, Day and Hour of Arrival, Port of Arrival.
        - – Fishing or within the Zone, or the Port, Flag, Name, International Call Sign, Position, Month, Day and Hour of Position ETA (if it is within the Zone or the Port).

(5) To the adjacent Control Centre:

When a deep sea or coasting vessel sails from a port controlled by the Control Centre, or when this vessel effects a passage to the Vessel Movement Zone controlled by that Centre, this must be informed to the adjacent Control Centre (according to the course of the vessel) stating ETA and the Zone of Vessel Movement of this adjacent Centre.

Note: The Control Centres will effect communications by Naval Message. These Naval Messages must be sent immediately after receipt from vessels or when such information comes to hand from other sources.

(Naval Messages in this context will have Priority Precedence).

(6) Command of to the Naval Control of Maritime Traffic in Uruguay (Contramu). Immediately on receipt all information specified in item (f) – Number (4).

(g) *Communications from Coastal Stations (Vessel Movements – FT, MF-HF)*

1. To the Centre Director of the System (Control Centre and Information of the Maritime Movement of the Port of Montevideo). Immediately on receipt all information specified in Item (f) Number (4).
2. To the Control Centre with responsibility over the zone to which a message refers.
   The same as those quoted in the preceding Number 1.

6. FISHING VESSELS:

(a) All fishing vessels clearing entry or departure from any national port towards the different Fishing Areas must communicate to the Maritime Authority the following:

1. On Sailing:
    - a. Flag (FL)
    - b. Name of Ship (SHP).
    - c. International Call Sign (IND).
    - d. Port of Departure (DEP)
    - e. Month, day and hour of departure (TOD).
    - f. Destination (Indicate Fishing Zone and Position) (DST).
    - g. Month, day and hour estimated at arriving at the Fishing Zone (ETA Z/P).
2. On Arrival:
    - a. Flag (FL).
    - b. Name of Ship (SHP).
    - c. International Call Sign (IND).
    - d. Port of Arrival (PORT).
    - e. Month, day and hour of arrival (ARR).

(b) All fishing vessels *navigating* must communicate every 6 hours with the Safety Coastal Station of the National Naval Prefecture of the Eastern Republic of Uruguay which is nearest to them (or to which they are listening) giving the following information:

1. International Call Sign (IND).
2. Position in Latitude and Longitude (POS).
3. Month, day and hour of the position (DHPOS).
4. Port of Destination (DET).
5. Activity: (Fishing – Coming to Port – Going to Zone) (ACT).

(c) *Normal Fishing Zones:*

1. High Seas Zone (Altamar): Zone which is outside the judical waters and within the Common Fishing Area.
2. Common Fishing Area (ZOCOPES): Art. 73 of the River Plate and Territorial Sea Treaty.
3. The Zone of the River Plate (RIPLATA).
4. The coastal Zone of the Atlantic Ocean (COSATLAN): Zone included between our coast on the Atlantic Ocean and a Line 12 miles out.
5. Zone of the River Uruguay (RIURU).
6. Zone of the Merin Lagoon (LAMERIN).

(d) Uruguayan Fishing Vessels which are *navigating* in the Common Fishing Area (Uruguay – Argentine) within the Sector of Argentine Jurisdiction are obliged to communicate its position to the Argentine Maritime Authority. Communications will be made on frequency 3860.6 kHz. to the Coastal Safety Station of the Prefecture of the Mar del Plata.

(e) *Note:* Information to be communicated: All the communications as specified in (b).

All fishing vessels must *listen out permanently* on Channel 16 (VHF – FM), except when they are moored in port. If they are at a distance from the coast which prevents a safe communication on VHF, listening must be effected on 2721.5 kHz. Those effecting operations 25 miles or more from the coast, must be equipped with a BLU transmitter and receiver (with the corresponding frequencies) with 150 watts effective power and type of transmission A3A and A3J, and also fishing vessels must be equipped with a receiver on 2721.5 kHz.

(f) Vessels, after prior request to the Control Centre covering them, may pass to Channel 6 or 8, and keep on those *only for the necessary time* for Fishing Manoeuvres, after which they must return to Channel 16, and advise the Centre accordingly.

7. HYDROCARBONS: It is prohibited to pour hydrocarbons or residual matter arising from the washing of tanks, clearing of bilges and ballast in general or any other action capable of having contaminary effects in waters within the territorial sea of Uruguay with the exception of the zone which is:
   (a) Outside the limits of the River Plate.
   (b) Outside 100 miles of the Uruguayan Territorial Waters, i.e. 100 miles out from the Atlantic Ocean coast.
   (c) Outside the Prohibition area for contaminatory action (Article 78 of the River Plate Treaty).

8. ZONES OF OPERATION FOR LIGHTENING AND COMPLEMENT OF CARGO:

The zones of operation for lightening and complement of cargo are as follows:

Zone "A": Between the Parallels of Lat. South 35° 04′ and 35° 08′ and between the Meridians of Long. West 56° 00′ and 56° 02′.
Zone "B": Between the Parallels of Lat. South 35° 30′ and 35° 33′ and between the Meridians of Long. West 56° 30′ and 56° 38′.
Zone "C": Between the Parallels of Lat. South 35° 35′ and 36° 06′ and between the Meridians of Long. West 56° 30′ and 56° 38′.
Zone "D": Between the Parallels of Lat. South 35° 04′ and 35° 06′ and between the Meridians of Long. West 56° 11′ and 56° 16′.

9. OPERATIONS OF LOADING AND UNLOADING "LASH" TYPE VESSELS:

The operation of loading and unloading "LASH" type vessels for the national territory, on the one hand may be effected apart from within the lightening and complement of cargo areas in ports, also in the corresponding roads.

10. TRANSFER OF VESSELS:

The transfer of vessels between roads and lightening areas and for complement of cargo purposes, will be effected under pilotage and tug control using the Port Services from which the barges in question have come.

CONTROL CENTRES:

Control Centre and Information of Maritime Movement of the Port of Colonia.

LOCATION, INTERNATIONAL CALL SIGN, ADDRESS.

(a) The Centre is controlled from the Prefecture of the Port of Colonia, within the free zone of the Port, located in the main building of the free Port zone of Colonia (Latitude: 34° 28′ 28″ S., Longitude: 57° 57′ 38″ W.).

(b) The call sign of the Control Centre is CWC 23, and for calling up purposes it is possible to use CONTROL COLONIA PREFECTURE.

(c) The Control Centre of the Port of Colonia is located in the Prefecture of the Port of Colonia.

The Prefecture of the Port of Colonia is a dependency of the National Naval Prefecture (2nd Circumscription).

Telephone No. of the Control Centre – 688.

Address – Boulevard Espana 2054 (Department of Colonia).

AREAS OF CONTROL.

(a) The Control Centre and Information of Maritime Movement, covers:
   1. Zone "CHARLIE". The area of the River Plate marked by the Meridians which pass through Martin Chico Point (Longitude: 58° 12′ 30″ W.) and Punta Rosario (Longitude: 57° 21′ W.) and the middle line equidistant from both coasts (Law 14.145/74 – "Treaty covering the Limits of the River Plate"), with the exception of the area of water included between the imaginary line which joins San Carlos Point; Lopez West Island; Farallon Island; the Green Buoy of Vienna, Parallel 34° 30′ S., the Meridian which passes through Riachuelo Point Longitude: 57° 43′ 18″ W., and the coast ("DELTA" AREA).
   2. "DELTA" area. Area of the River Plate, limited by the imaginary line which joins San Carlos Point; Lopez West Island, Farallon Island; the Green Buoy of Vienna, Parallel 34° 30′ S., the Meridian which passes through Riachuelo Point Longitude: 57° 43′ 18″ W., and the coast.

(b) The Control Centre and Information of Maritime Movement of the Port of Sauce covers:
   1. "UNIFORM" zone. The area of the River Plate included between Meridians 57° 25′ 48″ W. and 57° 33′ W., the coast and the parallel Latitude: 34° 29′ 18″ S.

COMMUNICATIONS TO THE CENTRE.

(a) From vessels.
   1. In zone "CHARLIE". The Control Centre must be informed when the following points have been passed:
      Punta Rosario
      Puerto Sauce
      Roca Barriles
      Puerto Colonia
      Km. 56.5 (Farallon Island)
      Km. 71.3 (San Pedro Bar)
      Km. 101 (Martin Chico Point)

   In both Zones of Control the communications as designated in following tables, must be effected.

(b) From the Director of Hydrographic Studies of the MTOP.
   1. The place assigned for berthing or mooring.
   2. Guard and order tugs (when these exist).

Control Centre and Information of the Maritime Movement of the Port of Fray Bentos

LOCATION, INTERNATIONAL CALL SIGN, ADDRESS.

(a) The Centre is controlled from the Prefecture of the Port of Fray Bentos (Latitude: 30° 06′ 50″ S., Longitude 58° 18′ 27″ W.).

(b) The International Call Sign of the Control Centre and Information of the Maritime Movement of the Port of Fray Bentos is CWC 25. When calling up it is possible to use CONTROL FRAY BENTOS PREFECTURA.

(c) The Control Centre of the Port of Fray Bentos is located in the Prefecture of Fray Bentos (5th Circumscription P.N.N.).

Telephone No. of the Control Centre is 321.

Address: Luis A. de Herrera 1249 on the corner with 25 de Agosto, Fray Bentos Department of Rio Negro.

CONTROL AREAS.

(a) The Control Centre Information of the Maritime Movement of the Port of Fray Bentos covers:
   1. Zone "INDIA" The area of the River Uruguay marked by the parallel 33° 30′ S. (Punta Amarilla Km. 46) and the parallel 32° 50′ S. (Roman Island) navigable areas of the Rio Negro and San Salvador and the middle line equidistant from both coasts; with the exception of the Port of Fray Bentos and the area of water marked by the port and maritime constructions (zone "JULIET").
   2. Zone "JULIET". The port of Fray Bentos and the areas of water marked by the port and maritime constructions.

COMMUNICATIONS TO THE CENTRE.

(a) From vessels:
   1. In zone "INDIA". The Control Centre must be notified during navigation when the following crossings are made:
      Km. 46 (Punta Amarilla)
      Km. 61 (Riacho Yaguari)
      Km. 83 (Paso Barrizal)
      Puerto Fray Bentos
      International Bridge "General San Martin"
      Km. 122 (Nuevo Berlin)
      Km. 140 (Roman Island)

   In both Areas of Control the designated frequencies are shown in following tables.

THE BRIDGE ZONE

All vessels of 100 tons or more gross registered tonnage must comply with the following instructions:

(a) Navigation day and night in both directions will be made under the bridges by the marked channel, in the central arch, between piles 10 and 11 in the Bridge "Libertador General San Martin".

(b) It is prohibited to cross or overtake between Km. 100 and Km. 102.5 and for this purpose the following passage priorities are established:
   1. Those navigating downstream over those navigating upstream.
   2. Convoys with a tug either pulling or pushing have priority over all vessels which include those that are navigating downstream.

(c) The vessel or convoy which has to give way will wait outside the limits indicated in point (b). Between those limits it is prohibited to anchor for any cause, even though the channel is left free.

(d) Between the limits indicated in point (b), speed must be reduced to the minimum compatible with good steering and manoeuvring.

(e) In the zones included between the limits indicated in point (b), it is prohibited to effect any form of dredging operation across the whole width of the river.

Control Centre and Information of the Maritime Movement of the Port of La Paloma

LOCATION, INTERNATIONAL CALL SIGN, ADDRESS.

(a) The Centre is controlled from the Prefecture of the Port of La Paloma (Position: Latitude 34° 39′ 30″ S. and Longitude 54° 08′ 28″ W.).

(b) The International Call Sign of the Control Centre and Information of the Maritime Movement of the Port of La Paloma is CWC 30. For calling up purposes "CONTROL LA PALOMA PREFECTURA" may be used.

(c) The Control Centre La Paloma is located in the Prefecture of the Port of La Paloma (8th Circumscription P.N.N.)

Telephone No. of the Control Centre – 16.

Address – Avenida del Navio (Puerto de La Paloma) – Rocha.

CONTROL ZONES.

(a) The Control Centre and Information of the Maritime Movement of the Port of La Paloma comprises:

(1) Zone "KILO". Zone of the Atlantic Ocean (Territorial Sea) situated between the meridians 50° 50′ and 54° 15′ W., limited by the straight line 128° of the Chuy Lighthouse (lateral maritime limit with the Federal Republic of Brazil – Law 14.163) and to the South by the lateral maritime Argentine–Uruguay limit (Law 14.145/974). – "Treaty of Limits of the River Plate". Art. 70), with exception of the Port of La Paloma, between the coast and an imaginary line which goes between the end of the breakwater towards the Eastern point of the Costa Azul (Zone "LIMA"). Zone "LIMA".

(2) Zone "LIMA". Port of La Paloma, zone situated between the coasts and an imaginary line which goes from the end of the breakwater to the Eastern point of Costa Azul.

COMMUNICATIONS TO THE CENTRE.

(a) From vessels to:

(1) In Zone "KILO" – The Control Centre must be informed during navigation when the following points are crossed:
The Lighthouse Chuy
The Lighthouse Cabo Polonio
The Lighthouse Santa Maria

(2) In Zone "LIMA"
During navigation in the Access Channel and within the Port when the Port jetty small light is passed.

Also, in both control zones the communications shown in the following tables must be effected.

(b) From the Hydrographic MTOP Directorate:
(1) Place assigned for berthing or mooring.
(2) Guard or order tugs (when they exist).

Control Centre and Information of the Maritime Movement of the Port of Montevideo.

LOCATION, INTERNATIONAL CALL SIGN, ADDRESS

(a) The Centre is controlled from the National Naval Prefecture, located on the Floors 11, 12 and 13 of the General Command Tower of the Navy (Customs Building Lat. 34° 54′ 03″ S., Long. 56° 12′ 44″ W.).

(b) The International Call Sign of the Control Centre and Information of the Maritime Movement of the Port of Montevideo is CWC 39. In calling up it is possible to use "CONTROL MONTEVIDEO PREFECTURA".

(c) The Call Sign of the Control Centre of the Port of Buceo is "CONTROL BUCE PREFECTURA".

(d) The Call Sign of the Control Centre of the Port of Santiago Vazquez is CWC 38.
In calling up it is possible to use "CONTROL SANTIAGO VAZQUEZ PREFECTURA".

(e) The Control Centre of the Port of Montevideo is located in the building of the Navy General Command.
Telegraphic Address – "Comopre" (Control Montevideo Prefectura).
Telephones – 95.51.01 – 95.24.77 – 95.62.53.
Telex UY 929
Address – Rambla 25 de Agosto de 1825.

ZONES OF CONTROL.

(a) The Control Centre and Information of the Maritime Movement of the port of Montevideo covers:

(1) Zone "ALFA". Zone of the River Plate situated between the Uruguyan coast and the meridians 55° 30′ and 57° 21′ W., and to the South to the limit of the River Plate with the Argentine Republic (Law 14.145/74 "Treaty of Limits of the River Plate").
With the exception of the areas of water included:
(a) Between the meridians which pass through Punta Sayago and Punta Brava, the coast and the parallel of Latitude 35° 01′ S. (Zone "BRAVO").
(b) Between the meridians 56° 00′ and 56° 09′ W. and the parallel 34° 57′ S. (Zone "OSCAR").
(c) Between the meridians 56° 20′ and 56° 40′ W. and the parallel 34° 56′ S. and the coast (Zone "PAPA").

(2) Zone "BRAVO". Zone of the River Plate included between the meridians which pass through Punta Sayago and Punta Brava, the coast and the parallel of Latitude 35° 01′ S., including the Access Channel to the Port of Montevideo, Foreport, Docks, Channel or Inflammable Cargo Docks (ANCAP).

(b) The Control Centre and Information of the Port of Buceo includes:
(1) Zone "OSCAR". Zone included between the meridians 56° 00′ and 56° 09′ W. and the parallel 34° 57′ S.

(c) The Control Centre and Information of the Maritime Movement of the Port of Santiago Vazquez includes:
(1) Zone "PAPA". Zone included between the meridians 56° 20′ and 56° 40′ W. and the parallel 34° 56′ S. and the coast. It includes the Port, Anchorages and all areas of water.

COMMUNICATIONS FROM THE CENTRE

(a) To the National Administration of Ports (A.N.P.).
(1) Time of arrival of each vessel (ahead of time or delayed).
(2) Movement of tugs.
(3) Information from Masters of vessels on his cargo or changes in his berth.

(b) To the Argentine Naval Prefecture:
(1) ETA of vessels which are going to Argentine Ports or to Coastal Ports.

COMMUNICATIONS TO THE CENTRE.

(a) From the National Ports Administration (A.N.P.)
(1) Designation of berths prior to 1700 hrs. on the previous day.
(2) Tugs and launches for guard and order purposes.
(3) Departures for Deep Sea and Coasting vessels.

(b) From the vessels:
(1) In Zone "ALFA". The Control Centre must be informed during navigation when the following points are passed:
(a) To the West of the Access Channel to the Port of Montevideo.
1. By Middle Channel:
The *Graf Spee*
The Panela Lighthouse
The Uruguayan Banco Ortiz Buoy
The Argentinian Banco Ortiz Buoy
2. By North Channel:
The *Graf Spee*
The Panela Lighthouse
The Jesus Maria Buoy
The Arazati Point
The Puerto Rosario.
(b) To the East of the Access Channel to the Port of Montevideo.
Punta Brava
Isla de Flores
(2) In Zone "BRAVO".
During navigation in the Access Channel:
The Eje Buoy
The Jetty

In both areas of control the communications as designated on the following tables should be effected.

Control Centre and Information of the Maritime Movement of the Port of Nueva Palmira.

LOCATION, INTERNATIONAL CALL SIGN, ADDRESS.

(a) The Control Centre is controlled from the Sub-Prefecture of Nueva Palmira (Position Lat. 33° 52.7′ S., Long. 58° 25.3′ W.).

(b) The International Call Sign of the Control Centre and Information of the Maritime Movement of the Port of Nueva Palmira is CWC 31 and when calling up it is permitted to use "CONTROL NUEVA PALMIRA PREFECTURA".

(c) The Control Centre of the Port of Nueva Palmira is located in the Sub-Prefecture of Nueva Palmira.
The Sub-Prefecture of Nueva Palmira is a dependency of the Prefecture of Colonia (2nd Circumscription P.N.N.).
Telephone No. of the Control Centre – 139.
Address – Port Area – Nueva Palmira – Department of Colonia.

AREAS OF CONTROL

(a) The Control Centre and Information of the Maritime Movement of the Port of Nueva Palmira cover:

(1) Zone "ECHO". Zone of the River Plate and the River Uruguay is marked by the meridian 58° 12.5′ W., (Punta Martin Chico Km. 101) and the parallel 33° 30′ S., (Punta Amarillo Km. 46) and the middle line equidistant from both coasts with the exception of the Port of Nueva Palmira and the area of water limited by the port constructions (zone "FOX-TROT").

(2) Zone "FOX-TROT". The Port of Nueva Palmira and the areas of water limited by the port constructions (official quay, the Bed of the Company Navigen and the Higueritas Dock).

COMMUNICATIONS TO THE CENTRE:

(a) From Vessels:
(1) In zone "ECHO", the Control Centre must be informed during navigation of the following crossings:
Km. 101 (Punta Martin Chico),
Km. 121 (Sola Island).
Puerto Nueva Palmira.
Km. 22 (Punta Arenal Grande).
Km. 46 (Punta Amarilla).

In both Areas of Control, the communications as shown in following tables must be effected.

Control Centre and Information of the Maritime Movement of the Port of Paysandu.

LOCATION, INTERNATIONAL CALL SIGN, ADDRESS:

(a) The Centre is controlled from the Prefecture of the Port of Paysandu, located in the main Customs building (32° 18′ 06″ S., 58° 05′ 08″ W.).

(b) The International Call Sign of the Control Centre and Information of the Maritime Movement of the Port of Paysandu is CWC 32, and when calling up it is possible to use "CONTROL PAYSANDU PREFECTURA".

(c) The Control Centre and Information of the Maritime Movement of the Port of Paysandu is a dependency of the Prefecture of the Port of Paysandu (6th Circumscription P.N.N.).
Telephone No. of the Control Centre – 3099.
Address – Presidente Viera and Avenida Brasil – Paysandu (City).

CONTROL AREAS:

(a) The Control Centre and Information of the Maritime Movement of the Port of Paysandu covers:

(1) Zone "MIKE". The area of the river Uruguay marked by the parallel 32° 50′ S. (Roman Island) and parallel 31° 53′ S. (the mouth of the Malo Stream Km. 257 approximately) and the middle line equidistant from both sides with the exception of the zone included between the parallel 32° 20′ S. (the mouth of the Stream "Sacra") and the parallel 32° 14′ S. and the mouth of the Stream "San Francisco". (Zone "NOVEMBER").

(2) Zone "NOVEMBER". The area of the River Uruguay limited by the parallel 32° 20′ S. which passes through the mouth of the Stream "Sacra" up to parallel 32° 14′ S. which passes through the mouth of the Stream "San Francisco".

COMMUNICATIONS AT THE CENTRE:

(a) From vessels:

(1) In zone "MIKE" – The Control Centre must be notified during navigation when the following crossings are made:

Km. 140 (Roman Island)
Km. 160 (San Javier)
Km. 183 (Concepcion del Uruguay)
Punta "N" Almiron Island
Puerto Paysandu
International Bridge "General Artigas"
Punta Piedras
Arroyo Malo

In both Areas of Control the communications are shown in the following tables.

THE BRIDGE ZONE.

All vessels of 100 tons or more gross registered weight must comply with the following instructions:

(a) Navigation both by day and night in both directions will be made under the bridges by the marked channel, in the central arch, between piles 11 and 12 in the bridge "General Artigas".

(b) It is prohibited to cross or overtake between Kms. 208 and 211. For this purpose the following passage priorities are established:

(1) Those navigating downstream over those navigating upstream.

(2) Convoys with a tug either pulling or pushing have priority over all vessels which include those that are navigating downstream.

(c) The vessel or convoy which has to give way will wait outside the limits indicated in point (b). Between those limits it is prohibited to anchor for any cause, even though the channel is left free.

(d) Between the limits indicated in point (b) – speed must be reduced to the minimum compatible with good steering and manoeuvring.

(e) In the zones included between the limits indicated in point (b) – it is prohibited to effect any form of dredging operation across the whole width of the river.

Control Centre and Information of the Maritime Movement of the Port of Punta del Este and Piriapolis.

LOCATION, INTERNATIONAL CALL SIGN, ADDRESS:

(a) The Centre is controlled from the Prefecture of the Port of Punta del Este (Lat. 34° 57′ 48″ S., Long. 54° 57′ 06″ W.).

(b) The International Call Sign of the Control Centre and Information of the Maritime Movement of the Port of Punta del Este is CWC 34. For calling up purposes it is possible to use "CONTROL PUNTA DEL ESTE PREFECTURA".

(c) The Call Sign of the Control Centre of the Port of Piriapolis is CWC 33.
For calling up purposes it is possible to use "CONTROL PIRIAPOLIS PREFECTURA".

(d) The Control Centre of the Punta del Este is located in the Prefectura of the Port of Maldonado (3rd Circumscription P.N.N.).
Telephone No. of the Control Centre – 4.18.84.
Address – Calle 8 and 13 (Department of Maldonado).

(e) The Control Centre of the Port of Piriapolis is located in Sub-Prefecture of the Port of Piriapolis (3rd Circumscription P.N.N.). The Sub-Prefecture of Piriapolis is controlled by the Prefecture of Maldonado.
Telephone No. – 18.
Address – Avenida Piria and Calle Maipu (Piriapolis).

ZONES OF CONTROL

(a) The Control Centre and Information of the Maritime Movement of the Port of Punta del Este covers:

(1) Zone "GOLF". Zone of the River Plate, Atlantic Ocean (Territorial Sea) situated between the meridians 55° 30′ and 54° 15′ Longitude West, the imaginary line which joins the Punta del Este with Punta Ballena and in the South by the continuation of the limit of the River Plate with the Argentine Republic and the Territorial Sea (Law 14.185/974 "Treaty of the Limits of the River Plate"), with the exception of the extent of water included between meridians which pass through Punta Iman (55° 16′ 08″ W.) and Punta Raza (55° 14′ 00″ W.) and the meridian of 34° 56′ 30″ S. (Zone "TANGO") – Piriapolis.

(2) Zone "HOTEL". The Bay of Maldonado and the Port of Punta del Este.

(a) The Bay of Maldonado: Zone situated between the coast and the imaginary line which joins Punta del Este with Punta Ballena, includes also "Boca Grande" and "Boca Chica".

(b) The Port of Punta del Este: Zone situated between the coast and an imaginary line which goes from the end of the jetty to a point which limits to the North of the Mansa Beach. It includes all the mooring areas.

(b) The Control Centre and Information of Maritime Movement of the Port of Piriapolis comprises:

(1) Zone "TANGO". Zone of the River Plate included between the parallels which pass through Punta Iman (55° 16′ 08″ W.) and Punta Raza (55° 14′ 00″ W.) and the meridian 34° 56′ 30″ S.

(continued from page 1852)

COMMUNICATIONS TO THE CENTRE

(a) From Vessels

(1) In zone "GOLF". The Control Centre must be informed during navigation when the following points are passed:
The Isla de Lobos (Wolf Island)
The Punta del Este Lighthouse.

(2) In zone "HOTEL". During navigation in the Access Channel and within the Port:
When the Bajo del Monarco Buoy is passed, and
When the Isla de Gorriti Small Lighthouse is passed.
Also within both Control areas the communications indicated in the following tables must be effected.

(b) From the Hydrographic Directorate of MTOP.

(1) The place assigned for berthing or mooring.

(2) Guard and order tugs (when they are present).

Key to Literal and Numerical References used in the Coastal Station Nomenclature

(a) To transmit meteorological bulletins in accordance with the requirements of List VI of RR of the UIT. Special services which are offered by the FC, FP, FT and FW of the P.N.N.

(b) To transmit Notices to Mariners in accordance with requirements of List VI of the RR of the UIT. Special services which are offered by the FC, FP, FT and FW of the P.N.N.

(c) To transmit medical advice on request of navigators.

(d) To transmit urgent messages to Mariners immediately on receipt and to repeat them 3 minutes past every hour and at the normal times of transmission of messages to navigators.

(e) To participate in operations of Search and Salvage.

(f) To alert the Centre's Co-ordinator of Search and Salvage.

(g) To direct the system of Control Centres and Information of Maritime Movement and Port Operations. (FP, FT and FW).

(h) Receive meteorological observations (SHIP) made on the high seas by Masters of vessels.

(i) To effect special transmissions relating to hydrographic and mareographic Information.

(m) To receive reports from fishing vessels (National, Argentine and third nations who are authorised to operate within the area) and to remit them to the Director of the Control Centre System (CONDI) obligatorily in accordance with Maritime Legislation No. 6 P.N.N.

(n) To effect control and facilitate information within the area, receiving reports from vessels navigating within it (obligatory for vessels in accordace with IMP Uruguay).

(o) Effect control and facilitate the supply of information from the port.

(p) Receive by telex or radio requests for pilotage service.

(q) Radiogoniometric Service on VHF (RG).

1. Call up and listening service on a permanent basis and for announcing in advance the intention to transmit.
2. Frequency used for the transmission of meteorological bulletins and Notices to Mariners in accordance with requirements of List VI of the RR of the UIT. Special services offered by FC, FP, FT and FW of the P.N.N. with prior announcement on frequency 156.800 MHz (Channel 16).
3. Frequency used for the transmission of meteorological bulletins and Notices to Mariners in accordance with requirements of List VI of the RR of the UIT. Special services offered by the FC, FP, FT and FW of the P.N.N. with prior announcement on frequency 2182 kHz (Simplex) and 4419.4 kHz (Duplex C.421).
4. Frequency used for the transmission of radiomedical advice on request.
5. Frequency used for operations of Search and Salvage.
6. Frequency used for reports from national fishing vessels.
7. Frequency for Coastal working purposes.
8. Frequency used in common with the Argentine Republic (Naval Prefecture) for the control of fishing vessels of both nations.
9. Provisional working frequency.
10. Working frequency for control and zonal information (Vessel Movement Service).
11. Working frequency for control and Port information (Port Operation Service).
12. Port operation frequency (tugs, traffic launches, tugs and control centres).
13. Duplex frequency Band from 4 to 23 MHz of the Mobile Maritime Service Section 17 REV. RR of the UIT.

CO – Station open exclusively to official correspondence.
CR – Station open to restricted public correspondence.
H24 – Continuous service, day and night.
HX – Intermittent service, day and night or station which has no fixed operating timetable.

SPECIAL SERVICES

Nomenclature of Radiodetermination Stations and Stations which offer Special Services with the P.N.N.

Name of the Station	*Symbol*	*Identity of the Station*	*Trans-mission frequencies (kHz – MHz)*	*Type of Trans-mission*	*(GMT) Hours of Transmission*	*Service (See key in next column)*

METEOROLOGICAL BULLETIN

(Forecast of weather within the 4 Maritime Areas)

1. SYNOPIS: Inform in clear Spanish text for the 4 Maritime Areas No. 1, 2, 3 and 4 stating:
   (a) General
      1. Name of Station
      2. Validity
      3. Significant Phenomena
      4. Weather Notices
      5. Synoptic Situation
   (b) By Area
      1. General Conditions (Phenomena or general character of the current weather)
      2. Winds (direction and speed)
      3. Sky
      4. Horizontal visibility
      5. Air temperature
      6. Strength of the sea
      7. Wave height
   (c) Reading of radio messages for Coastal Traffic and Radio Messages for local purposes (Notices to Mariners) per area.
2. Messages concerning water height.
3. Offer on request of a vessel, a weather forecast, height of water and local radio messages (Messages to Mariners).
4. The station transmits at any time meteorological safety messages preceded by the Safety signal (SECURITE) and repeat them after periods of silence and during normal transmission periods.
5. Meteorological bulletins, radio notices for coastal traffic (Notices to Mariners) and local Radio notices (Notices to Mariners), announcing the fact previously on frequency 2182 kHz, 4125 kHz Simplex and 4419.4 kHz (C.421) Duplex.
6. Meteorological bulletins, radio messages for coastal traffic (Notices to Mariners) and local Radio messages (Notices to Mariners) announcing the fact previously on Channel 16 (156.800 MHz).
7. For services being offered, listening and working frequencies see Nomenclature of Coastal Stations.
8. Radiogoniometric station on VHF.
   (Station of Radiodetermination which uses the receipt of radioelectric waves to determine the direction of a station or of an object).

COLONIA: 34.28 S. 57.51 W. (See Plan)

LOCATION: Lat. 34° 28′ 28″ S., Long. 57° 50′ 38″ W.

On the River Plate 92 miles from Montevideo and 27 miles in a straight line E.N.E. of the City of Buenos Aires.

DOCUMENTS: Vessels entering the port must provide the following: Machinery, Hull, Safety, Freeboard and Derat Certificates, Stores List, Crew List, List of Passengers or Negative, Cargo Manifest, Declaration of Transport of Inflammables or Explosives, or where not carried a certificate to that effect.

PILOTAGE: No port or river Pilot is required for coasting vessels.

ANCHORAGES: In the Roads with a depth of 10 ft.

In the foreport with a depth of 8 ft., for shallow draft vessels.

RESTRICTIONS: The port will be closed for all vessels when the wind intensity is 70 knots or more. Also all operations are prohibited in the port shelter area.

The port will be closed for vessels of all kinds when the visibility is 500 m. or less due to fog, squalls, etc. Under these conditions vessels are prohibited to carry out any kind of operation within the shelter area.

HEALTH: Inspection is by a Health Doctor, and is carried out jointly with Immigration, Police, Customs, and Naval Prefecture officials.
RADIO: VHF equipment. Operates permanently on Channel 16.
VHF: All communications are carried out by VHF, the call sign being CWC 23 and that for working Control Colonia Prefecture. Channels used are 6, 8, 9, 11, 12, 14, 15, 16, 25, 26, 68, 69.

The Control Centre listens out permanently on Channel 16, whose frequency is 156.800 MHz.
RADAR: Range 16 miles. Does not give service to vessels.
TUGS: There is no tug service.
BERTHING: Union Quay: Running East to West with a length of 178 m., equipped at its two ends with ramps for landing and shipment of cars and lorries.
Coastal Quay: Running North to South, with a length of 111 m.
Ultramar Quay: Running North to South, with a length of 142 m.

These quays are provided with water hydrants and electricity supply points, the Coastal Quay also having a fuel point for operation of tankers.
Warehouses: For general cargo, the National Port Administration has warehouses within the port area.
CRANES: On the Overseas Quay there are two mobile cranes on rails, with 3 tons and 5 tons capacity.
STEVEDORES: There is no permanent service of stevedores, and such requirements must be applied for in advance by the ships' agents at Nueva Palmira.
MEDICAL: 300 m. from the port is the local hospital with a First Aid room and ambulances.
FRESH WATER: Supplied by the National Port Administration.
FUEL: Supplied by road tankers.
FIRE PRECAUTIONS: There is a fire fighting pump with a pressure of 8 kg./sq.cm.
TANKERS: Operate at the Coasting Quay with a watchman and a fireman on board.
CONSULS: Argentina and Italy.
REPAIRS: Not possible.
GANGWAY/DECK WATCHMEN: There is a watchmen service administered by the Prefecture of Colonia.
CUSTOMS ALLOWANCES: Tourists from neighbouring countries may bring in: 5 kilos of food, 1 carton of cigarettes, 1 litre of alcoholic drink.

No products derived from meat can be brought into the country (cold meats, sausages, etc.), nor any plants or seeds.
REPATRIATION: Only to Buenos Aires.
AIRPORT: Located on Highway 1 linking Colonia with Montevideo, 7 km. from Colonia.
TIME: Local time is GMT minus 3 hours.
HOLIDAYS: 1st and 6th January, Carnival, Touriso, 19th April, 1st May, 18th May, 19th June, 18th July, 25th August, 12th October, 2nd November, 25th December.
POLICE/AMBULANCE/FIRE: Police Tel: 2962; Hospital Tel: 2994; Fire Brigade Tel: 2577; Prefecture 2020.
TELEPHONES: No arrangements for connecting the telephones on board vessels, but there are telephone boxes for communications within and outside the country.
SERVICES: Bureau de Change via a branch of the Banco Republica. There is a bus service with international service, working in conjunction with arriving and departing vessels, connecting Colonia with the rest of the country.
Post Office: 200 m. from the port.
Mooring Gangs: Provided at the request of the ships' Agents by the National Port Administration.
AUTHORITY: Prefectura del Puerto de Colonia.

FRAY BENTOS: 33.06 S. 58.18 W. (See Plan)

LOCATION: Km. 95 River Uruguay. On the right bank of the River Uruguay from seaward 213 miles by river from Montevideo or 145 miles from Buenos Aires.
PORT LIMITS: A vessel is considered to have arrived when she leaves the channel and goes to the berth.
DOCUMENTS: Same requirements as for the port of Montevideo.
PILOTAGE: Obligatory, except where bilateral national agreements exist concerning navigation of the River Uruguay, and the Pilot must be taken on board in Montevideo.
ANCHORAGE: Between the channel and the port.
RESTRICTIONS: When the port is closed due to bad weather, also the draft depends upon the depths of water in the "El Marques" and "Punta Caballo" passages.
MAX. SIZE: Controlled only by the draft of the vessel and the length of the berth. Max. draft 26 ft. (FW), water depends upon the river conditions.
HEALTH: Same requirements as for Montevideo.
RADIO: The call sign is CWC 25 "Control Fray Bentos Prefectura".
VHF: Port works on the following frequencies:

a) Channel 16: frequency 156.800 MHz; Usage: Calling-up and safety.
b) Channel 9: frequency 156.450 MHz; Usage: Port operations.
c) Channel 11: frequency 156.550 MHz; Usage: Central Control broadcasts on safety.
d) Channel 13: Frequency: 156.650 MHz; Usage: Same as Channel 11.
e) Channel 15: frequency: 156.750 MHz; Usage: Meteorological bulletins and Notices to Mariners.
f) Channel 17: Usage: P.N.N.: Maritime Safety.
g) Channel 68: Usage: P.N.N.: Maritime Safety.

Furthermore, on entering the area between Km. 6 and Km. 165 of the River Uruguay, the vessel must communicate to the Fray Bentos Prefecture Control:

a) flag.
b) name.
c) destination.
d) position.
e) course and speed.
f) max. draft.

And on leaving this area:

a) accident or fire occurred on board the vessel.
b) whether vessel has given assistance to another vessel which is damaged or in difficulties.
c) whether she has sighted any dangerous object to navigation and which is not marked.
d) any serious reduction in visibility.

RADAR: None.
TUGS: None.
BERTHING: There are two types, quays for deep-sea vessels and for coasters, both being of cement and wood.

Type	Deep-sea	Coasting
Length	125 m.	250 m.
Direction	East – West	N.W. – S.E.
Average depth	7 m. – 8 m.	5 m. – 6 m.
Signalling lights	Green light – West side Red light – East side	
Fresh water	2 connections	3 connections
Electricity	1 point A.C., 3-phase 220 V. South side quay in shed 3 points 220 V. D.C. (cranes)	3 points 220 V. D.C. (cranes)

Also there is the Anglo Quay with a maximum depth of 26 ft., normally used for meat.
CRANES: There are in the port 3 cranes of 3 tons each and 1 of 5 tons which can move about the port. It is possible to use ship's derricks and shore cranes at the same time.
BULK HANDLING FACILITIES: There is a silo with a conveyor belt, having a storage capacity currently of 14,500 tons, and the conveyor has a loading or discharge rate of 100 t.p.h. See "Developments".
SPECIALISED CARGO HANDLING FACILITIES: None.
BRIDGES: None.
STEVEDORES: Can be requested in advance or when the vessel arrives in port. The work is controlled by the following time table: order 0630 hrs., commence work 0700 hrs.; order 1230 hrs., commence work 1300 hrs.; order 1830 hrs., commence work 1900 hrs.
MEDICAL: Doctors and hospital facilities available.
DENSITY: 1000.
FRESH WATER: On the Deep Sea Berth there are 2 connections and on the Coasting Quay there are 3 connections controlled by the ANP. Cost of U.S. $1.20 per 1,000 litres.
FUEL: Not available.
FIRE PRECAUTIONS: Fire Brigade present.
CONSULS: Argentina, others at Montevideo.
REPAIRS: Only minor repairs can be carried out.
DRY DOCKS: None.
SURVEYORS: None.
GANGWAY/DECK WATCHMEN: Same as for the port of Montevideo.
HATCHES: If steel, handled by vessel's crew. If wooden, handled by stevedores.
REPATRIATION: See "Montevideo".
AIRPORT: None, only Montevideo.
TIME: See "Montevideo".
HOLIDAYS: The following dates will be used as national holidays of a traditional character:

1st January; 6th January; Monday and Tuesday of Carnival Week; the 6th week following Carnival, which will be called Tourism Week; 1st May; 2nd November; 25th December.

The following dates will be celebrated as national holidays as they are linked with patriotic exaltation and commemoration.

19th April; 18th May; 19th June; 18th July; 25th August; 12th October.

With regard to the holidays of 1st May, 19th April, 18th May, and 12th October, these will follow the undermentioned plan:

(a) If they occur on Saturday, Sunday or Monday, they will be observed on those dates.

(b) If they occur on Tuesday or Wednesday they will be transferred to the immediately preceding Monday.

(c) If they fall on Thursday or Friday, they will be transferred to the Monday immediately following.

POLICE/AMBULANCE/FIRE: *National Prefecture:* Tel: 321. *Police:* Tel: 201. *Fire Brigade:* Tel. 35. *Hospital:* Tel: 533.
TELEPHONES: Not possible.
SERVICES: None.
SHORE LEAVE: See "Montevideo".
IDENTIFICATION: Seaman's Book sufficient.
DELAYS: Normally there is no delay.
DEVELOPMENTS: Increase in the storage capacity of the silos of the Ministry of Agriculture and Fisheries by 5,500 tons, and increase of the capacity of the conveyor belt to 400 t.p.h.
AUTHORITY: National Port Administration, Herrera and 25 de Mayo, Fray Bentos, Uruguay. *Tel:* 284.

JOSE IGNACIO: 34.54 S. 54.43 W.

SBM: Position Lat. 34° 53′ 43″ S., Long. 54° 42′ 45″ W.

PILOTAGE: Compulsory. Pilot boards at the Fairway Buoy in position Lat. 34° 57′ 14″ S., Long. 54° 40′ 06″ W.

RADIO/VHF: Call sign "Control Punta del Este", Continuous watch on VHF Channel 16. Intership working on Channel 6.

GENERAL: ANCAP have installed a Single Buoy Mooring, 3,600 m. from the shore in 16.8 m. (55 ft.) depth of water. Vessels of 150,000 d.w.t. can be handled and the average rate of discharge of crude oil is 5,000 cu.m./hr.

The shore terminal receives, stores and pumps the crude to the refinery at Montevideo.

A River Pilot must be ordered from Montevideo for securing to the buoy, and he remains aboard until the vessel sails.

Five days before arrival, Agents must request Free Pratique from the Health Authorities in Montevideo, and the Customs, Prefecture and Immigration Officials, from Punta del Este.

AUTHORITY: Prefectura del Puerto de Maldonado, Calle 8 y 13, Punta del Este (Maldonado), Uruguay. *Tel:* 41884, 41967. *Contact:* Port Captain.

MONTEVIDEO: 34.55 S. 56.13 W. (See Plan)

Also see "General" at beginning of Uruguay section.

APPROACHES: The Roads of Montevideo consist of the Outer Roads situated to the South of the bay and Inner Roads situated outside the Western breakwater.

Both anchorages are very exposed and vessels are recommended to enter the anteport.

The entrance channel has 30 ft.; the channel to Ancap's wharf (La Teja) 30 ft. 6 in. Basins 1 and 2 have a depth of 28 ft. to 31 ft., and the River Traffic Basin, 15 ft. These depths depend on dredging being maintained, but even so vessels often "drag" when on the higher marks; the bottom is fine soft silt.

DOCUMENTS:

Health:

Maritime Declaration of Health.
1 List of Passengers Disembarking.
1 List of Crew Members.
1 Derat Certificate.
1 List of Crew International Vaccinations.

Immigration:

1 Copy of Crew List.
2 Lists of Passengers Disembarking.
2 Copies of List of Passengers in Transit.

Police:

2 Copies of List of Passengers Disembarking.
1 Copy of Crew List.
2 Lists of Passengers in Transit.

Prefecture:

2 Lists of Passengers in Transit.
1 Visaed Copy of List of Passengers with Port of Origin.
2 Non-visaed Copies of List of Passengers.
1 Passenger List – or Negative – from all ports visited.
1 Non-visaed Crew List.
1 Cargo Manifest for Montevideo.
1 Manifest for Cargo in Transit.
1 List of Inflammable Cargo or Hazardous Goods – visaed or straight.
1 List of Vessel's Data.

Customs:

1 Visaed Manifest
1 Copy of Ballast loaded at each port.
1 Negative discharge statement for each port.
If there is no Consul in previous ports, the last port where there was one.
2 Stores Lists.
2 Lists of Cigarettes and Whisky.
2 Lists of Personal Effects.
3 Lists of Bunkers on Arrival.
1 copy of Passenger List for those disembarking, or negative, and their baggage in the same list (drawn up and signed by the passengers themselves).

Agents:

2 Lists of Passengers Disembarking.
2 Lists of Passengers in Transit.
2 Crew Lists.
2 Stores Lists.
2 Manifests, including Inflammable Cargo.
2 Cargo Plans.

NOTE: The manifest must have a special section with all effects in transit or otherwise, for the free zones of Colonia and Nueva Palmira.

Crew Lists, amended Crew Lists and Inflammable Cargo Lists must be visaed at ports of sailing or loading.

ANTEPORT: The Anteport is to the North of the entrance, between the breakwaters, and has 30 ft. – 31 ft. Sufficient room for 10 vessels, depending on size.

PORT: The port is formed by the North side of the Montevideo Peninsula and the "Dique de Cintura", a breakwater running parallel to the coast, about 840 m. distant.

It consists of 3 basins, 2 of which are for ocean-going vessels and 1 for river traffic.

Basins 1 and 2 have a depth of 30 ft., and the basin for river traffic 15 ft.

PILOTAGE:

1. The Pilot must be requested via the Agent 24 hours in advance, giving ETA in the roads by W/T (Cerrito Radio – CWA on frequency of 500 kHz). It is not possible to elect a Pilot for the area of the port of Montevideo, except where the vessel exceeds 10,000 tons.

2. On entering into the system of the Control Centres, communication must be made with them, giving the information laid out in the "Basic Rules of the System of Control and Information of Maritime Movements". See "Control" in General Section before first Uruguay port.

3. By VHF on the Channels stipulated in "Basic Rules of the System of Control and Information of Maritime Movements".

4. Channel 11 must be used to communicate with the pilot vessel. The vessel is a powered craft painted reddish orange, with white deckhouse with the inscription "Practicos". During daylight hours, it flies the pilot flag, HOTEL (white and red), and at night it is necessary to have white and red lights indicating "I have a Pilot on board". Where a vessel does not have VHF, light signals must be used to communicate with the pilots' launch.

Should this launch be out of service, Pilots are transported by tugs of A.N.P. and/or REYLA.

5. The Pilot will await the vessel near the Axis Buoy located at Lat. 35° 00′ S., Long. 56° 14′ W.

6. In the event of bad weather the vessel must anchor near the Axis Buoy.

7. To take the Pilot on board, the gangway must be positioned on the side which gives most advantage *vis-a-vis* wind and sea.

ANCHORAGE: Vessels may anchor near the Axis Buoy with a draft of 30 ft. at zero tide. The sheltered anchorage is located in the foreport inside the shelter of the breakwaters. To gain access to it, the Pilot must be on board and the permitted draft will be that specified previously.

RESTRICTIONS:

1. The port is closed when winds are up to 70 km.p.h. However, up to 80 km.p.h. the Prefecture may authorise manoeuvres. The port is also closed when there is fog, channel obstruction or any other problem which may make manoeuvring difficult.

2. Vessels will not be handled when there is serious damage to engines, hull or rudder.

MAX. SIZE:

1. The largest vessels operating in the port, are of the LASH type, with dimensions approx. as follows:
Overall length 272.22 m.; Beam 30.48 m.; Draft 28 ft.

2. Tankers which berth at the inflammable dock A.N.C.A.P.:
Overall length: 241.50 m.; Beam 32.33 m.; Draft 28 ft.

With regard to the dimensions of the vessel, the state of the tide and time will be considered, the Pilot will advise the Master of the best measures to adopt.

Report: March 1982.

Max. draft to reach Montevideo safely is 31 ft.

HEALTH: The procedure is as follows:

1. Request the Owner or Agent to obtain Free Pratique which will be done via Cerrito Radio Station – call sign CWA.

In the event of there being any suspected illness or fever on board, the vessel must anchor in the roads to await instructions, at the same time communicating this to her Agent/Owner.

RADIO: Cerrito Radio Station CWA operating on 500 kHz, 421.5 kHz, 4346 kHz, 6434.5 kHz, 8602 kHz, 12750 kHz, 17208.8 kHz and 22563 kHz.

Timetable for broadcasting information to Mariners:

	Frequency	*Times*
Cerrito	4,346 kHz	1100 hrs.
CWA	8,602 kHz	1600 hrs.
	12,750 kHz	2100 hrs.
	16,871 kHz	
Sodre (CX 6)	650 kHz	0900 hrs.
Coastal Station		
Punta Carreta	2,768 kHz	1103 hrs.
CWD		1603 hrs.
		2103 hrs.

RADAR: Port Radar Control available. Additional coastal radar stations to be installed.

VHF: The Control Centre has a range of 60 miles on VHF. It also effects communications by "Phone-Patch" between the vessel and or Agent or Owner; this, from their office or private address.

All the operations of the Centre of Control and Information of Marine Movement of the Port of Montevideo are set out in the booklet "Basic Rules of the System of Control and Information of Maritime Movements".

On entering waters of port jurisdiction, communication must be made with La Paloma Control, then Punta del Este Control and the Centre of Maritime Control of the National Naval Prefecture.

TUGS: Tugs come alongside in the foreport. Lines are to be supplied by the vessel, and this is not optional. In the event that the vessel has no tug cable, this will be supplied by the tug at a cost of approx. US $47.

BERTHING: The berth will be allocated by A.N.P. and is to be requested by the Agent. Vessels may berth or unberth at any time of the day or night, except when the port is closed or due to lack of available berths. Generally, there are fenders placed along the berths. In the event that the vessel requires this service, it must be requested in advance via the Agent.

When berthing or unberthing, the gangway must not be in position due to the proximity of the cranes.

Anteport: 7 anchorage berths in 28 ft. depth. However in practice there is rarely room for more than 5 vessels to anchor. Basin No. 1: 7 berths, 28 ft. to 33 ft. depth alongside. Basin No. 2: 4 berths, 28 ft. to 33 ft. depth alongside. La Teja: Ancap basin with berths for 2 tankers 30 ft. depth in basin and entrance channel.

Berths are allotted by the Port Authorities in the order of arrival of the vessels and according to their category, as follows:

1. Mail vessels.
2. Regular Line vessels carrying immigrants.
3. Cargo vessels.
4. Sailing vessels.

The Authorities allocate the deposit at which vessel must discharge or load.

Port Authorities give preference at Deposit No. 10 to ships operating with refrigerated cargo from this Deposit; and at Deposit No. 11 (Florida Wharf) to tankers discharging to the pipe-line situated there. Conditional that they vacate the berth within 2 hours' notice, to permit berthing a preference vessel, other ships may operate at either berth.

Muelle de Escala: On the pier head, formed by the Southern side of the River Traffic Basin, and running Westwards, a quay has been built, known as "Muelle de Escala", 288 m. long, originally constructed for berthing passenger liners and war vessels, but now only used by cargo vessels, loading and discharging, when there is port congestion. There are no shore cranes and work is very slow, nor are there shore deposits. A fixed heavy lift boom capacity 200 tons is placed at the East end.

The berth is very exposed to wind and swell, and Masters are recommended to take every precaution to ensure their vessels are strongly moored and a lookout kept for changes of weather which, locally, are very sudden.

The depth of water alongside depends on dredging, but generally is over 28 ft.

1×40 tonne container gantry crane installed June 1986.

Also see "Developments".

River Traffic Basin: This basin is situated on the Western side of Pier "A". It is 400 m. long and has a passenger landing station on one side. The opposite side of the basin is used for coastal vessels, but mainly by the Navy.

2 warehouses, called Warehouse "A" and Warehouse "B", have been built on the East side of this basin and are serviced by 3 electric cranes. In addition, there are on the quay a 1.5 and 6 ton steam crane, which are employed when necessary.

These berths can only be used by light-drafted vessels, as depth of water is around 16 ft.

Basin No. 1: This basin is situated between piers "A" and "B". Its entrance between the "Dique de Cintura" and the pier head "A" is about 150 m. wide. It encircles a total mooring space of 1,093 linear metres and 7 vessels can comfortably berth along the quay walls.

Pier "A" is 501 m. long on the West side; 306 m. on the East side, and 50 m. wide at the Northern pier-head.

On this pier 2 brick and concrete warehouses, Nos. 1 and 2, have been constructed, consisting of a ground floor, 3 storeys and a basement.

On the City side of Basin 1, there are 3 brick warehouses, numbered 3, 4 and 5, consisting of a ground floor of between 17,800 cu.m. and 19,600 cu.m. capacity.

On the Western side of Pier "B" facing Basin No. 1, there are 2 brick and concrete warehouses, Nos. 6 and 7, with a ground floor and 1 storey having a capacity of 30,174 and 33,140 cu. m. respectively.

In Basin No. 1, berths Nos. 1, 2, 3, 4 and 5 are generally used for the discharge and/or loading of liners running to timetable.

Depths alongside vary, as it depends upon dredging, but generally are 26 ft. to 30 ft.

Basin No. 2: This basin is situated between Pier "B" and the foot of Florida Street. The entrance to this basin is also about 150 m. wide. It has a total mooring space of 722 m. and it can accommodate 4 vessels.

Pier "B" is 294 m. long on the Western side, 328 m. long on the Eastern side, 148 m. at the Northern pier-head and 13 m. wide on the bend at the Western corner of the pier-head.

At the Northern end of pier-head "B", livestock is embarked. This berth is also used for general cargo operations in times of congestion. Moorings must be strong and carefully watched as the berth is very exposed to wash of passing vessels.

There are 2 warehouses on this pier, numbered 8 and 9, facing Basin No. 2, built of brick and concrete, with a ground floor and 1 storey and with a capacity of 33,320 cu.m. each. On the city side, there are 2 warehouses, built of brick, numbered 10 and 11, consisting of a ground floor with a capacity of 15,362 cu.m. each. Warehouse No. 10 carries an additional storey, and is being used for refrigerated cargo. Vegetable oils can also be loaded at Warehouse 11 berth ex-pipe-line from 4 storage tanks each of a capacity around 1,250 tons, in the vicinity.

Depths of water alongside vary, depending upon intensity of dredging but are generally 28 ft. to 30 ft.

Coasting Quay Wall: From Florida Street to Mole F, which is the end of the Port, and over a distance of 1,900 m., there is a quay used for coastal craft, and on part of which a fish-receiving and industrialising plant is being opened; depth in this zone is 15 ft.

A floating dock is also anchored in the N.E. part of this section.

Basin For Inflammables "La Teja". (Also see "Tankers".)

On the North side of the Bay, the National Administration of Alcohol, Cement and Fuels, known as A.N.C.A.P., has a basin with concrete walls for the discharge of tankers arriving with oil to their consignment. This basin is known as the "Darsena de Inflamables", and has 1 berth for tankers on the North side in 30 ft. 6 in. and for liquid gas discharge on the Southern side, max. draft 22 ft., while on the West or land side there is a berth for coastal vessels. Width of the basin here is 147 m., which is the same as the entrance, while the South berth is 248.75 m. long. On the North berth the jetty protrudes 34 m., and is 96 m. long.

Vessels berth bows to shore, and on leaving turn immediately outside the basin, if draft is less than 22 ft., otherwise they must reverse back down the narrow access channel.

The North berth has separate lines for Crude, 10 in. and 12 in. maximum pressure 105 lbs. Fuel oil, 8 in. and 10 in. with a pumping rate of 300 t.p.h. at temperatures between 40°C and 70°C. Diesel/Gas Oil/Kerosene 6 in. connections and pumping rate of 300 t.p.h. Naptha 8 in. Lube oils 6 in. lines, 150 t.p.h. and a line for Alcohol 6 in. There is no line for Gas. There are 3×5 ton electric cranes and 1×12 ton diesel crane. Coal and Cement are also discharged at this berth, the coal to Decauville cars and the Cement to trucks, handling 750 tons per 8 hour day, with 5 gangs.

At the South berth the oil lines are identical, and there is also a 6 in. connection for loading or discharging Super Gas, at 200 t.p.h. There are no cranes at this berth.

The Western berth has the same installations except for Super Gas and Alcohol.

There are 3 in. water lines at each berth, and use of 2 tugs is essential for berthing or unberthing. At the North berth, vessels fully loaded often lie up to 15 m. out from the quay, owing to accumulation of mud, and will gradually close in as the vessel lightens. Access gangways are placed by the Port.

Railway Connections: Basins 1 and 2, River Traffic Basin and also Deposits "A" and "B" have railway lines on all sides, belonging to the Port Administration, which are connected with the main lines of the Uruguayan State Railways.

The Port Administration has 2 electric locomotives used exclusively in the port.

Cranes: The Port Administration has 1 heavy-lift floating crane of 80,000 kilos, a mobile crane of 20,000 kilos, also 46 movable electric cranes of 5,000 kilos each; 5 movable electric cranes of 1,500 kilos each; 1 fixed electric crane of 4,000 kilos; 33 of the aforementioned 5,000 kilos cranes, are placed alongside the quay walls for vessel's operations.

There are also 24 electric trolleys of 1,500 kilos, and one of 1,000 kilos. There is a fixed crane for 200 tons on Muelle Escala.

Fiscal Lorries: The Port Administration has purchased special lorries and 12 auto cranes for receiving cargo, as the railway wagons available are not sufficient to carry all the cargo that is at present being handled at this port.

Loading Operations: Loading is effected from carts, lorries and/or wagons and the cargo is hoisted on board with the cranes. Cargo is also loaded from lighters.

Grain Loading: There are 2 mobile grain vacuvators, each of which can load bulk grain at around 35/50 t.p.h, also 10 smaller machines that can each load around 20 t.p.h.

Fumigation: Montevideo is the only port in Uruguay at which vessels can fumigate, using the cyanide method. The tariff is per cubic metre fumigated over a basic charge which varies according to n.r.t. There are surcharges for overtime.

Disinfection of Mail Bags: To avoid delay through disinfection mail bags can be fumigated on board in a 10% formalin solution and kept in a closed space for 4 hours before vessel gets into port. The closed space will be opened in the presence of a Health Officer who will verify the use of formalin. When in doubt, fumigation will be carried out again and exposed for 2 hours.

Height of Quay Above Water: Tide being very small, the height of quay above water only varies from 8 ft. – 10 ft. at LW to 10 ft. – 12 ft. at HW. Wind influence is felt even in the bay, as a South wind will raise water as much as 5 ft., or a Northerly wind reduce it 2 ft. or 3 ft.

PORT EQUIPMENT: In process of supply or installed.

Fork-lift trucks – 3 of 5 tons and 1 of 6 tons, to lift to 3 m.

Container lifter – 1 to lift to 22.4 short tons, size 8 ft.×8 ft.×20 ft.

Fork extensions for fork-lift trucks in use – 25 pairs.

Mobile cranes (diesel) – 2 capacity 7.5 tons with telescopic arm up to 10 m., turning through 360°; 8, capacity 7.5 tons, fixed arm; 1 capacity 10 tons with telescopic arm up to 12 m., 360°; 1 truck-mounted crane no less than 60 tons, with arm not less than 21.5 m.

18 electric cranes (installed) × 6 tons capacity.

2 mobile cranes (installed) × 20 tons for containers.

Tender out for 250 ton capacity floating crane.

Pallets – material for making 15,000 pallets, in 2 sizes.

Slings for these pallets, also for heavy-lift cargo for use with the mobile cranes.

Lighters – 7 new lighters, ranging from 100 tons to 400 tons.

2 container cranes "Bellotti" 40 – 60 tons each (installed).

2 container cranes "Kalmar" 24 tons each, with spreader (installed).

1 container crane "Kalmar" 24 tons, with lifter (installed).

STEVEDORES: Working hours: 1st shift, 0700 to 1300 hrs.; 2nd shift, 1300 to 1900 hrs.; 3rd shift, 1900 to 0100 hrs.; 4th shift, 0100 to 0700 hrs.

Normal capacity per gang per hour: *(a)* Rice – about 80/90 tons per gang/hour. *(b)* Meat – about 60/100 tons per gang/hour.

Overtime is compulsory if port is congested.

Lavatory Conveniences for Shore Labour: Each vessel must furnish conveniences for all shore labour employed on board. Work has been stopped until such conveniences are installed. It is advisable, therefore, for vessels calling at Montevideo to be equipped with 2 spare lavatories, 1 for tally clerks and 1 for stevedores, etc.

DENSITY: This varies according to wind and tide (1006 – 1002). The degree of salinity (max. 10 gm. per litre) is broadcast daily in the weather reports by radio, and varies from fresh to brackish to sea water. Steady South winds give the highest degree of salinity.

MEDICAL: Any urgent case must be advised in advance. In normal cases, the Health Service doctor in the port will visit. For this purpose there are Clinics and Hospitals with optional assistance. Vaccination certificates are issued by the Port Health Service. There are also private health and medical services which give on-board treatment.

FRESH WATER: Fresh water is supplied by the Port Authorities at all quay berths. Request must be made through the Agents, vessels supplying their own hoses where possible. It is important that the water meter should be read together with the Port official both at connecting and disconnecting to verify the exact quantity. The cost of water is high. Loading rate 20 cu.m./hr. Water also available by barge (capacity 170 tons) loading rate 18 t.p.h. – 20 t.p.h.

FUEL: This can be taken on board whilst anchored in the foreport via two barges, one of 595 tons delivering at the rate of 250 to 350 cu.m./hr., the other of 310 tons at the rate of 200 to 250 cu.m./hr.

Also available from the Uruguayan tanker "Valiente" (capacity 1,337 cu.m. of fuel, rate of 700 cu.m./hr.) or 196 tons of water at the rate of 70 cu.m./hr. This service can be effected outside the port.

A.N.C.A.P. Information: All grades subject to confirmation, the request being made via the Agent 15 days in advance.

TANKERS: Dirty ballast can be discharged depending on whether or not there is a berth at La Teja, Inflammable Materials Dock. A.N.C.A.P. have the necessary reducers for any type of operation.

Diameter of pipes: Crude – 12 in.
Fuel oil – 8 in.
Dirty ballast – 8 in.

Berth depths: North quay – 29.6 ft.
South quay – 22 ft.
West quay – 14 ft.

GANGWAY/DECK WATCHMEN: Shore watchmen are compulsory. Arranged by Agents. 1 required on deck and 1 for each gangway. Vessels carrying dangerous cargo must also employ a guard of the Prefectura.

Vessels calling for supplies only, for orders, in distress or to land sick crew members or to enter dry dock, need not employ Watchmen. Repairs afloat require a watchman, if they do not carry out commercial operations.

Shifts are of 8 hours, commencing at 0700 hrs. Vessels under repair, and those at ANCAP moles may fix 12-hour shifts, paying a shift and a half.

If special watchmen are required for goods or working equipment, application must also be made to the Union.

If watchmen are needed in the holds, same applies.

Regulations also require a watchmen in the holds wherever the ship has a crew member, cadet or officer permanently on watch to prevent pilferage. However, where ship's personnel are in the hold to watch the stowage of the cargo, no extra watchman is required. Masters should therefore, advise Agents if they intend to place crew members permanently in the holds during discharge, so that Agents can advise the Association before they make their claims.

Care must also be taken on arrival, since the watchman is on duty from 0700 hrs. on, whereas it may be necessary to place the gangway safety net, etc., before that time, so that Pilot may disembark.

Only those involved in this operation should go ashore. The Receiving Commission may ask for the gangway to be opened before 0700 hrs., which is in order, but no one else should use the gangway to avoid claims from the Union.

Vessels lying in the anteport must provide launches for the transport of watchmen employed.

IDENTIFICATION CARDS: The prefecture issues identity cards. Crew not allowed ashore without card.

	Width of pontoon	15.25 m.
	Capacity of operation	2,000 tons

REPAIRS: All kinds of repairs can be effected, either afloat or in drydock.

REPATRIATION: There are facilities for exchanging crews.

AIRPORT: Located 30 minutes away by car. There are various regular services to all parts of the world.

TIME: GMT minus 3 hours. (However changes are possible).

HOLIDAYS: 1st January (New Year); 6th January (Epiphany); 3 days in February (Carnival); 7 days in March or April (Tourist Week); 1st May (Labour Day); 18th May (Battle of the Stones); 19th June (Artigas' Birthday); 18th July (Swearing of the Constitution); 25th August (Declaration of Independence); 12th October (Day of the Race); 2nd November (All Souls'); 25th December (Christmas Day).

On these days, work will always proceed when the Agent or Owner requires it or also if the Port Authority requires it, should there be a number of vessels anchored in the Roads awaiting a berth.

POLICE/AMBULANCE/FIRE: Port Police (Immigration): 95.21.51; Fire Brigade: 91.51.51 to 56 – extensions 139/337. Ambulance: 91.51.51 – extensions 272/382.

Prefecture of the Port of Montevideo: 95.21.27 – 95.21.77, 95.54.05, 95.52.01, 95.22.27, 95.24.27 ext. 07, 91.51.51 ext. 199, 91.93.03, 91.53.71 ext. 199.

TELEPHONES: There are services on all quays. Telephones can be requested by the Agent from the Port Authority.

SHORE LEAVE: Allowed.

DEVELOPMENTS: A container park and fish quay will be built alongside the Eastern Quay and in the Mantaras Zone respectively.

A battery of silos will be constructed at C.M.B. (between Warehouses 7 and 8) which will facilitate the loading and unloading of grain. Sheds 10 and 11 will be equipped with modern refrigeration machinery.

There is a large plan for improvements in equipment, tugs, dredging, etc., for which the A.N.P. (Administracion Nacional de Puertos) (National Port Administration) has received a loan granted by the World Bank.

Report: 1981.

The National Port Administration (Administracion Nacional de Puertos) is building a container terminal with an area of 7 ha. close to the Muelle de Escala.

This berth is at present dredged to 10 m. Its length will be increased from the present 288 m. to 400 m. and the draft increased to 12 m.

The storage capacity will be a maximum 5,000 containers.

The berth will be equipped with 2 container cranes of 40 – 45 tons. Also all necessary equipment ashore for handling containers will be available.

A fishing berth of 320 m. has also been built with 6 m. draft.

SHIPMASTER'S REPORT: July 1983.

Documents: As per "Guide to Port Entry".

Pilotage: Compulsory. Pilot boards at Sea Buoy. 24 hours' notice required.

Anchorages: As per B.A. Chart 2001.

Restrictions: Max. draft 28 ft. Possible to depart/enter 24 hours a day.

Max. Size: Largest vessels using the port are LASH vessels, length 272 m., beam 30 m. – 40 m., max. draft 28 ft.

Health: Inform Agents of vessel's state of health and request Free Pratique.

Radio: Cerrito Radio Station.

VHF: Vessels must abide by Uruguay Regulations as per Radio Signals Volume 6, Part 2 otherwise will be subject to very heavy fines.

As soon as vessel is inside Territorial Waters, i.e., S.W. of a line bearing 128° from Chui Lt. and West of 50° 50′ W., they must report to the appropriate station on VHF.

Pilots and Port operate on Channel 16.

Tugs: Available.

Berthing: Vessel berthed at Darsena/Muella A. Least depth in channel from sea to berth was 30 ft., distance between sea and berth being 6 miles. Mean tidal range at berth is 2 ft. Nature of bottom at berth – mud.

Cranes: Sufficient quay cranes of 4 tons capacity available. One floating crane of 80 tons capacity available.

Equipment and storage available for breakbulk/palletised cargoes.

Stevedores: Government controlled stevedores. Very helpful.

Medical: Doctor and hospital available.

Density: 1002.

Fresh Water: Available.

Fuel: Bunker fuel and diesel oil available.

Repairs: Can be undertaken.

Dry Docks: Available.

Surveyors: Lloyds' Surveyor based at the port.

Airport: Available.

General: Fresh provisions, meats, groceries and laundry services available.

AUTHORITY: Administracion Nacional de Puertos.

NUEVA PALMIRA: 33.53 S. 58.25 W. (See Plan)

LOCATION: Situated on East bank of Uruguay River, 155 miles above Montevideo. Km. 0 on River Uruguay.

DOCUMENTS: The documentation required is as follows:

Cargo or Ballast Manifest.
Negative Passenger List or list of passengers visaed by the Consul.
Crew List.
Stores List.
List of Personal Effects.
Tonnage Register.
Consular Clearance.
Maritime Declaration of Health.

PILOTAGE: The information required from vessels navigating within the area of the Port Control are:

Time of entry and leaving the area.
International call sign.
Name of vessel.
Flag.
Estimated course.
Latitude.
Longitude.
Port of destination.
Estimated time at port of destination or other point of call.

The area appointed for effecting change of Pilots is the Port Roads. The Pilots arrive at the vessel in a launch 5.53 m. overall length, with cabin, painted orange, owned by the Pilots' Corporation of Uruguay.

ANCHORAGE: The area designated for anchoring is located within the roads and fore-port, depth being between 20 ft. and 24 ft.

RESTRICTIONS: There are no restrictions for berthing in the port, except those imposed by weather conditions (winds, etc.). Vessels berth without the aid of tugs.

MAX. SIZE: With regard to length and capacity of vessels, there is no stipulated limit but due account should be taken of the fact that the depth of water in the port is 24 ft.

HEALTH: The Health Authorities will require a Crew List and Maritime Declaration of Health. In the event of disease being detected on board, the Health Official will proceed to inform the Aid Centre who will arrange for a doctor to attend on board, with the vessel placed in quarantine or the patient will be transferred to hospital, depending upon the illness discovered. To date, no such occurrence has arisen in the port.

RADIO: VHF equipment with permanent listening out on Channel 16.

RADAR: There is no radar equipment.

VHF: All communications are effected by means of VHF equipment. The call sign is CWC 31 – "Control Palmira Prefecture", and the following Channels are used: 6, 8, 9, 11, 12, 13, 14, 16, 25, 26, 68 and 69. The station operates permanently on Channel 16, the frequency being 156.800 mHz.

TUGS: The service of a tug is not necessary for berthing vessels.

BERTHING: The port has the Official Quay and the quay owned by Cia. Navigen.

Official Quay: Length 240 m., length of the head 80 m., width in the centre 40 m.

Navigen Co. Quay: Length 234 m. It has a conveyor belt system 500 m. long, running 15 m. above the level of the water. Electrical operating system with a loading and discharge capacity of between 300 t.p.h. and 700 t.p.h., dependent upon whether cereals or ore is being handled.

CRANES: The Official Quay is equipped with 3 cranes of the National Port Administration. They are mobile cranes on rails. Two are for 3,000 kg., and the third is for 5,000 kg.

STEVEDORES: As soon as the vessel communicates the ETA at the port, the Agent will make all necessary arrangements for stevedoring services to commence work as soon as the vessel has obtained Free Pratique. These services will be made available dependent upon the tasks required to be fulfilled.

MEDICAL: The local Public Health Aid Centre is entrusted with furnishing any medical aid which may be necessary on board.

BULK HANDLING FACILITIES: There are no tanks, but there are warehouses for storing grain and general cargo. These warehouses belong to the National Port Administration and to the Free Zone, and are located within the port area.

FRESH WATER: Fresh water is supplied by the National Port Administration.

FUEL: There is a fuel storage depot within the port area, and should it be necessary to supply bunkers to a vessel, application has to be made to ANCAP who will supply via tanker trucks.

FIRE PRECAUTIONS: There are none, other than those of a routine nature.

CONSULS: There are none at local level. In the town of Carmelo, 21 km. from Nueva Palmira, there is the Consulate of the Argentinian Republic.

REPAIRS: Minor repairs possible.

SURVEYORS: None available.

GANGWAY/DECK WATCHMEN: The service of watchmen is not necessary, unless the vessel is carrying flammable cargo.

HATCHES: Opening and closing of hatches is normally carried out by stevedores.

CUSTOMS ALLOWANCE: Each crew member is permitted to carry out of the bonded ship's store, 5 kg. tobacco, 2 cartons of cigarettes and 2 bottles of wine.

CARGO GEAR: Normally, loading and discharge are effected by means of land-based equipment.

REPATRIATION: There are facilities for changing crews, and to effect any repatriation necessary. In both cases, the arrangements are carried out with the participation of the Immigration Authorities and the Maritime Agency concerned.

AIRPORT: There is the airport of Zagarzazu located between Nueva Palmira and Carmelo, approximately 15 km. from this town.

TIME: Local time is GMT minus 2 hours.

HOLIDAYS: 1st January, 19th April, 1st May, 19th June, 18th July, 25th August, 12th October, 8th December, 25th December. Holidays do not interrupt operations on vessels.

POLICE/AMBULANCE/FIRE: Police: Tel. 42, Ambulance: Tel. 82. No fire brigade.

TELEPHONES: It is not possible to have telephones installed on board.

SERVICES: There are stevedoring services, Maritime Agents and Customs Clearance Agents.

SHORE LEAVE: Once Free Pratique is granted, there are no prohibitions for crew members going ashore.

DEVELOPMENTS: The lengthening of the head of the Official Quay by 200 m. to the North is planned. Grain Silo with capacity of 25,000 tons to be built.

AUTHORITY: El Sub-Prefectura de Nueva Palmira.

PAYSANDU: 32.18 S. 58.06 W. (See Plan)

LOCATION: Situated on the East bank of Uruguay River, 380 km. above Montevideo. Km. 204 on River Uruguay.

DOCUMENTS/PILOTAGE/HEALTH/RADIO: See "General" at beginning of Uruguay section.

RESTRICTIONS: River navigation controlled by depth in the passes at Almiron, Vera and Urquiza. Since river conditions vary from season to season, Agents should be consulted beforehand regarding available draft at any particular time.

ANCHORAGE: Off Montevideo.

MAX. SIZE: Up to 15 ft. draft fresh water, depending on river conditions.

TUGS: Available.

BERTHING: Grain Elevator Berth; 20 ft. depth alongside at zero tide. Coastal Berth: Length 300 m. Depth 11 ft. at zero tide. ANCAP Pier: 1 berth for tankers, 30 ft. depth at zero tide.

There is 1×5 ton crane on the grain quay and 3×3 ton cranes on the coastal berth. Loading on the ANCAP berth is by lorry.

STEVEDORES: Working hours: 0800 – 1200 and 1430 – 1800 hrs. Saturdays: 0800 – 1230 hrs.

MEDICAL: All assistance available.

FRESH WATER: Available at all berths.

FUEL: By negotiating through the intermediary of the Customs Clearance Agent the required quantity is delivered.

REPAIRS: Minor repairs can be effected.

CONSULS: Local representation for Argentina, Brazil, Italy and Paraguay. All other Consuls at Montevideo.

GENERAL: Refer to "Montevideo" for all general information.

NOTES

Please also advise Shipping Guides Ltd.

Republic of Vanuatu

PORT VILA: 17.45 S. 168.18 E.

PORT LIMITS: A line drawn between Pango Point and Devil's Point.

DOCUMENTS:

Last Port Clearance.
2 Crew Lists.
2 Passenger Lists.
2 Cargo Manifests.
2 Stores Lists.

Log Book, Derat and usual Ship's Certificates to be available for inspection.

PILOTAGE: Compulsory for all vessels over 60 m. in length. Pilot boards 2 miles West of the fairway buoys, on the leading lights. Pilot launch displays the Pilot (H) flag by day; by night, a red flashing light. 24 hours' notice of ETA to be given.

Telegrams/Telex for Pilot should be addressed to Harbour Master, Vila, or advise through Agents. ETA messages for night arrivals, weekends and public holidays must arrive during office hours, Monday to Friday. VHF watch is kept on Channel 16 during working hours. Contact normally made 2 hours before arrival at pilot station.

ANCHORAGES: When a vessel has to await a berth or tide, the Master may anchor in the main bay North of the leading lights (1,200 m. from lower lead) and well clear of vessels leaving Pontoon Bay; or as directed by the Harbour Master.

RESTRICTIONS: No restrictions except that no services will be provided after 2300 hrs. and before 0500 hrs., unless in emergency or by prior arrangements.

MAX. SIZE: Governed by berth size and max. LOA 250 m.

HEALTH: Pratique messages should be addressed to Harbour Master. If vessel not healthy, medical advice should be requested through Agents.

Pratique messages will not normally be responded to if the vessel is healthy.

RADIO: Messages or communications possible via Port Vila Coastal Radio. Callsign YJM.

VHF: Port and radio station keep watch on Channel 16 during working hours.

RADAR: No radar services.

TUGS: One tug available for berthing/unberthing. 780 h.p., 14 tons bollard pull.

BERTHING:

Main Government Wharf: Steel pile and concrete decking construction; with bollards 30 m. from each end of the wharf. Length of wharf 212 m, width 9 m. and depth 10.7 m. alongside. Loading/discharging by ship's gear.

Transit storage 2,000 sq.m.; open storage 1,000 sq.m. Can take Ro/Ro traffic.

Arammadi Wharf: Privately owned. Length 55 m., depth 8.2 m. alongside. Vessels of 150 m. length can berth safely. Ample open storage, but no closed storage.

Town Wharves: 2 small wharves on town waterfront, depth 2.5 m. alongside. Also see "Tankers".

CRANES: None available.

STEVEDORES: *Working Hours:* Monday to Friday: 0700 – 1100, 1300 – 1700, 1800 – 2300. Saturday: 0700 – 1500. Sundays and Public Holidays: No cargo work. Gangs to be ordered previous day by Agent.

MEDICAL: Government hospital with full facilities. Private doctors and dentists available. Arrangements may be made in advance with Agent by telex or on arrival.

TANKERS: Berth is situated in Paray Bay. It is a timber pontoon with a small T-head catwalk. Due to bar at entrance to bay, entry is made at HW only with controlling draft of 7 ft. plus height of tide. Max. size 1,500 d.w.t.

There is an overhead power cable between Iririki Island and the mainland with a vertical clearance of 18 m.

DENSITY: 1025.

FRESH WATER: Available at main wharf at a filling rate of about 38 t.p.h. At the Star Wharf fresh water available at a filling rate of about 2 t.p.h. Water is good quality and potable.

FUEL: Fuel can be supplied by Shell, Mobil and B.P. by road tanker.

CONSULS: Australia, France and U.K. are represented.

REPAIRS: Small repairs can be undertaken.

DRY DOCKS: None.

SURVEYORS: Classification Societies' Surveyors can be brought from Fiji and New Caledonia at short notice.

GANGWAY/DECK WATCHMEN: Not available or necessary.

OPENING/CLOSING HATCHES: Hatches are normally opened and closed by ship's crew.

CUSTOMS ALLOWANCES: 200 cigarettes or 100 cigarillos or 50 cigars or 250 grammes tobacco. 2 litres of wine and 1.5 litres of spirits.

CARGO GEAR: Ship's gear used for loading/discharging. 11 forklifts from 2 – 20 tons, 1×22 ton flat-bed truck, 1 flat-bed truck with 19 ton crane, 1×8 ton tipper truck, 1 prime mover, 1×20 ton semi-trailer, 1×10 ton tilt trailer, 3×3 ton trucks and 1×20 ton container top lift frame (20 ft. containers) available.

REPATRIATION: Arranged by Agent.

AIRPORT: Bauerfield International Airport in Vila about 5 km. from port. Daily services to Noumea. Regular services to Fiji, Auckland, Sydney, Brisbane, Honiara and Naura.

TIME: GMT plus 11 hours. GMT plus 12 hours from late September to late March.

POLICE/AMBULANCE/FIRE: Police tel: 2222; Ambulance tel: 2100; Fire tel: 2333.

TELEPHONES: Available on board at Main Government Wharf through Agent.

SERVICES: Diver available. Tinned, frozen meat and vegetables available, also bonded stores.

BANKS: Available.

SHORE LEAVE: No restrictions.

IDENTIFICATION CARDS: Not required.

REGULATIONS: No special regulations.

DELAYS: Only when more than one ship in port.

DEVELOPMENTS: The privately owned 50 m. wharf to be extended by 40 m. and strengthened for container handling. No date yet fixed for commencement of construction.

SHIP SUPPLY SERVICE: Tug "Roimata" and pilot boat "Tekoni" can be used in an emergency for transport of personnel/essential stores. There are various charter boat operators who can be mobilised through the Department for Emergency Operations.

GENERAL: *Charts:* BA 1493 and 1494 cover this port.

AUTHORITY: Ports and Marine Department, P.O.Box 198, Port Vila, Vanuatu. *Tel:* 2339 (Office), 3465 (Home). *Telex:* Vangov 1040 N.H. *Contact:* Captain Norris Hamish, Harbour Master.

SANTO: 15.31 S. 167.11 E.

The Port of Santo is sometimes referred to by the name of the old town 'Luganville', but nowadays the port and the town are usually called 'Santo'.

PORT LIMITS: The Port of Santo includes that area of the Segond Channel bounded in the East by a line running due North from Black Rock Point on Aore Island (from the 'Black Rock' on Chart BA 1736). This is known as Pointe Chapuis on French charts. It is bounded in the West by a line running due East from the Renee River on the island of Espiritu Santo.

DOCUMENTS:

Last Port Clearance.
2 Cargo Manifests.
1 Crew Declaration.
2 Animals List (Nil if none aboard).
2 Prohibited and Restricted Goods (Arms and Ammunition).
2 Lists of Ship's Stores (Cigarettes, Tobacco, Alcohol, etc.).
6 Crew Lists.

All the above can be provided on ship's paper.

The following is a Vanuatu form which can be filled in on arrival: Ship's Report and Arrival Declaration (Vessel's Details).

PILOTAGE: Telegrams for the Pilot should be addressed 'Harbour Master Santo' or advice passed through Agents. ETA messages for night-time and week-ends must arrive during office hours Monday to Friday.

Ships calling at Port Vila first may pass ETA Santo through the Harbour Master at Vila.

VHF watch is kept during office hours on Channel 16 and for 2 hours prior to all advised arrivals. Pilot boat also watches Channel 16.

The pilot boat is a 12 m. boat with white hull and superstructure. She has 'Pilot' in black letters on the cabin and exhibits a pilot jack. She carries a red flashing light with her pilot lights at night.

The pilot station is 1 mile East of Black Rock Point at the Eastern entrance to the Segond Channel. By day and in good visibility the Pilot may board or disembark at the South-Western end of the Segond Channel South of Georges Philippar Pass, though this is not normal and should be by prior arrangement.

Pilot ladder should be rigged in accordance with the S.O.L.A.S. convention.

ANCHORAGES: Vessels may anchor anywhere in the Segond Channel except in the 'Prohibited Anchorage' close off the Main Wharf (which is shown as 'Dock No. 3' on Chart BA 1736). There is a patch with a least depth of 14 fathoms 1 mile S.S.W. of the main wharf which is recommended for anchoring, especially for smaller vessels seeking shelter from the S.E. trades. A strong tidal current, normally up to 3 knots, runs in the channel and vessels should give plenty of scope.

RESTRICTIONS: There are no restrictions on entry. However, as stevedores do not work from 2300 hrs. to 0700 hrs., vessels due to arrive between these times are *recommended* to slow down, save fuel and arrive at the pilot station at 0530 hrs. or 0600 hrs. to berth in daylight.

MAX. SIZE: Governed by berth size only.

HEALTH: Pratique messages should be addressed to Harbour Master with ETA message. If vessel is *not* healthy Harbour Master will advise action to take. Pratique messages will not normally be responded to if vessel is healthy. Vessels arriving from Port Vila do not require Pratique.

RADIO: Message should be sent via Port Vila radio, call sign YJM.

VHF: A port watch is kept on Channel 16 during office hours Monday to Friday and from 2 hours prior to advised ETAs. Call 'Harbour Master Santo'. The pilot vessel also watches Channel 16 VHF when on pilotage duty.

RADAR: No radar service.

TUGS: None, but one may be obtained in emergency from Port Vila.

BERTHING: Salt water Berth 140 m. long with a depth of 10.5 m. at LWS, and this is the maximum draft. Vessels can, and usually do, overhang the ends of the wharf with lines on dolphins or bollards on the shore. Dolphins are situated 22.5 m. East and 35 m. West of the Wharf.

Also see "General".

CRANES: None.

BULK CARGO FACILITIES: Stevedores are currently interested in experimenting with bulk loading of copra (rather than from bags) and various methods are used to suit different ships. All methods, however, require lifting by ship's gear. There is interest in the construction of a small coconut oil mill, storage tanks for which are already constructed.

BRIDGES: None.

STEVEDORES: Stevedores work 0700 hrs. to 1100 hrs., 1300 hrs. to 1700 hrs. and 1800 hrs. to 2200 hrs. Advice given at least the previous day by Agents should be sufficient. Stevedores do not work on Sundays, or if avoidable on public holidays.

MEDICAL: Medical attention can be arranged after arrival and there is a hospital in Santo. However, medical treatment that is not of an emergency nature should be sought elsewhere.

TANKERS: Tankers berth at the main cargo wharf. The discharge line is 8 in. and the rate of discharge is 150 tonnes per hour.

DENSITY: 1025.

FRESH WATER: Vessels can take up to 500 tonnes if 2 working days' notice are given. Otherwise the maximum amount may be as little as 50 tonnes. Water is good though a little hard.

FUEL: Small quantities can be arranged by truck. Large quantities can be delivered by the 8 in. tanker discharge line, but must be by prior arrangement with Shell or Mobil. Santo is not normally a bunkering port.

FIRE PRECAUTIONS: All normal precautions only.

CONSULS: None.

REPAIRS: No shore facilities suitable for larger vessels.

DRY DOCKS: None. Slipway for vessels up to 50 m. length.

SURVEYORS: None.

GANGWAY/DECK WATCHMEN: Not considered necessary.

HATCHES: Hatches are opened and closed by either crew or stevedores. Recommended that crew carry out this operation on copra loading ships.

CUSTOMS ALLOWANCES: (Per crew member) 200 cigarettes or 100 cigarillos or 50 cigars or 250 grammes tobacco. 2 litres of wine and 1.5 litres spirits.

CARGO GEAR: Ship's gear only. Ashore: 5 forklifts (from 2.5 to 22 tonnes), 2×3 tonnes flat trucks, 1×6 tonnes dump truck, 8 tractors, 100×2 tonnes trailers and 1×22 tonnes container carrier are available. No lighters available.

STORAGE: General cargo sheds of 6,000 cu.m.; 9,000 cu.m. of copra storage. Container yard for 200 TEUs. There is a minimum of 1,600 cu.m. of open storage.

REPATRIATION: Possible from Santo Airport via Port Vila.

AIRPORT: Santo International Airport is about 6 km. from town.

TIME: GMT plus 11 hours. GMT plus 12 hours from 24th September to 24th March.

HOLIDAYS: Holidays vary from year to year. It is recommended to seek advice of local Agents. It is not normally possible to work cargo on public holidays or Sundays.

POLICE/AMBULANCE/FIRE: Police tel: 222; Fire tel: 316; Health Officer tel: 419.

Police station is close to the wharf. There is no ambulance service. The fire service consists of 1 fire tender operated by Public Works Department. The Harbour Master has some hoses and a small foam generating machine stationed on the wharf.

TELEPHONES: There is a public telephone in the Post Office near the wharf.

SERVICES: None.

SHORE LEAVE: No restrictions.

REGULATIONS: No special regulations.

IDENTIFICATION CARDS: Not required.

DELAYS: Only for stevedores non-working times or when there is more than 1 ship present in the port.

GENERAL: Tidal stream in the Segond Channel can reach as much as 4 knots, the Westerly flood stream being predominant and the East going ebb stream occasionally absent. The flood stream can set in a North-Westerly direction at the main wharf, thus setting a vessel down onto the wharf and making an apparently simple berthing manoeuvre a little difficult. It is recommended that when S.E. trades are blowing, and a vessel has to berth port side to in order to stem the tide, the starboard anchor should be laid off whilst berthing with about 5 or 6 shackles leading 2 points for'd of the beam. This is to heave the bow away from the wharf on departure.

DEVELOPMENTS: A main wharf replacement is sought and overseas aid funds are being sought. No dates are fixed.

AUTHORITY: Department of Ports and Marine, Box 148, Santo, Vanuatu. *Tel:* 739 (office); 454 (home). *Contact:* Captain M. Toa, Harbour Master.

NOTES

Please also advise Shipping Guides Ltd.

Venezuela

GENERAL:

BERTHING PRIORITY: The Venezuelan Ministry of Communications has decreed, through the Directorate General for Transport and the Port Captaincies, the following new docking priority system:

1. Vessels owned by the C.A. Venezolana de Navegacion or chartered by that company.
2. Venezuelan vessels belonging to private companies.
3. Vessels of other countries.

Previously, vessels chartered by the C.A. Venezolana de Navegacion did not get priority treatment and it is understood that, with these new priorities, the number of vessels with docking privileges has been tripled, thus resulting in greater delays for vessels operated by foreign companies.

SHIPMASTER'S REPORT: July, 1982.

You may wish to caution all seafarers who may in the future trade to Caripito, and the other similar jungle areas. The problem in this area used to be mosquitoes, but although they are still around, the problem that we have recently experienced is a moth locally known as 'Palometas'. One doctor referred to it as an insect 'Hylesia Canitia'.

My information is limited, due to language difficulties, but the problem is very real, and I cannot caution the unaware strongly enough to take precautions. The vessel has traded to Caripito frequently over the past two years, and this would appear to be the first experience as I can find nothing about these moths in writing and our first warning was given when an Agent saw some of these moths onboard. This type of moth appears suddenly from the jungle with no regular cycle, and like other moths is attracted at night by lights, be they from vessels, homes or berth installations. They are about *one inch* in length, their bodies about pencil thickness and filled with eggs. They flutter in vast numbers around the lights, and it would appear that the dust, pollen, hair or whatever comes off them, falls onto the ship's structure or persons nearby. They do not bite and therefore I assume the dust, breathed in or landing on the skin causes a red pimply rash which gradually spreads over the whole body. It affects everyone differently, some crew were covered in a very heavy bumpy red rash within a few hours of exposure, others only in small patches on the arms which spread over the body taking several days, but in all cases causing extreme discomfort due to the itching and constant desire to scratch. At first it was only crew who were on deck that were affected, but as I assume the dust was brought into the accommodation by clothing, fans and the moths which got past the doors, the engine and catering crew were similarly affected.

Over two thirds of the crew were treated locally within 24 hours, with injections, tablets, lotions & creams but this only brought temporary relief. Rashes picked up 10 days ago with the first incident are now clearing up, but fresh rash areas appeared when we visited the Caripito area 3 days ago. We are on a weekly schedule, and one would hope we will build up a resistance to this problem. The local people also suffer from this rash, but the ones I met only had a very light rash on arms, neck and body. They cannot say how long the moths will be present, varied reports of two weeks to months. However, we are now adopting the following anti-moth measures:

1. Put the air conditioning on recirculation, ensure all openings are closed.
2. At night when underway, blackout the vessel as much as possible. During the San Juan River passage to Caripito, navigation lights only situation if possible.
3. When you anchor in San Juan River to wait for the tide or berth at Caripito, blackout the vessel and allow no one outside if possible at night, anchoring or picking up by torchlight. Having anchor lights on at night is debatable, the local dredger does not.
4. Wash the vessel down completely at daybreak, and sweep all dead moths off the deck.
5. For night mooring/deck operations, have as few lights on as safely possible, all exposed crew should cover themselves completely, particularly around the neck area.
6. After clearing the Maturin Bar (river entrance) wash down the whole ship. The dust off the moths is still active days after leaving the area. Wash all filters of air conditioning units.

Knowing about this problem could have reduced exposure to what is an extremely unpleasant experience, and I have urged the local installation to include a warning in their Port Information Guide.

DOCUMENTS: *Prior to Arrival:*

Arrival Notice: The Agent must submit 24 hours in advance of the vessel's arrival, a letter-notification indicating date and time of arrival, name and nationality, name of Master, length, gross and net registered tonnage of cargo for the port, origin, destination, shipper and agency, in 16 copies, with the following distribution:

Captain of the Port, Customs (2), The National Institute of Ports-INP (3), Armed Forces of Cooperation, National Guard, Police Intelligence Service Bureau-DISIP, National Bureau of Identification and Alien-Immigration, Interpol, Ministry of Health and Social Welfare-Public Health Unit, Ministry of Agriculture and Livestock-Animal and Plant Health, Post Office and Chamber of Commerce.

Information on Cargo and Passengers for the Port: The agency must receive by airmail, sufficiently in advance, the following documents to be submitted to the authorities at least 24 hours before the vessel's arrival:

Documents	*Captain of Port*	*Customs*	*INP*	*Agency*	*Total*
Cargo Manifests(a)	–	1	3	3	7
Correction Letter to Manifest	–	1	–	1	2
Bills of Lading	–	–	2	1	3
Stowage Plan(b)	–	–	1	2	3
Cargo List	–	–	10	–	10
Container List	–	–	12	–	12
Dangerous Cargo List	2	–	1	1	4
Passenger List	–	–	–	1	1
Mail List	–	–	1	–	1

(a) As of January 29, 1979, the Cargo Manifest may be submitted on LAFTA/OAS Form 2, instead of on the Venezuelan Freight List (Sobordo).

(b) The Venezuelan Shipping Association is negotiating to have the stowage plan submitted to the National Institute of Ports on the vessel's arrival, instead of 24 hours in advance.

Request for Port Services: 24 hours before the vessel's arrival, the agency must submit to the Captain of the Port the request for pilotage, towage and berthing.

At the same time, it must request permission to disembark and embark passengers and cargo and unload merchandise, on a form addressed to the Customs Administrator, with copies to the INP and the National Guard.

Additional Requests: The agency must draw up and submit to the National Institute of Ports, 24 hours before the vessel's arrival, 12 copies of the cargo index, a document corresponding to tally books.

On Arrival:

Type of Document	*Number and distribution of documents*						
Basic forms	*Captain of Port*	*Customs*	*INP*	*National Guard*	*Public Health*	*Others*	*Total*
General Declaration	1	1	1	1	1	2(a)	7
Cargo Manifest	1	3	–	–	–	–	4
Crew List	2	2	–	2	–	5(b)	11
Passenger List	1	2	3	2	–	5(b)	13
Ship's Store List(c)	–	–	–	–	–	–	–
Crew Effects Declaration(c)	–	–	–	–	–	–	–
Maritime Health Declaration	–	–	–	–	1	–	1
Mail List	–	–	–	–	–	1(d)	1

(a) DISIP and Identification.

(b) DISIP, Bureau of Military Intelligence, Interpol, Identification and Tourism.

(c) Eliminated by the new Organic Law of Customs, March 5, 1979.

(d) Postal Service.

Additional Documents							
Clearance from last port	1	–	–	–	–	–	1
List of in-transit passengers	1	2	3	2	–	5(e)	13
Freighted Bills of Lading	1	1	–	–	–	–	2
Return Cargo Manifest(f)	–	3	–	–	–	–	3
Cargo Indices	–	2	–	–	–	–	2
Baggage Declarations(g)	–	–	–	–	–	–	–
Vaccination List	–	–	–	–	1	–	1
Narcotics List	–	2	2	1	–	–	5
Firearms List	–	2	2	1	–	–	5

(e) DISIP, Bureau of Military Intelligence, Interpol, Identification and Tourism.

(f) When a vessel returns to the country goods missing in unloading other vessels, it shall submit, in addition to the cargo manifest a return cargo manifest containing the data required for the manifest and the name of the vessels on which the goods were originally manifested (Organic Law of Customs).

(g) Eliminated by the Organic Law of Customs.

Prior to Departure:

Clearance Documents: At least 6 hours in advance, the request for the clearance permit must be submitted to the Captain of the Port.

Request for Pilotage: Also 6 hours in advance, or more, the request for pilotage must be submitted to the Captain of the Port.

AMUAY BAY: 11.46 N. 70.15 W. (See Plan)

OPERATORS: Lagoven, S.A.

ESSENTIAL REQUIREMENTS:

1. Incoming vessels must send ETA at least 3 days before arrival at Amuay Bay. During hours of darkness all vessels must identify themselves on arrival either by radio-telephone or aldis, preferably the former.
2. If a ship originally cleared for another port (including some other Venezuelan port) is diverted at sea to Amuay Bay, certain information must be radioed prior to arrival to avoid heavy fine and/or delays. See "Radio".
3. No dirty ballast may be pumped overside in port or in Venezuelan coastal waters. Ballast disposal facilities are available at Amuay Terminal.
4. The use of Venezuelan Government Pilots is compulsory for docking and for movements inside the bay.
5. The Venezuelan flag should be displayed at the mast-head during daylight hours by ships anchored and berthed in Venezuelan waters.
6. In addition to other clearance documents, 2 copies of an itemised list of articles in the ship's chest must be presented to Authorities on arrival.
7. Emergency fire signal is 5 long blasts on ship's whistle or siren. No other signal is to be given in the case of emergency.
8. Ratguards must be in place on all mooring lines.

LOCATION: The port of Amuay Bay is located on the Gulf of Venezuela, on the West Coast of the Paraguana Peninsula, Venezuela. The sea buoy marking the entrance to the bay is located in Lat. 11° 44′ 25″ N., Long. 70° 14′ 50″ W.

DOCUMENTS: Inward clearance is effected on board immediately after docking by Government Port Officials and a representative of the Marine Department. It is necessary that the following documents be ready on arrival:

Clearance from last port.
Ballast Certificate from last port.
Crew Lists (5 copies).
Passenger Lists (5 copies).
Baggage List (3 copies).
Lists of Personnel Effects (3 copies).
Store Lists (3 copies).
Lists of Slop Chest (3 copies).
Sailing permit (Zarpe).

Vessels arriving with cargo to discharge, will also require:

Manifest (Sobordo) (1 original and 2 copies from each loading port).
Bills of Lading, 1 original and 5 copies from each loading port.
Tally Books (6 from each loading port).
Commercial Invoices (3 from each loading port).

Although vessels proceed directly to Amuay Bay, clearance documents should be prepared showing the port as Las Piedras, Paraguana (Amuay Bay). Failure to observe this requirement may result in penalties up to a maximum of Bs.2,000.

Admeasurement Certificate: All ships calling at a Venezuelan port for the first time must be measured for tonnage by the Captain of the Port. It is the usual practice to take ashore the ship's Panama Canal or Suez Canal Certificate, or any other certificate with which Venezuela is in agreement, which is used as a basis for recalculating tonnage under the Venezuelan Regulations, and is returned before sailing. The Venezuelan Admeasurement Certificate, when later issued, is forwarded to the owners. A fee is charged for this certificate, which is payable only on the ship's first call. Vessels registered in the following countries are excluded from the above regulations: Denmark, France, Germany F.R., Ireland, Netherlands, Norway, Portugal, Sweden, United Kingdom and U.S.A.

Vessels that were originally cleared for another foreign port, or another Venezuelan port, and were subsequently diverted at sea, should radio the following information to "Lagomar-Judibana" prior to arrival:

Vessel's name
Master's name
Vessel's flag
Number of crew
Estimated time of arrival.
Last port of call
Port for which originally cleared
Grade and quantity of cargo to be lifted.

This information is required in order to make in advance special arrangements for inward clearance, to avoid payment of fine.

Outward clearance and cargo documents are delivered on board by the Marine Dispatcher. However, in order to obtain the sailing permit, a special form, delivered on board on arrival, must be completed, not later than 2 hours before sailing time. This form gives cargo and freeboard information by the Captain of the Port.

In the event the berth is required by another vessel, a vessel having completed loading may be required to vacate the berth promptly and proceed to anchorage to await cargo documents.

PILOTAGE: Pilots are employees of the Venezuelan Government and pilotage is compulsory for vessels entering or leaving the harbour. The Marine Department will arrange for Pilots to board all vessels as necessary.

The Pilot acts in an advisory capacity; the Master retains responsibility for the ship at all times. In the event it becomes necessary to disregard the Pilot's instructions in order to ensure the safety of the ship, the Master must forward through the Marine Department a full written report of the circumstances, for delivery to the Captain of the Port.

ANCHORAGES: For vessels awaiting berth, there is a good anchorage about 1 mile N.W. of the sea buoy in 8 to 12 fathoms with a sand and mud bottom. Ship Masters are requested not to anchor at a distance greater than 3 miles from the sea buoy.

RESTRICTED AREA: A restricted fishing area has been established by the Venezuelan Government which is prohibited for mechanically propelled vessels drawing more than 5 ft. This zone lies within the area off the Paraguana Peninsula from Punta Macolla, Lat. 12° 5′ 32″ N., Long. 70° 12′ 55″ W., to Punta Estanques (Los Taques), Lat. 11° 48′ 45″ N., Long. 70° 16′ 45″ W., and a line connecting the positions below indicated: Lat. 12° 07′ 40″ N., Long. 70° 14′ 25″ W.; Lat. 12° 03′ 15″ N. Long. 70° 19′ 23″ W.; Lat. 11° 49′ 25″ N., Long. 70° 21′ 50″ W.

HEALTH: *Sanitary Inspections:* A close control of veneral diseases has been put into effect by the Government Sanitary Office.

Immediately after docking a Sanitary Inspector will board the vessel and all Crew members will be checked before going ashore.

Those persons found with infection must be sent to the Government Anti-venereal Clinic for proper medical attention and return to vessel before sailing. 20 Bolivares per ship.

Shore passes will be granted to all healthy persons.

Masters are required to co-operate in this campaign.

MAX. SIZE: Length 1,000 ft.; draft 43 ft. Also see "Berthing".

RADIO: The cable and telegraphic address for the Lagoven S.A. at Amuay is "Lagomar Judibana". Radio messages to and from ships at sea are routed through "Shipward 2 New York" for retransmittal through Aircon system to Judibana (Amuay Bay).

Radio notice of arrival should be sent 72 hours prior to arrival at Amuay.

Ship-to-shore telephone: Radio-telephone listening watches are maintained on a 24-hour basis in the Marine Office on the following frequencies: 2182 kHz.; 156.8 MHz.

International telephone: International telephone calls are routed through Caracas, Venezuela. Telephone number is Punto Fijo area 069-51557. (It is usually difficult if not impossible to complete a call.) Telex: 54193 Lagoven.

Also see "Documents".

TUGS: Tug assistance is considered essential and is afforded all vessels entering, leaving or shifting in the harbour by 2 × 1,600 h.p. tugs. Disposition and manoeuvres of tug-boat are directed by the Pilot, who uses a "walkie-talkie" to convey orders to the tugs.

BERTHING: 4 finger piers provide 8 berths, numbered 1 to 8, from South to North.

	1	2	3	4	5	6	7	8
Max. Arrival d.w.t. (m.t.)	70	92	24	44	16	30	16	30
Max. departure d.w.t. (m.t.)	112	112	48	48	38	38	94	94
Max. Draft (S.W.)	43′	43′	*37.6′	*37.6′	*37.6′	*37.6′	*37.6′	43′
Max. Length Ship	1000′	1000′	650′	700′	700′	700′	856′	856′
Max. Beam	Unl.	Unl.	Unl.	†	†	†	†	Unl.
Bow to manifold distance	495′	495′	300′	320′	330′	330′	340′	340′

Ballast line, fresh water and all grades bunkers at all berths.

*The max. draft will be increased to 40 ft.

†Max. beam permissible varies dependent upon the beam of vessel berthed on other side of the slip.

The use of an anchor when docking is permitted at all berths. It is considered prudent to have the outboard anchor hove-out prior to entering the harbour in order to facilitate speedy release if necessary while docking. The Pilot will advise whether the ship is to be berthed port or starboard side to the dock.

Products handled:

Berth No. 1 & 2: F.O., heating, heavy distillates, TJ-102, topped crudes, all crudes.

Berth No. 3 & 4: Lubes, F.O., LCT asphalts (penetration).

Berth No. 5 & 6: Naphtha, jet fuel, crudes, F.O., heating, MC/RC asphalts, kerosene, TJ-102, topped crudes, LCT (pref.).

Berth No. 7 & 8: Naphtha, kerosene, heating, F.O., jet fuel, MC/RC asphalts, all crudes except TJ-102.

LOADING: Loading rates particulary for low-flash products loaded during the hours of darkness or when topping-off cargo tanks, will be reduced by the terminal to meet existing conditions.

All loading and discharging will be stopped during the passage of an electric storm, and ullage covers must be closed and dogged down. During periods of calm, loading of gasoline or other similar low-flash products may be loaded at reduced rates or loading stopped if the heavy vapours are not being dispersed quickly enough to prevent hazards from accumulated gas pockets. Ship's officers are cautioned to be on their guard during such conditions.

Loading rates will be reduced when topping-off, if requested by the ship's officer.

Some of the fuel cargoes are loaded from fuel reservoirs through certified positive displacement meters, and shipping documents are prepared on the metered figures. All reconstituted crudes are line blended with conditions recording of component rates and quantities. Actual loading rates of both this crude and metered fuel cargoes are available at any time upon request of the standby.

Instructions as to grade or grades of cargo, and the approximate loading rate anticipated, will be given to the Master on completion of inward clearance. Supplementary information including number and size of lines and hoses will be furnished to the Chief Officer before loading commences.

If vessel's loading orders from owners or charterers do not agree with the terminal's orders, either as to grades or quantity, the marine representative should be advised immediately. The terminal is authorised to load 10% more or less than the quantity nominated; if the cargo to be lifted will be more or less than this 10% limitation it is necessary to cable New York for confirmation.

A terminal employee is stationed at each pier during the entire time the ship is discharging ballast, bunkering, or loading cargo. Fifteen minutes "stand-by" notice should be given to this man prior to completion of ballast, bunkers, or cargo.

Vessels loading liquid and flaked sulphur: *For vessels loading liquid sulphur, the following applies:*

Location: Pier 2, berth 3 at Amuay Bay.

Draft – 40 ft., length overall – 700 ft., beam – no limitation.

Loading will be at the rate of 400 long tons per hour through a 6 in. line and rubber hose.

Maximum cargo size – 25,000 long tons.

Normal loading temperature is 275° F. (Minimum – 265° F. Maximum – 295° F.). Density at normal loading temperature is 112 pounds per cu. ft. Viscosity at same temperature is 8.5 centipoises.

Safety precautions/provisions: Molten sulphur classified as "Grade E Liquid" by U.S. Coast Guard. No naked light, open flames or sparks should be permitted near any tank openings. Molten sulphur is combustible but is handled at temperatures below its flash point (325-370° F) and ignition temperatures (476-502° F).

For vessels loading flaked sulphur, the following applies: Physical characteristics of the loading facilities:

(a) Location: Lat. 11° 44′ N., Long. 70° 14′ W. Anchorage approximately 2,000 ft. South Punta Adaro with a depth of 33 ft. 400 yards offshore and dropping off to 50 ft. 1,000 yards offshore. In the rare event that the wind is Westerly vessel would anchor further offshore.

(b) No draft, length or beam limitation. (Vessels loading up to 24 ft. draft may be anchored inside the bay).

(c) Loaded barges whose overall dimensions are 200 × 42 × 17 ft. will be brought alongside with the aid of tugs and removed when required, barges will be equipped with fenders. The hoppers are 160 × 37 × 14 ft. Loading from barges to ship will be done using ship's gear and clam shells of 1.25 ton capacity. Clam shells will be furnished by Lagoven free of charge. Personnel (stevedores) to carry out the loading operation will be supplied by Lagoven or the ship's crew can be used if this is set forth in the charter party. Loading rate 1,000 long tons per day.

(d) The anchorage is sheltered in the lee of the Adaro Peninsula. Wave heights vary between 1 ft. and 2 ft.

(e) Normal Maximum parcel size – 10,000 tons loaded at a rate of 1,000 tons per day, however, an additional 2,500 tons can be supplied at a loading rate of 500 tons per day.

(f) Flaked sulphur when stored in large quantities varies in density from 55 to 90 pounds per cu.ft. Average density is anticipated to be 70 lbs./cu.ft. Individual flakes are of irregular shape and are less than 0.5 sq.in. in area and less than 0.0625 in. thick. This size data is not a specification nor guarantee and is provided only to indicate the order of magnitude dimensions.

General:

Fee of Bs. 200 will be charged for trips between the Terminal and the anchorage by launch or tug for delivering personnel.

Method of cargo quantity determination: Barge drafts are marked to the nearest inch and capacity tables prepared by Charles Martin. The draft prior to commencement of and upon completion of discharging are noted. The amount transferred is obtained by consulting the tables. The quantity arrived at by totalling the amounts from the barges used is compared to the ships figures and reconciliation reasoned.

BALLAST: Vessels should arrive with sufficient ballast to permit safe handling. The Pilots require a draft of minimum 8 ft. forward, 18 ft. aft, on a T-2 or similar size tanker, 11 ft. forward and 20 ft. aft on a 26,000 d.w.t. or larger vessel. Ballast should be carried in a minimum number of tanks, and all other tanks stripped, so as to minimise deballasting time.

A relatively small amount of salt water remaining in ship's tanks or lines can contaminate crude and cause operating problems for the refiners. It is important therefore to strip tanks and lines as dry as possible.

Vessels provided with completely segregated ballast system are permitted to discharge ballast and load cargo simultaneously.

Absolutely oil-free ballast may be discharged overside. All dirty ballast must be pumped ashore. A 30 in. ballast line, 2×60,000 and 1×120,000 barrel slop tanks and separator system are available.

A considerable number of vessels are now participating in the programme to eliminate pollution of the seas. Under this programme, vessels may arrive carrying quantities of oil/water emulsion. If it is desired to follow the "load-on-top" procedure in such instances, it is requested that the Marine Representative be informed on arrival.

MEDICAL: Medical treatment and hospitalisation, if required, is provided at a hospital located in the Lagoven concession, operated by the Society of Catholic Medical Missionaries. Several dentists are located in the area.

Italian Crew members covered by Casa Maritime insurance receive medical attention from the appointed medical representative in Punto Fijo.

Authorisation forms for medical and dental treatment are provided, which require Master's signature. Transportation is available at the Marine Office. Please note that if the patient does not speak Spanish or English, an interpreter should accompany him.

FUEL: Ship's requirements specifying grade and quantity desired are to be given to the Marine Representative boarding the vessel on arrival. All grades of bunker fuel, intermediate fuels and Diesels are available except Esso diesel. Bunker delivery rates average 2,500/3,500 barrels per hour. Bunkers are loaded through meters which automatically register quantities on bunker receipts.

It is the responsibility of ship's engineer to give "standby" notice to the terminal employee and advise him when to shut down.

FRESH WATER: Fresh water can be supplied if necessary; however, supplies are limited to essential requirements. All fresh water is piped from distant sources. Loading rate is about 10 t.p.h.

CUSTOMS: Venezuelan laws are strict in regard to contraband and Masters are requested to instruct their crews not to take cigarettes or other articles ashore. Cigarettes in carton lots, cigars, tobacco, souvenirs, gifts (particularly items of women's apparel) should be collected prior to arrival in port, listed with the items in the slop chest and placed in the custody of the Master for deposit in the slop chest or closet which will then be sealed for the duration of the vessel's stay in port.

Firearms on board any merchant vessel calling at Venezuelan ports must not exceed one per officer, nor can the ammunition exceed 18 cartridges per officer. All firearms and ammunition must be noted on the stores list. Officers must not carry firearms while the ship is in Venezuelan waters and these sidearms and ammunition should be collected and held in the Master's safe custody. Crew members should be warned against taking knives or other weapons ashore.

While the vessel is in port, Venezuelan National Guard Officials are assigned on board to ensure compliance with Customs regulations. The law requires that meals be supplied to these officials during regular meal hours. Masters are requested to give them the privilege of eating in the officers' mess-room, to avoid difficulties.

DENSITY: The usual specific gravity of sea water at the berth is 1025, temperature ranges from 78°F. to 85°F.

CONSULS: Brazil, Great Britain, Italy, the Netherlands, and Norway have consular representatives in the area.

TIME: GMT minus 4 hours.

SHORE LEAVE: Also see "Health". Shore passes will be granted to all healthy persons. A representative of the Captain of the Port boards on arrival and issues the required number of passes. Shore passes are to be collected prior to sailing and given to the Pilot undocking the vessel. Vessels are not permitted to sail until all Crew members are on board, unless hospitalised or prior arrangements made for disembarking. A letter to this effect is required from the Master.

REGULATIONS: (i) *Pollution:* The laws of Venezuela are very strict in regard to the pollution of harbour and coastal waters by oil, and heavy fines are imposed for violations. No dirty ballast, oil or bilge slops are to be pumped or allowed to escape overboard. All overboard discharge valves from cargo tanks and bilges are to be secured before loading or discharging commences. Loading is to be conducted with the greatest care and vigilance in order that errors or delays in handling cargo valves may not result in overflows. All deck scuppers should be plugged before loading to avoid harbour contamination should an overflow occur. The Authorities require that a written report be submitted by the ship involved in the event of an oil spill.

(ii) *Gangways:* All vessels using the port of Amuay must provide a safe gangway. The use of rung ladders, pilot ladders, etc., is contrary to Port Regulations, and Port Authorities will not board except by means of a safe gangway or accommodation ladder.

(ii) *Passengers:* Passengers will not be permitted to disembark unless in possession of the required visa and documents. To facilitate clearance, if passengers are carried, the Master should include advice to this effect in his radio ETA.

(iv) *Visitors:* All visitors to ships are prohibited except those company employees, petroleum inspectors, etc., whose duties require their presence aboard.

(v) *Rats:* Rat guards required at all times.

GENERAL: *(a) Weather Conditions:* There is little rainfall at Amuay Bay; annual precipitation averages 12 in. The so-called rainy season usually coincides with the Caribbean hurricane season, from August to November, although Amuay lies South of the usual hurricane track. During these months calms are often experienced and winds from a Westerly direction may be expected. Normal winds are steady from the N.E., average force 4, Beaufort Scale, with a max. of force 8. Temperatures average about 85°F., with little variation from day to night or season to season.

(b) Tides: The normal range of the tide is about 12 in.; however, a 28 in. range has been observed during spring tides.

(c) Lubricating oil: Supplies of Essomarine lubricating oils are available. Requirements should be given in vessel's radio notice of arrival.

(d) Bonded Stores: Cigarettes or other stores in bond are not obtainable in Amuay Bay.

(e) Cash Advances: The local currency is the Venezuelan Bolivar and cash advances are made only in this currency. It is requested that any requirement for cash advances be included in the vessel's ETA radio, to permit delivery on board on arrival.

(f) Charts: No supplies of charts or sailing directions are available at Amuay Bay.

(g) Laundry: A 6 hour laundry service is available throughout each working day. Such service should be requested in the vessel's ETA message.

(h) Mail: Itemised lists are required for ship's mail, to be signed by the Master. Unless other instructions are given, ship's mail received after sailing, or for vessels on which no advice has been received, will be held for 30 days and then returned to Owners or Operators at ship's expense.

(i) Inspection – Petroleum Products: Chas. Martin & Co. and E. W. Saybolt, petroleum inspectors, are available if specified. Telephone numbers, Chas. Martin 44665, 44650 and 44211; Saybolt 44639, 44645 and 44227.

(j) Norwegian Government Seamen Service: A field representative of the above service is stationed at Amuay providing Norwegian and Swedish film exchange and other usual services. His telephone number is 51459.

(k) Personnel – Seamen Left Ashore: In the case of seamen left ashore for hospitalisation, repatriation or other reason, all documents and personal effects are to be delivered to the Marine Office before sailing. A letter is required from the Master advising the maximum advances to be made to the seamen, if any, and instructions concerning his repatriation. All expenses incurred by seamen left ashore, including cost of repatriation, are for ship's account.

It is important that Masters bear in mind that the Venezuelan law will at all times hold the vessel, her Master, Agent or owner, responsible for any seamen left behind in Venezuela.

(l) Provisions and Stores: Provisions and stores in limited quantities are available, the prices and quality of some items, such as fresh fruit, fish, shrimps, vegetables, etc. are competitive; dry stores are considerably higher than in most ports. The Port Steward will assist in filling requisitions.

(m) Radar and Radio: Radar and radio repairs can be effected in Amuay. A service repair man is available, but spare parts are limited.

(n) Repairs: Shore facilities are available only for emergency repairs of a minor nature. The nearest dry docks are those at Puerto Cabello and Curacao, N.A. Several contractors in the area provide labour for hull painting and for tank cleaning. Contracts for these services are made by the ship's Master directly with the contractor.

(o) Surveyors: There are no appointed surveyors to American Bureau of Shipping or Lloyd's in the area. However, with sufficient advance notice, arrangements can be made to have their nearest representatives come to Amuay to attend surveys.

(p) Walport Film Exchange: Subscribers to the Walport Service may exchange films at the Marine Office.

(q) Plimsoll Marks: The Captain of the port requires that the Plimsoll Marks of all vessels using the port be clearly visible. Vessels will be checked on completion of loading, and if the Plimsoll Marks are not readily legible, permission to sail may be withheld.

(r) Landmarks: Three conspicuous radio towers, 350 ft., painted alternate red and white bands, with red flashing aircraft warning lights, are located in the refinery area, 1 mile East of the docks.

ATTENDANCE: Representatives of the Marine Department board vessels immediately on arrival, and it is particularly requested that Masters indicate at that time all ship's requirements. The Marine Office Building is located at the Pierhead Trestle and personnel are available for assistance at all hours. Telephones are located on all docks and the Marine Shift Supervisor can be called on telephone No. 444475 or 444465.

CARIPITO: 10.09 N. 63.02 W.

Also see "General – Shipmaster's Report, July 1982".

OPERATORS: Lagoven, S.A.

LOCATION: Caripito is located on the West bank of the San Juan River in Lat. 10° 09′ 25″ N., Long. 63° 02′ 01″ W. Also see "General" before first port.

ESSENTIAL REQUIREMENTS:

1. Incoming vessels must send to Caripito their ETA Guiria at least 3 days in advance followed by confirmation 48 and 24 hours before arrival.

2. If a ship originally cleared for another port (including some other Venezuelan port) is diverted at sea to Caripito, certain information must be radioed to Caripito prior to arrival to avoid a heavy fine and/or delays. See "Radio".

3. No dirty ballast may be pumped overside in port or in Venezuelan coastal waters. Limited ballast facilities are available at Caripito Terminal.

4. Vessels calling at Caripito must obtain Government Pilots at Guiria.

5. The Venezuelan flag must be displayed during daylight hours while vessel is within port limits.

6. The emergency fire signal in Caripito dock area is 6 short blasts and 1 long blasts on ship's whistle or siren. No other signal is to be given in the case of emergency.

APPROACHES: The traffic in San Juan River is restricted to one-way from Marieta Point to Caripito. Therefore, instructions are issued at Guiria to incoming vessels relative to what action to take on arrival at Marieta Point. Outbound traffic is controlled so as not to conflict with these instructions.

1. Guiria: The town of Guiria is located on South coast of Paria Peninsula on N.W. shore of Gulf of Paria. When approaching from East a signal tower will be observed on a bluff slightly to North of town.

2. Maturin Bar: Buoy E-1, marks the entrance to Maturin Bar Channel. At Punta Gorda there is a light tower located in approximate Lat. 10° 09′ 50″ N., Long. 62° 37′ 52″ W. displays a flashing red light.

3. Channel: Maturin Bar Channel is 14 miles in length and 400 ft. in width. The tidal range over the bar varies from 4.6 ft. to 5.7 ft. with currents up 3 knots. The average salinity of water is 1.009; however, this may vary considerably between wet and dry seasons and spring and neap tides dredging of channel to 32 ft. (MLWS) has recently been concluded. Maximum draft permitted by Venezuelan regulations is 34 ft. in fresh water. There is a restriction of 6 in. less for all motor tankers. On leaving Maturin Bar Channel the San Juan River narrows from approximately 1.25 miles in width to about 0.7 miles with slight variations in width up to Marieta Point where it narrows to about 1,200 ft. and varies between 800 ft. and 2,000 ft. up to Caripito. Marieta Point marks intersection of Cano Frances and the San Juan River. It is also at this point that course of San Juan River changes approximately 100° to starboard and it is the beginning of one-way traffic. Frequently, incoming vessels are requested to anchor below this point to await outbound traffic. There are 32 lights marking strategic points in San Juan River between Maturin Bar and Caripito Terminal. These light towers are painted aluminium and are easily visible during daylight hours.

DOCUMENTS: (also see "Radio").

1. *Clearance (inward and outward).* Inward clearance is effected at Caripito. The sanitary inspector boards vessel at anchor or at berth depending on tidal conditions and/or the availability of a berth. The Customs and other Government officials usually board at the berth. However, should there be a delay awaiting berth or tide, the entry will be granted while vessel is at anchor, in which case accommodation ladder must be rigged.

It is necessary that the following documents be ready on arrival:
Ballast List (1 original).
Passenger List (5 copies).
Baggage List (5 copies).
Crew List (7 copies).
Sailing Permit from Last Port (1 original).
Stores List (5 copies).
List of Personal Effects (3 copies).
List of Contents of Slop Chest (3 copies).
List of Passengers in Transit (5 copies).

Cargo documents. The Port of Caripito has in force a system of cargo documentation for expediting the sailing of vessel. It is as follows:

a. Certain documentation with approximate cargo figures of unofficial nature are placed on board and official cargo documents are airmailed to discharge port.

b. Blank signed documents are placed on board to vessel's departure from Caripito and thence correct figures are radioed to sub-agency at Guiria who delivers them in writing to Master, who acknowledges its receipt by signing carbon copies of transmittal sheet.

PILOTAGE: Pilots are employees of Venezuelan Government and act in an advisory capacity. The Master retains responsibility for ship at all times. In the event it becomes necessary to disregard the Pilot's instructions in order to ensure the safety of the ship, the Master must forward through the Marine Department a full written report of the circumstances, for delivery to the Captain of the Port.

Pilots are compulsory and are embarked and disembarked at port of Guiria through a sub-Agent. Vessels should proceed to the Guiria Sea Buoy (position Lat. 10° 33′ 12″ N., Long. 62° 15′ 00″ W.) and await instructions. If arriving during the hours of darkness, certain instructions are usually transmitted by light signals from the signal tower. Voice radio communications can be established at any time with Guiria or Lagoven Caripito on frequencies 2182 kHz, 2638 kHz and 2738 kHz. The launch which embarks the Pilot will also deliver instructions to the Master relative to the movements of his vessel en route to Caripito, port regulations, facilities, etc. The regular pilotage fees cover the area from the entrance to Maturin channel to and from Caripito. The Pilot is to be provided sleeping quarters and food equal to that provided the officers aboard ship.

Note: Complaints or observations concerning the Pilot's handling of vessel should be noted on back of pilotage ticket.

TIDES: The normal range of tide in the dock area is about 12 ft. with currents up to 3 knots during the flood and 4 knots during the ebb in rainy season (May-December). The normal current is 2.5 knots during the flood and 3 knots during the ebb.

ANCHORAGE: For vessels awaiting berth, there is an anchorage about 1,000 m. up-stream from the Caripito Terminal. Vessels awaiting clear channel may at times be requested to anchor at Punta Marieta. Vessels awaiting high tide anchor at Punta Marieta or off Punta Gorda.

MAX. SIZE: Vessels up to 745 ft., 52,000 d.w.t. and max. draft *33 ft. (FW) at No. 2 berth and LOA 630 ft., 32,000 d.w.t. and max. draft *33 ft. (FW) at No. 3 berth.

*Safe draft per tide tables.

RADIO: The cable and telegraphic address for Lagoven at Caripito is "Lagomar – Caripito". Messages to and from ships at sea are routed through the Government Radio Station at Maiquetia (La Guaira), call letters "YVG". This station operates on a 24-hour continuous watch, on the following frequencies:

Listening Frequencies: low frequency, 500 kHz; high frequency, 4178, 6267, 8356, 12534, 16712, 22225 kHz. Transmitting Frequencies: low frequency, 500, 472, 464, 417 kHz; high frequency, 4322, 4352, 6505.5, 6519.5, 8722, 8730, 12817.5, 17141.6 kHz. Radio notice of arrival should be sent 72 hours prior to arrival at Guiria and corrected if weather or other conditions delay the vessel.

Radio telephone listening watches are maintained on a 24-hour basis at Guiria and at Caripito on 2182 kHz. The following frequencies are available for communications after contact: 2638 kHz and 2738 kHz.

All vessels en route to Caripito may also communicate with Amuay or La Salina Marine offices and request that message dealing with corrected ETAs, Pilots and other business be relayed to the Caripito Marine Office.

Vessels that were originally cleared for another foreign port, or another Venezuelan port, and were subsequently diverted at sea, should radio the following information to Lagomar Caripito prior to arrival:

Vessel's name
Master's name
Vessel's flag
Number of crew
Estimated time of arrival
at Caripito

Last port of call
Port for which originally
cleared
Grade and quantity of cargo
to be lifted

This information is required in order to make in advance special arrangements for inward clearance, to avoid payment of a fine. It is necessary in such a case that the following documents be ready on arrival:
Crew List (original and 6 copies).
List of Personal Effects (original and 2 copies).
List of Contents of Slop Chest (3 copies).
Stores List (original and 1 copy).

Also required are the original and 2 copies of the radiogram instructing Master to proceed to Caripito. Outward clearance documents are placed on board the vessel prior to departure from the Caripito terminal.

Masters should bear in mind that while vessels are within Venezuelan territorial waters, Government Authorities do not permit the use of ship's radio equipment. Cables and radiograms should be handed to the company representative for transmittal via shore radio communication system. Caripito has also radio telephone communication with North and South America and Europe. For further information contact Port Services Section in the terminal building, telephone C-335.

BALLAST: Ballast is not required when mooring. Any ballast carried should be in a minimum number of tanks, and all other tanks stripped, so as to minimise deballasting time.

A relatively small amount of salt water remaining in ship's tanks or lines can contaminate crude and cause operating problems for the refiners. It is important therefore to strip tanks and lines as dry as possible.

Vessels provided with completely segregated ballast system are permitted to discharge ballast and load cargo simultaneously. All ballast clean or dirty must be pumped ashore. Contaminated residues may be pumped ashore, where facilities are available for receiving up to a max. of 20,000 barrels.

A considerable number of vessels are now participating in the programme to eliminate pollution of the seas. Under this programme, vessels may arrive carrying quantities of oil/water emulsion. If it is desired to follow the "load-on-top" procedure in such instances, it is requested that the Marine Representative be informed on arrival.

BERTHING: The Marine Office Building is located on the West bank of the San Juan River upstream from the berths. Representatives of the Marine Department board vessel immediately upon arrival and it is particularly requested that Masters indicate at that time all ship's requirements. Personnel are available for assistance at all hours.

Lagoven maintains a deep water terminal, consisting of 2 ocean tanker berths, Nos. 2 and 3. These are T-type piers with breasting dolphins located approximately 10 ft. off the face of each pier.

All terminal facilities are under the control of Lagoven, S.A. The port is open for navigation during day and night. All ocean tankers are moored at berths No. 2 and 3 on the flood tide only. Vessels may sail from berth No. 3 at any stage of the tide. Sailings from berth No. 2 are restricted to flood tide only when berth No. 3 is occupied.

A vessel entering or leaving port must be assisted by the same Government Pilot taken aboard at Guiria. A Custom guard will board at the same time and remain with the vessel. A Lagoven Representative will deliver to the Master his loading and docking instructions together with any other information pertinent to the vessel's call. He will also sign the Notice of Readiness if requested. The vessel will proceed to anchor to await flood tide to dock, to await berth, or will swing to the flood tide in the turning basin and proceed directly to the berth depending on circumstances.

LOADING: Loading rates, particularly for low-flash products loaded during the hours of darkness or when topping off cargo tanks, will be reduced by terminal to meet existing conditions.

All loading and discharging will be stopped during passage of an electric storm, and ullage covers must be closed and dogged down. During periods of calms, loading of gasoline or other similar low-flash products may be loaded at reduced rates or loading stopped if the heavy vapours are not being dispersed quickly enough to prevent hazard from accumulated gas pockets. Ship's officers are cautioned to be on their guard during such conditions.

Loading rates will be reduced when topping off, if requested by the ship's officer.

Instructions as to grade or grades of cargo, and the approximate loading rate anticipated, will be given to the Master. Supplementary information including number and size of lines and hoses will be furnished to the Chief Officer before loading commences.

If vessel's loading orders from Owners or charterers do not agree with terminal's orders, either as to grades or quantity, the marine representative should be advised immediately. The terminal is authorised to load 10% more or less than the quantity nominated; if the cargo to be lifted will be more or less than 10% limitation consultation is necessary.

A terminal employee is stationed at each pier during the entire time the ship is discharging ballast, bunkering, or loading cargo. Fifteen minutes "standby" notice should be given to this man prior to completion of ballast, bunkers, or cargo.

MEDICAL: Medical treatment and hospitalisation, if required, is provided at a hospital located in the concession. Several dentists are located in the town of Caripito. Authorisation forms for medical and dental treatment are provided, which require Master's signature. Transportation is available at the Marine Office. Please note that if the patient does not speak Spanish or English, an interpreter should accompany him.

FRESH WATER: Fresh water is available in any quantity. Delivery is made through 2.5 in. national standard fire hose thread hydrants. Ship's personnel must provide hoses and connect up.

FUEL: Bunker "C" fuel oil, marine diesel and intermediate fuels are available. It is the responsibility of ship's engineer to give "stand-by" notice to the terminal employee and advise him when to shut down.

CONSULS: There are no consular representatives in the area. Vessels bound for U.S.A. or British Caribbean ports will be provided with a letter stating this fact.

CERTIFICATES: All ships calling at a Venezuelan port for the first time must be measured for tonnage by Captain of the Port. It is the usual practice to take ashore the ship's Panama Canal or Suez Canal Certificate, which is used as a basis for recalculating tonnage under the Venezuelan regulations, and is returned before sailing. The Venezuelan Admeasurement Certificate, when later issued is forwarded to the Owners. A fee is charged for this certificate, which is payable only on ship's first call. Vessels registered in following countries are excluded from above regulations: Denmark, France, Germany F.R., Ireland, Netherlands, Norway, Portugal, Sweden, United Kingdom and U.S.A.

CUSTOMS: While the vessel is in port, Venezuelan National Guard officials are assigned on board to ensure compliance with Customs regulations. The law requires that meals be supplied to these officals during regular meal hours. Masters are requested to give them the privilege of eating in the officers' messroom, to avoid difficulties.

Venezuelan laws are strict in regard to contraband and Masters are requested to instruct their crews not to take cigarettes or other articles ashore. Cigarettes in carton lots, cigars, tobacco, souvenirs, gifts (particularly items of women's apparel) should be collected prior to arrival in port, listed with the items in the slop chest and placed in the custody of the Master for deposit in the slop chest or closet which will then be sealed for the duration of the vessel's stay in port.

Firearms on board any merchant vessel calling at Venezuelan ports must not exceed 1 per officer, nor can ammunition exceed 18 cartridges per officer. All firearms and ammunition must be noted on the stores list. Officers must not carry firearms while ship is in Venezuelan waters and these side-arms and ammunition should be collected and held in the Master's safe custody. Crew members should be warned against taking knives or other weapons ashore.

REPAIRS: Only minor repairs of an emergency nature can be made. There are no electronic repair services available in the area.

SHORE LEAVE: Shore leave is permitted and a representative of the Captain of the Port boards on arrival and issues the required number of passes. Shore passes are to be collected prior to sailing, and given to the Lagoven Despatcher undocking the vessel. Vessels are not permitted to sail until all crew members are on board, unless hospitalised or prior arrangements made for disembarking.

TIME: Local time is GMT minus 4 hours.

GENERAL:

Gangways: Gangways at berths No. 2 and 3 are provided by the terminal.

Plimsoll Marks: The Captain of the Port requires that the Plimsoll Marks of all vessels using the port be clearly visible. Vessels will be checked on completion of loading, and if the Plimsoll Marks are not readily legible, permission to sail may be withheld.

Surveyors: There are no appointed surveyors to the American Bureau of Shipping or Lloyd's in the area. With 48 hours' notice, non-exclusive surveyors can be obtained from Caracas, or at times from Puerto La Cruz, or qualified Masters or chief engineers may be available for appointment as surveyors when required.

Bonded Stores: Cigarettes or other stores in bond are not obtainable at Caripito.

Cash Advances: The local currency is the Venezuelan Bolivar and cash advances are made only in this currency. It is requested that any requirement for cash advances be included in the vessel's radio ETA, to permit delivery on board on arrival. Cash returns can be accepted only during the normal working day – 0700 to 1600 hrs. Sundays and holidays excluded.

Provisions and Stores: Provisions and stores in extremely limited varieties and quantities are available at prices considerably higher than in most other ports.

Charts: No supplies of charts or sailing directions are available at Caripito.

Personnel – Seamen Left Ashore: In the case of seamen left ashore for hospitalisation, repatriation or other reason all documents and personal effects are to be delivered to the Marine Office before sailing. A letter is required from the Master advising the maximum advances to be made to the seaman, if any, and instructions concerning his repatriation. All expenses incurred by seamen left ashore, including cost of repatriation, are for ship's account. It is important that Masters bear in mind that the Venezuelan law will at all times hold the vessel, her Master, Agent or owner, responsible for any seamen left behind in Venezuela.

Laundry; Laundry service is available.

Lubricating Oil: Supplies of marine lubricating oils are available from Puerto La Cruz. Quantities required should be included in the ETA cable.

Mail: Any pending ship's mail will be delivered on board by the marine dispatcher on arrival at Caripito. At the same time he will receive any ship's mail to be dispatched. The marine dispatcher will accept personal mail only if it carries the proper amount of Venezuelan postage, or if Master authorises postage by signing 7 copies of the Company Post Transmittal form. Masters interested in knowing the individual postage amounts to be paid by each crew member, should provide a list, in duplicate, of the senders, and number of letters sent by each one identified by a number written on each letter. Copy of this will be returned aboard vessel when leaving this port outward bound. If not ready on time, it will be air-mailed to the vessel's next port of call.

Inspection – Petroleum Products and Crude Oil: Charles Martin & Co. and E. W. Saybolt, petroleum inspectors, are available from Puerto La Cruz if specified.

Visitors: All visitors to ships are prohibited except those company employees, petroleum inspectors, etc., whose duties require their presence aboard.

Passengers: Passengers will not be permitted to disembark unless in possession of the required visa and documents. To facilitate clearance, if passengers are carried, the Master should include advice to this effect in his radio ETA.

Pollution of Harbour and Coastal Waters: The laws of Venezuela are strict in regard to pollution of harbour and coastal waters by oil, and heavy fines are imposed for violations. No dirty ballast, oil or bilge slops are to be pumped or allowed to escape overboard. All overboard discharge valves from cargo tanks and bilges are to be secured before loading or discharging commences. Loading is to be conducted with greatest care and vigilance in order that errors or delays in handling cargo valves may not result in overflows. All deck scuppers should be plugged before loading to avoid harbour contamination should an overflow occur. The authorities require that a written report be submitted by the ship involved in the event of an oil spill.

EL CHAURE: 10.15 N. 64.37 W. (See Plan)

OPERATORS: Corpoven S.A.

LOCATION: El Chaure Marine Terminal is located on the South shore of the head of Bergantin Bay. 1.8 miles N.E. of Puerto La Cruz: Lat. 10° 14′ 50″ N. Long. 64° 36′ 57″ W.

This terminal is also considered to be Berth No. 6 of 'Puerto La Cruz' which also see.

DOCUMENTS: To avoid penalties, ships clearing for Venezuelan Ports must present certain papers herein set forth for arrival and clearance after docking. The Clearance is made by Government officials accompanied by a company representative.

The following documents must be presented:

1 copy of Ship's register
Clearance from last port
1 copy of Ballast Certificate
6 copies of Crew list
5 copies of Passenger and baggage list
2 copies of List of passengers in transit
4 copies of List of personal effects
4 copies of Stores list
2 copies of List of slop chest
Sailing permit issued by Marine Authority of last port of call.
Dispatch issued by Venezuelan Consul at last port.

PILOTAGE: Pilots are employees of the Venezuelan Government and pilotage is compulsory for vessels entering or leaving the harbour. The Company will arrange for Pilots to board all vessels as necessary. Whenever it might be deemed necessary for the Master to disregard the Pilot's advice in order to ensure the safety of the vessel, a written report must be submitted by the Master to the Venezuelan Port Captain, explaining the reason for such action.

ANCHORAGE: The crossed line portion on the plan is the anchorage zone for all ships after arrival at Pozuelos Bay. The Company will dispatch the Pilot, by launch, to all ships when they are ready to be docked. On entering the Pilot Zone, the Venezuelan flag must be flown from the foremast; it must be flown at all times between sunrise and sunset.

MAX. SIZE: Max. draft 40 ft., max. LOA 750 ft. max. d.w.t. 60,000 tons.

RADIO: El Chaure Terminal Office may be contacted on radio-telephone SSB or AM frequencies of 2738, 2638, 2182 and 2120 KHz. Frequency 2182 kHz should be used for initial contact.

Arrival advice: Masters are required to advise by cable their ETA. Such notice should reach El Chaure at least 48 hours ahead of vessel. In cases of ships being diverted at sea to a Venezuelan Port, or to another Venezuelan Port, Venezuelan regulations require, by cable, prior to arrival, name of Master, number in crew, port of departure, port to which originally cleared, flag of ship and net registered tonnage.

VHF: Channel 16 can be used after arrival at Pozuelos Bay.

TUGS: Tug assistance to moor and unmoor is compulsory at El Chaure installations. Ships over 145 m. long must use 2 tugs having not less than 1,600 h.p. each for mooring and unmooring at El Chaure. 1 launch is required for handling the lines.

BERTHING: The wharf has a length of 100 ft. with dolphins established on each side. The dock accommodates vessels drawing up to 40 ft. Sea conditions are usually very good in the entire area. Waves are almost nil and out of the hurricane path. A chain of small islands makes El Chaure a natural port. Only 1 vessel at a time can be moored for loading or unloading. The normal range of the tide is 1 ft.

BALLAST: Vessels arriving in El Chaure must carry sufficient ballast to ensure safe handling. By Venezuelan Law, all dirty ballast must be pumped ashore into ballast pits. Vessels having separate clean tanks for ballast may pump overboard, after first being inspected and passed by Port Authorities. The Company Terminal facilities include a 16 in. ballast line, which empties into ballast pits about 3,500 ft. from the dock. These pits have an elevation of 32 ft. above the dock and will hold 50,000 bbls. The ballast line will stand a pressure of 100 p.s.i.g. The pressure is recorded at the dock. The vessel will be held responsible for damages to the shore ballast line and spills that maybe occur because of line rupture.

LOADING: Before tying up, blind flanges on the ship's manifold should be removed, hose derrick to be topped and rigged to lift shore hoses along with dock booms. All vessels must dock with starboard side to dock. The Company dock supervisor will inform the Master of the vessel as to characteristics of cargo to be loaded, loading rates and all other information necessary for safe and efficient loading operations. During the ship's stay at the dock, company employees are available at all hours to assist in any manner. After loading is completed, if the dock space is required for another vessel the ship must vacate the berth and wait at anchorage until cargo and sailing papers are completed.

FRESH WATER: Available, rate 10 t.p.h.

REPAIRS: Facilities are limited; any repair work must be requested by Master in writing.

CONSULS: The following are in Puerto La Cruz: Belgium, Brazil, Colombia, Denmark, France, Germany F.R., Italy, Norway, Panama, Spain, Sweden and United Kingdom.

SURVEYORS: Aivepet, Charles Martin & Company and E. W. Saybolt maintain offices in Puerto La Cruz for inspection of cargo if required.

TIME: Local time is 4 hours slow on GMT, year round.

POLLUTION: Pollution of coastal waters is strictly forbidden by Venezuelan Law. The escape of dirty ballast or of cargo either at the dock or in the harbour or in territorial waters will result in heavy fines by Venezuelan authorities. If oil is spilled an estimation of quantity should be made by the Master of the vessel, Venezuelan Authorities and Company personnel, acting jointly. Their joint report must be submitted to the Venezuelan Petroleum Inspector from the Energy and Mines Office, and also the National Guard Headquarters in Puerto La Cruz. The Ministry of Energy and Mines will assess a fine based on the quantity of oil that was spilled. Also the ship is held responsible for the spill and cleaning. Chemicals, equipment, boat and labour used for this purpose are for the ship Owner's and/or operator's account. Each ship must maintain strict supervision on discharging of ballast as well as loading cargo in order to avoid spillage.

CUSTOMS: Venezuelan laws are strict in regard to contraband and Masters are requested to instruct crews not to take cigarettes or other articles ashore.

GENERAL: *Crew:* Passes for shore leave for ship's crew will be given to Master by Company Representative on docking or at anchorage. These passes must be filled out for each Crew member prior to Venezuelan authorities' visit. Passes may be used during the ship's stay but must be returned to the National Guard at the dock prior to departure. Before ship's departure a report must be made to the Dock Master if any Crew member is missing. Crew members left behind will be placed in custody by Venezuelan authorities until deported at vessel's expense. A Crew member requiring medical or dental treatment must submit his request for such aid through the Master to the Dock Master. Arrangements for seamen arriving from other ports, transferring to other ships or being repatriated are handled by the vessel's Agency.

Under the Venezuelan law the vessel is responsible for all seamen in the country during their entire stay. Masters are requested to leave written instructions with the Dock Master for handling seamen left ashore. The Master of the ship must indicate his acceptance of the responsibility for all costs incurred in handling a seaman.

Seaman Left Ashore: A letter from the Master is required advising the amount of cash advance and any other instructions concerning the seaman's repatriation. All expenses incurred by the seaman, including the cost of repatriation are for the vessel's account. The documents and personal effects of seamen left ashore for hospitalisation, repatriation or any other reason, must be delivered to the Terminal Office before sailing. Venezuelan Law holds the Master, ship's representatives and Owners responsible for any seaman left behind in this country.

In Dock: Masters are requested to observe the following regulations while alongside the Company Terminal:

1. – Sufficient number of Crew members must be on board at all times, during discharge of ballast and loading of cargo to ensure proper handling of mooring lines.
2. – Rat guards are to be on all mooring lines during entire stay.
3. – Venezuelan authorities do not permit blowing of heavy smoke from vessel's funnel, while in port. Breaking of this rule may result in Government fine and/or removal of ship from the dock.
4. – Venezuelan National Guard personnel are assigned to guard duty for each ship while it is at the dock. Meals must be furnished for these guards in the Officers' Messroom.

Visitors: All visitors to vessels are prohibited, without written permission of the Port Authorities. Dock Master, Petroleum Inspectors, Dispatchers and Terminal employees handling hoses may board ship in performance of their duties.

Charts: Not available at El Chaure.

AGENCY: All incoming vessels must have a local Agent to render all services required for a prompt and efficient tanker turnaround and to cancel all vessel disbursements.

EL GUAMACHE: 10.52 N. 64.04 W. (See Plan)

SHIPMASTER'S REPORT: October 1978.

LOCATION: The Port of El Guamache is a new developing port, located about 1000 feet northward of Pta. Mangle on the Isla De Margarita (see B.A. Chart 230).

DOCUMENTS:

Clearance from last port.
Sealed envelope for Customs.
Visaed B/L and Sobordos.
Despatch from last Venezuelan port, if any.
6 Crew Lists.
Vaccination Certificates of Crew.
4 Store Lists (Deck, Engine, Provisions, Bonded store).
4 Personal Effects Lists.
4 Arms & Ammunition Lists.
4 Passengers Lists.
4 Mail Lists.

ANCHORAGE: On the Western side of the Pta. Mangle in Bahia Guamache, depth 8–11 fathoms.

PILOTAGE: Pilotage is compulsory. Pilot boards on arrival or at anchorage. Vessels arriving at the anchorage must keep engines on stand-by and wait for shifting or berthing instructions.

Note: As at other Venezuelan ports, vessels must fly the Venezuelan flag at masthead and lower gangway for boarding party – Agents, Customs Officers, Quarantine Officers, Immigration Officers, Pilot and representative of Port Captain, etc.

RADIO: As a new developing port, no radio service at Margarita Island, all ETA wireless messages must be sent via ITT or YVG – 72, 48, and 24 hours prior to arrival

The port office is equipped with radio telephone installation, operating 0600-2000 hours, transmitting on VHF frequencies 156.8 MHz (Channel 16.) Vessels calling in Spanish language will be answered promptly; if calling in English will be answered by English speaking person when on duty.

TUGS: Not available.

BERTHING: Length 126 m. with 3 dolphins installed at each end with catwalk to dolphins. Depths of water, 36 ft. at LW and 42 ft. at HW.

STEVEDORES: Arranged by Agents, normal working hours 0700-2100, cargo discharged into warehouse.

GANGWAY/DECK WATCHMAN: Necessary, normally engaged by Customs or Police.

OPENING/CLOSING HATCHES: Normally by crew.

FRESH WATER: Not available.

FUEL: Not available.

TIME: Local time is GMT minus 4 hours.

AIRPORT: Distance about 15 km. from port. Connections to other cities.

MEDICAL: Available at Polamar City about 31 km. from the berth.

PROVISIONS: Fresh and dry provisions supplied through ship chandlers from Polamar City and delivered on board.

CUSTOMS ALLOWANCES: 200 cigarettes and 1 bottle of wine or spirit.

REPAIRS: No repair facility available.

TELEPHONE: No telephone connection to vessel at present but provided inside warehouse and port office.

DENSITY: 1025

HOLIDAYS: As other Venezuela ports.

SHORE LEAVE: Shore leave permitted. Passes issued by representative of the "Direccion De Marina Mercante" on arrival. Shore passes to be collected prior to sailing and given to Agent.

DEVELOPMENTS: El Guamache has a development programme to construct new wharves Northward from present pier to accommodate 6 ocean-going vessels and expected to complete within 3 years.

All port facilities will be available. Margarita Island is the only free port in Venezuela. Tourism from the mainland and overseas is increasing day by day as Margarita Island has very good weather and beaches.

EL PALITO: 10.29 N. 68.07 W. (See Plan)

OPERATORS: Corpoven S.A.

LOCATION (of El Palito Terminal)**:** The terminal facilities operated by Corpoven S.A. at the port of Puerto Cabello (Punta Chavez), are situated on the Venezuelan coast, 7 miles West of Puerto Cabello. The terminal has a 2,475 ft. pier, part causeway and part trestle, extending out from Punta Chavez along a shallow reef then angling into water 48 ft. deep. 2 tankers can tie up simultaneously at the berths.

WEATHER: Winds are normally from the N.E. with an average Beaufort scale force of 2-3. Average temperature about 85°F. The months of January, February and March have the roughest sea and swell, and vessels may not be able to dock due to the weather.

TIDE: The normal range of the tide is 1 ft.

ESSENTIAL REQUIREMENTS:

1. Incoming vessels must send ETA 72 hours before arrival at El Palito Terminal and another 24 hours before arrival advising any change of ETA.
2. If a vessel originally cleared for another port (including some other Venezuelan port) is diverted at sea to El Palito, certain information must be received prior to arrival, to avoid heavy fine and/or delays.
3. *No Ballast* may be pumped overside in port. Ballast disposal facilities are available at the El Palito Terminal.
4. The use of Venezuelan Government Pilots is compulsory for docking and undocking.
5. The Venezuelan flag should be displayed at the mast-head during daylight hours by vessels anchored and berthed in Venezuelan waters.
6. In addition to other clearance documents, 2 copies of an itemised list of articles in the ship's slop chest must be presented to the authorities on arrival.
7. The emergency fire signal is 5 long blasts on the vessel's whistle or siren. No other signal is to be given in case of emergency.
8. Rat guards must be in place on all mooring lines.

APPROACHES: The terminal pier is marked by the following lights: One occulting red light at the top of No. 1 (N.W.) Hose Rack, 80 ft. above sea level. Lat. 10° 29′ 51″ N., Long. 68° 07′ 13″ W., and one green light, flashing every 3 seconds at the top of No. 2 (S.E.) Hose Rack, 80 ft. above sea level, located 275 ft. S.E. of No. 1 Hose Rack. A group of 5 crude storage tanks, painted aluminium, visible 20 miles on a clear day, are located 1.25 miles 200° from the head of the pier.

DOCUMENTS:

A. Admeasurement Certificates. All vessels calling at Venezuelan ports for the first time must be measured for tonnage by the Captain of the Port. It is the usual practice to take the Ship's Panama Canal or Suez Canal Certificate, which is used as a basis of recalculating the tonnage under the Venezuelan Regulations and is returned before sailing. The Venezuelan Admeasurement Certificate is forwarded to the owners at a later date. A fee is charged for the certificate which is payable only on the vessel's first call. Vessels registered in the following countries are excluded from the above regulations: Denmark, France, Germany (F.R.), Ireland, Netherlands, Norway, Portugal, Sweden, United Kingdom and U.S.A.

B. Inward clearance is effected on board immediately after docking by Government Port Officials and a representative of the Marine Department. It is necessary that the following documents be ready on arrival:

Clearance from last port (1 copy).
Ballast Manifest from last port (1 copy).
Crew List (9 copies).
Passenger and Baggage Lists (7 copies).
List of Personal Effects (5 copies).
Store List (3 copies).
List of Slop Chest (3 copies).
Sailing Permit (issued by maritime authority of last port).

Vessels arriving with cargo to discharge, will also require:

Manifest (Sobordo), 1 original and 2 copies from each loading port.
Bills of Lading, 1 original and 5 copies from each loading port.
Tally books; 6 from each loading port.
Commercial invoices: 3 from each loading port.

Vessels originally cleared for another port, and diverted at sea to El Palito, should radio Corpoven Puerto Cabello the following information as soon as the change of sailing orders are received:

Advise diverted.
Name and class of vessel.
Number of crew.
Flag of vessel.
Last port of call.
Port from which originally cleared.
Estimated time of arrival at Pilot station.
Type and amount of cargo vessel will load.
Time required to discharge ballast.
Master's name in full as signature (John Jones, Master).

This information is required in order to make in advance special arrangements for inward clearance to avoid payment of fines.

Outward clearance and cargo documents are delivered on board by the Marine Dispatcher. However, in order to obtain the sailing permit, a special form which is delivered on board on arrival must be completed, not later than 2 hours before sailing time. This form gives cargo and freeboard information required by the Captain of the Port. In addition, one of the 9 copies of the crew list specified above, corrected to show any changes made while in port, should be attached to the form.

HEALTH: No Radio Pratique. Health Officers board vessel at berth.

RADIO: Puerto Cabello, Venezuela, Coastal Station call sign YVL, makes radio contact with all vessels "CQ" on 8722 kHz at the following hours: 1130, 1330, 1530, 1830, 2130, 0030, 0200 GMT. Also "CQ" on 17141 kHz at 1630 GMT and "CQ" on 4322 kHz at 0430 and 0630 GMT.

VHF: Master should call El Palito Marine Terminal 3 hours before arrival on Channel 16.

PILOTAGE: The Pilot's working hours are from 0600 to 1800 hrs. There are no special charges for their assistance during those hours on workdays. On Sundays and holidays they charge overtime. There is also a charge when ship has anchored in the bay as according to the pilotage law each movement (and entering the bay is one movement) requires a Pilot. By special agreement only Pilot's overtime will be charged for anchorage, as anchorage and docking is considered as one movement with respect to Government Pilotage Fee.

Pilotage is a compulsory government service. The government charges the Pilot's assistance according to ship's net tonnage. Vessels under flags of Panama and Liberia are required to have their Venezuelan Tonnage Certificate. The government charges for docking and sailing.

Pilots are employees of the Venezuelan Government and pilotage is compulsory for vessels entering or leaving the harbour. The terminal will arrange for Pilots to board all vessels as necessary. Pilots meet the vessel via launch provided by the terminal. The Pilot may decline to moor the vessel if it is not equipped with satisfactory mooring equipment, lines, gear, etc., or if it is not sufficiently ballasted. It is the responsibility of the Master to notify the Pilot of any special conditions or peculiarities, such as defective navigation equipment, mooring lines, tackle, gear or lack of necessary equipment, which might impose hazards in connection with the handling, mooring, discharging or loading of vessels.

At the berths, vessels must be moored to the entire satisfaction of the Pilot and the terminal operators' Mooring Master.

The Pilot acts in an advisory capacity. The Master retains responsibility for the vessel at all times. In the event it becomes necessary to disregard the Pilot's advice in order to ensure the safety of the vessel, the Master must forward a full written report of the circumstances through the terminal for delivery to the Captain of the Port.

ANCHORAGE: Notice of Readiness can be tendered at anchorage. The suggested anchorage for El Palito Terminal is located 0.5 to 1 mile North or West of the seaward end of the pier. The area to the East of the pier is not recommended as an anchorage.

RESTRICTIONS: None. Vessels enter day or night and at any state of tide.

MAX. SIZE: East berth draft 38 ft. West berth draft 40 ft. Length 730 ft.

BALLAST: Due to the exposed location of the oil piers, vessels are required to be ballasted to the following minimum drafts for safe manoeuvring to and from the berths:

Overall Length of Vessel	*Minimum Draft Required*
400 ft. – 480 ft.	Forward 9 ft., Aft 17 ft.
481 ft. – 700 ft.	Forward 12 ft., Aft 20 ft.
701 ft. – 730 ft.	Forward 14 ft., Aft 23 ft.

A total capacity of 65,000 barrel tank and a 20 in. ballast line are available to receive all ballast.

Vessels with separate ballast tanks, lines and pumps may discharge ballast overside. Ballast for entering the harbour should be carried in the minimum number of tanks, and all other tanks stripped dry so as to minimise the time required for discharging ballast alongside berths.

All ships in ballast from abroad are charged for Consular Ballast Certificate.

TUGS: Use of tugs compulsory. Usually 2 tugs, from 1,500 h.p. to 2,800 h.p. approximately, assist during docking and 1 (1,600 h.p.) during undocking.

BERTHING:

The use of both anchors is required for docking at both berths. It is considered prudent to have both anchors hove-out prior to entering the harbour in order to facilitate speedy release while mooring. The Pilot will advise whether the vessel is to be moored port or starboard side to the dock.

In the event the berth is required by another vessel, a vessel having completed loading may be required to vacate the berth promptly and proceed to anchorage to await cargo documents.

East Berth: Approach at very dead slow speed along a line parallel to a line formed by the East and the West berth at a distance from it equal to the distance of the North buoy. Drop the starboard anchor at the point of intersection of the ship's fore with a line formed by the two East shore range markers. Continue along same path at very dead slow speed until reaching with the ship's fore the East berth. Drop the port anchor. Allow the ship to drift into position alongside berth. This will be done by tying mooring lines as required by Pilot and with the help of the ship's engines.

West Berth: Approach at very dead slow speed along a line parallel to a line formed by the East and West berths and at a distance from it equal to the distance of the North buoy. Drop the port anchor at the point of intersection of the ship's fore with a line formed by the two West shore range markers. Continue along same path at very dead slow speed until reaching with the ship's fore the West berth. Drop the starboard anchor. Allow the ship to drift into position alongside berth. This will be done by tying mooring lines as required by the Pilot and with the help of the ship's engines.

General: Available hose connections, all 8 in., are as follows: 3 for Fuel oil, 1 for diesel products and 1 for leaded or unleaded gasolines. All dirty ballast to be pumped ashore through the fuel oil loading hoses.

LOADING:

Cargo: On completion of inward clearance, information regarding the number of hoses and loading rate will be given to the Master and Chief Officer. During ballast discharge supplementary information will be given to the Chief Officer. A 15 minute standby is required prior to finishing any grade.

Contamination of Crude: It has been established that one of the major causes of contamination of crude oil is the small amount of salt water remaining in the ship's tanks, pumps and ballast lines after discharging ballast. This small amount of salt water frequently results in costly damage and downtime to refining equipment and also presents many other problems. Therefore all tanks and lines must be pumped as dry as possible.

Draining of Hoses: Hoses are drained by gravity on all products and crude. Ship personnel must co-operate with terminal personnel in this operation to ensure complete draining of hoses into ship tanks and adequate drip cans must be placed to catch the remaining oil in line. Sand or equivalent must be on standby to clean up any oil leaks.

Loading Rates:

Commodity	*Available at berths*	*Size of line* (in.)	*Estimated max. barrels per hour*	*Hoses* Pier 1 (in.)	Pier 2 (in.)
Crude oil	1 – 2	24	27,000	3×8	2×8
Bunker C	1 – 2	24	17,500	3×8	2×8
Diesel	1 – 2	16	8,000	1×8	1×8
Unleaded gasoline	1 – 2	16	8,000	1×8	1×8
Leaded gasoline	1 – 2	16	8,000	1×8	1×8
Ship's bunkers	1 – 2	24/16/8	6,000	1×8	1×4
Lub	1 – 2	8	2,000	1×8	1×4

Loading rates will be reduced by the terminal when topping off tanks at the vessel's request.

Scuppers: Loading will not be started till all deck scuppers are properly sealed to the satisfaction of the terminal.

Simultaneous Deballasting and Loading: Vessels equipped with separate and completely segregated ballast tanks, and lines and pumps never used for oil may be permitted to discharge ballast and load simultaneously providing approval has been obtained from the terminal.

MEDICAL: Medical treatment and hospitalisation, if required, are available at the Seguros Sociales in Puerto Cabello. Several dentists are located in Puerto Cabello. Authorisation for any medical and/or dental treatment must be made by the Master. Transportation is available at the Terminal Office. If the patient does not speak Spanish an interpreter should accompany him.

FRESH WATER: Not available.

FUEL: Bunkers are available only for vessels loading cargo. Disputes as to quantity should be registered by signing the bunker receipt under protest and noting the ship's quantities thereon.

CUSTOMS: While the vessel is in port, Venezuelan National Guard officials are assigned on board to ensure compliance with Customs regulations. The law requires that meals be supplied to these officials during regular meal hours.

Venezuelan laws are strict in regard to contraband and Masters are requested to instruct their crews not to take cigarettes or other articles ashore.

Cigarettes in cartons, cigars, tobacco, souvenirs, gifts (particularly items of women's apparel), should be collected prior to arrival in port, listed with the items in the slop chest and placed in the custody of the Master for deposit in the slop chest which will be sealed for the duration of the vessel's stay in port.

CONSULS: French, Norwegian, Danish, Italian and Panama Consulates are represented in Puerto Cabello. There is no American Consulate. It is necessary for Masters of Panamanian flag vessels to visit the Panamanian Consulate at Puerto Cabello to present documents and receive dispatch as required by law. Regular office hours are from 0800 to 1200 hrs. and from 1400 to 1700 hrs. Mondays through Fridays; any dispatch issued outside of regular office hours is billed at double fees. Terminal Office will arrange transportation to Puerto Cabello upon request.

REPAIRS: Only emergency repairs of a minor nature can be made. Prices are very high.

REPATRIATION: The documents and personal effects of seamen left ashore for hospitalisation, repatriation or other reason, must be delivered to the Terminal Office before sailing. A letter from the Master is required advising the maximum amount of advances to the seaman and any other instructions concerning his repatriation. All expenses incurred by the seaman, including the cost of repatriation, are for the vessel's account. Venezuelan law at all times holds the Master, Agent or Owner responsible for any seaman left behind in Venezuela.

AIRPORT: Distant about 4 miles.

TIME: Local time is about GMT minus 4 hours.

REGULATIONS:

Engines: No engine repairs will be made while the ship is in dock. Engines are to be kept at standby at all times while the ship is in port.

Rat-guards: Vessels must use rat-guards on all mooring lines.

Visitors: All visitors to vessels are prohibited, without written permission in each case by the Port Captain or his assistant. Mooring Master, petroleum inspectors, dispatchers, and terminal employees handling hoses may board ship in performance of their duties.

Pollution: The laws of Venezuela are very strict in regard to the pollution of harbour and coastal waters by oil, and heavy fines are imposed for violations. No dirty ballast or oil is to be pumped or allowed to escape over the side. No engine-room or pump-room bilges may be pumped overboard. All pump-room sea suctions and overboard discharge valves must be secured prior to loading or discharging cargo. Loading must be conducted with the utmost care and vigilance so that errors or delays may not result in spills. All deck scuppers must be plugged tight before loading so that in the event of a spill pollution of the harbour may not result.

Garbage: No garbage is to be thrown over the side while the vessel is in port.

Passengers: Passengers will not be permitted to disembark unless in possession of the required visa and documents. To facilitate clearance, if passengers are carried, the Master should include this information in his ETA.

Firearms: Firearms on board any merchant vessel calling at Venezuelan ports must not exceed one per officer, nor can the ammunition exceed 18 cartridges per officer. All firearms and ammunition must be noted on the store list. Officers must not carry firearms while the vessel is in Venezuelan waters and these sidearms and ammunition should be collected and held in the Master's safe custody.

SHORE LEAVE: Shore leave is permitted and a representative of the Captain of the Port boards on arrival and issues the required number of passes. Shore passes are to be collected prior to sailing and given to the National Guard watchmen on board.

Vessels are not permitted to sail until all crew members are on board, or special permission has been obtained to sail without a crew member.

GENERAL:

Bonded Stores: No cigarettes or bonded stores are available at El Palito.

Cash Advances: Cash advances are available in Venezuelan Bolivares only and should be included in the vessel's radio ETA, to permit delivery on board on arrival.

Charts: No charts or sailing directions are available at El Palito.

U.S.S. Club: There is no U.S.S. Club available at El Palito or film exchange service.

Inspection of Cargoes: According to prior arrangements between Owners/Charterers/Suppliers.

Laundry: Laundry facilities are available at El Palito.

Lubricating Oil: Certain types of Corpoven luboils only are available in small quantities. Requirements should be sent by radio with ETA.

Mail: Mail service posted from El Palito has been found to be fair.

Provisions: Provisions are available at El Palito.

Radio and Radar: Arrangements to be made with port Agents prior to arrival.

Gangways: Gangways are provided by El Palito Terminal.

AUTHORITY: Corpoven, S.A., – Refineria, El Palito, P.O.Box 102, Puerto Cabello 2023A, Edo Carabobo, Venezuela. *Tel:* (041) 422627, 421110, 421005, 423111 and 423115. *Telex:* 28013, 23571. *Cables:* Corpoven Pto. Cabello. *Contact:* El Palito Marine Terminal.

AGENT: See "Puerto Cabello".

GUANTA: 10.15 N. 64.35 W. (See Plan)

SHIPMASTER'S REPORT: 1978.

LOCATION: Lat. 10° 15′ N., Long. 64° 35.5′ W. About 5 miles East of Puerto La Cruz.

DOCUMENTS:

6 Crew Lists.
6 Passenger Lists (or negative).
6 Ship's Stores Lists.
6 Crew Personal Effects Lists (well detailed).
1 Declaration of Health.
Clearance from last port.
Cargo Manifests.
Full set of Manifests and B/Ls.

Entry Formalities: Normally carried out after docking unless there are no berths available; then vessel can be cleared at anchorage in Bahia Pozuelos, during daytime. At night only in case of emergency.

Accommodation ladder must be rigged.

Hours of entry: From 0700 – 1100 hrs. and from 1300 – 1700 hrs. Overtime outside these hours.

APPROACHES/PILOTAGE: A vessel bound for Guanta has to enter Bahia Pozuelos as she must first call at Puerto La Cruz to embark a Pilot. The anchorage area for waiting berth turn is also in Bahia Pozuelos. This anchorage is in depths of 48 ft. to 80 ft. and is well protected from swell by surrounding islands. No size limitation.

Bahia Pozuelos is the anchorage and Pilot embarking area for 3 ports: Puerto La Cruz, Guanta and Pertigalete.

The use of Government Pilot is compulsory for all vessels docking or undocking. ETA: 48 and 24 hours in advance via the vessel's Agent.

Pilot boarding hours: From 0530 – 1700 hrs. every day. Vessel cannot dock after sunset. Sailing may be arranged at any time.

HEALTH: All vessels boarded by Port Doctor. No automatic Pratique.

RADIO: Curacao Radio PJC. No local station.

VHF: All Agencies maintain radio watch on Channel 16 during office hours. Tugs and launches also equipped with VHF (call: "Ramrey").

TUGS: 3 tugs available: 1×1,700 h.p. and 2×1,200 h.p. All privately owned. Sometimes vessels bound for Guanta or Pertigalete have to wait for 2 or 3 hours as these private tugs have contracts with oil companies in Puerto La Cruz and are available only when no tanker is docking or undocking. Tug's lines used. Normally tugs join the vessel inside Guanta Bay.

BERTHING/MAX. SIZE: One concrete pier on piles, 763 ft. in length where vessels normally dock starboard side to. The apron is 20 ft. wide in centre, 42 ft. at ends.

One modern concrete pier on piles, 1,056 ft. in length where vessels normally dock port side to. The apron is 115 ft. wide in centre and 85 ft. at ends. The piers are well fendered with rubber hoses and used tyres.

Height of piers above HW: 10 ft. Mean tidal range: 1 ft. 6 in. Max. draft alongside small pier: 23 ft. 08 in. Minimum draft alongside long pier: 26 ft. 08 in. Depths varies from a minimum of 27 ft. to a max. of 34 ft. at the Western end of the long pier.

CARGO HANDLING FACILITIES: All cargo normally discharged by vessel's own gear, directly on to truck or trolleys. The piers are not connected to the railroad. No floating crane.

The following mobile cranes are available in the port area: 1 crane max. 120 tons; 1 crane max. 30 tons, with telescopic extension boom, max. 60 ft.; 2 small cranes max. 6 tons with a boom length of 30 ft.

Forklifts: 15 forklifts capacity 3.5 tons; weight 5.2 tons with fixed counterweight. To use these forklifts on board, the hoisting gear should lift over 6 tons.

2 forklifts capacity 5 tons, weight 12 tons; 1 forklift capacity 20 tons, weight 25 tons, specially for containers.

Flatbed trolleys: 30 trolleys capacity 8 tons; 1 trolley capacity 70 tons.

No lighters available.

All discharging gear normally supplied by Agency. For heavy lifts, it is recommended to have special slings on board.

BULK CARGO FACILITIES: On the Eastern side of the Guanta Bay, there is a berth for loading coal by means of a fixed chute. Depth alongside 30 ft.

Grain Cargo: Receivers supply suction machines. There are 2 machines available, capacity 1,000 tons per machine during 24 hours. Grain vessels work round the clock.

Liquid Cargo: Sometimes tallow and liquefied gas are handled. Discharged by vessel's pump into tank trucks. Hoses normally supplied by vessel.

CONTAINER HANDLING FACILITIES: No container berth. No crane. 1 forklift capacity 20 tons. There is a small container stacking area.

STEVEDORES: Normal working hours: 0700 – 1100 hrs. 1300 – 1700 hrs. (Monday to Friday); 0700 – 1100 hrs. (Saturdays).

Overtime: Monday to Friday, 1800 – 2300 hrs. (night shift); Saturday, 1300 – 1700 hrs.

Normally port does not work after 1700 hrs. on Saturdays or Sundays.

Ordering of gangs: For 0700 hrs. requested previous day before 1500 hrs. For 0900 hrs. requested same day at 0700 hrs.

Overtime rates: 50% for the night shift (Monday to Friday); 100% for Saturday afternoon shift.

The gangs consist of 12 longshoremen and 12 stevedores, including 2 winchmen, 1 signalman and 1 checker.

Capable supervision only available from Agency.

Rigging or cleaning gangs are available.

MEDICAL: Private hospitals at Puerto La Cruz. Private doctors generally do not visit ships. If medical attention is required on board, the Port Doctor will attend patient, unless he authorises another doctor to make the visit.

In case of emergency, when the vessel is anchored in Bahia Pozuelos, a launch can be arranged to pick up the sick crew member.

DENSITY: Salt water all the year round.

FRESH WATER: Available at 5 Bolivares per ton at the main pier only. Hoses supplied by ship. Rate: about 5 t.p.h.

Presently there is no water available at Berth No. 3 (Western end of pier).

FUEL: No Bunker "C".

Diesel: Delivered by trucks; arrangement must be made at least 24 hours in advance.

Gas Oil: Delivered by trucks under previous arrangement.

GARBAGE DISPOSAL: No facilities.

CONSULS: See "Puerto La Cruz".

REPAIRS: Only minor engine or electric motors can be repaired.

GANGWAY/DECK WATCHMEN: Not available. No shore gangway available.

DRY DOCK: Not available.

SURVEYORS: None.

CUSTOMS ALLOWANCES: 200 cigarettes and 1 open bottle spirits.

REPATRIATION: Can be arranged. No special requirements.

IDENTIFICATION CARDS: Passes for shore leave are issued by officials of the Port Captain's Office, when boarding the vessel for clearance. These passes should be filled out on board. They are valid for the duration of the vessel's stay in port only and have to be returned before sailing.

In order to comply with Immigration Regulations, crew should be carefully checked before departure and any missing seaman reported to the Agent. The same applies to passengers in transit.

AIRPORT: At Barcelona, about 15 miles by road. 3 flights daily to Caracas.

TIME: 4 hours slow of GMT, all the year round.

HOLIDAYS: New Year's Day, Holy Thursday, Good Friday, Holy Saturday, April 19th, May 1st, June 24th, July 5th, July 24th, October 12th, November 24th, Christmas. No labour available on these days.

TELEPHONES: No facilities at Guanta. Private calls can be made from the central office at Puerto La Cruz (5 miles) during the following hours: 0700–2100. Long distance calls dispatched quicker from the Hotel Melia at Puerto La Cruz.

SHORE LEAVE: From a ship anchored in Bahia Pozuelos: Allowed if the vessel has been cleared and if every crew member has shore pass. One private launch available but very expensive.

From Guanta berths: Allowed with shore passes.

DELAYS: Presently, Guanta is somewhat congested and the waiting time varies from a few days to 15 days, especially during the rainy season.

GENERAL: Venezuelan regulations strictly prohibit the pumping overboard of dirty ballast or throwing garbage or dunnage in territorial waters. Heavy fines are imposed for pollution of waters and sometimes fishermen are quick to report any infringement.

Berthing Turn: On the basis "first come, first served" but Venezuelan vessels have some priority.

Supplies and Laundry: Several private firms based at Pto. La Cruz. Nearly all kinds of fresh provisions are available.

Laundry service available; may be completed in 8 to 10 hours.

General: Guanta is a natural harbour surrounded by mountains which protect the bay completely in bad weather. The port has never been closed for bad weather.

Venezuelan Flag: Upon arrival at Pozuelos Bay ship should display the flag from the foremast at all times. When anchored or docked, the flag should be displayed only between sunrise and sunset.

Warehouses and Cargo Sheds: No transit cargo shed. No refrigerated storage available.

There are 5 warehouses with a total floor space of 75,000 sq.ft.

Open Space: A total of 5.7 acres, mostly covered with asphalt or concrete.

Weather: The rainy season starts in mid-May and ends in November or December. During the rainy season it is usually calm in the early hours of the day followed before mid-day by light Westerly or variable breezes. In the afternoon the breezes change to North-Easterly at about 12 knots until midnight. During the dry season the cycle is similar but the North-Easterly wind may reach 25 knots. This can prevent all communications between anchored vessels and the shore.

AUTHORITY: "INP" Instituto Nacional de Puertos.

SHIPMASTER'S REPORT: 1975.

LOCATION: Lat. 10° 14.7′ N., Long. 64° 35.5′ W.

Guanta is located in the Bay of Guanta. It is a well protected port against currents and winds.

The port is entered between 2 well lighted islets.

DOCUMENTS:

Maritime Declaration of Health (together with inoculation list of crew).
10 Passenger – (or non-passenger) Lists.
10 Transit passenger – (or non-transit passenger) Lists.
10 Crew Lists.
4 Personal Effects Lists. (new clothes, etc., to be mentioned).
4 Ship's Stores Manifests.
Clearance last Port.

PILOTAGE: Government pilotage is compulsory. Pilot is embarked and disembarked near the Sea Buoy of Puerto La Cruz, in position: Lat. 10° 15.5′ N., Long. 64° 41′ W.

ANCHORAGE: On the Pto. La Cruz Roads.

RESTRICTIONS: Entering: In daylight hours only: 0600 – 1800 hrs.

Sailing: Day and night.

TUGS: One powerful tug available, compulsory to use when ship's length more than 90 m.

BERTHING: *New Pier:* Length 322 m. *Old Pier:* Length 233 m.

Water Depth: According to Pilots information: *Old Pier:* 29 ft. *New Pier:* 34 ft.

STEVEDORES: *Working Times:* Monday to Friday: 0700 – 1100 hrs., 1300 – 1700 hrs., 1800 – 2300 hrs. Saturday: 0700 – 1100 hrs., 1300 – 1700 hrs. Sunday: No work is done.

Gangs have to be ordered by 1500 hrs. the day before required.

FRESH WATER: Ships can replenish their fresh water tanks without charge (Included in port charges). Own hoses to be used.

OPENING/CLOSING HATCHES: Opening/Closing hatches, setting derricks: Special Rigger gangs take care of this. It is absolutely forbidden for ship's crew to touch these kind of jobs.

GENERAL: *Waste Water:* Special care should be taken to prevent waste water, from sanitary or engine-room systems fouling the jetty. Heavy fines are made in case this happens and a special shore gang might be ordered to clean same.

Customs: 2 Customs Officers have to be provided with food.

OPERATORS: Servicio Portuario de Guanta.

GUARANAO: 11.40 N. 70.13 W.

SHIPMASTER'S REPORT: January 1983.

LOCATION: The port of Guaranao is located on the Gulf of Venezuela on S.W. coast of the Peninsula de Paraguana, Venezuela. It lies between Amuay Bay to the North and Punta Cardon to the South.

DOCUMENTS: Inward clearance is effected on board immediately after docking by Government Port Officials and a representative of the Marine Department.

The following documents must be ready on arrival:

Clearance from last port.
Crew lists (7 copies).
Passenger lists if any (5 visaed copies).
Baggage lists if any (3 visaed copies).
List of Personal Effects (4 copies).
Store lists (2 copies).
Sailing Permit (Zarpe).

PILOTAGE: Compulsory. Vessels have to wait for Pilot about 0.5 miles offshore at anchorage. Ship's can make contact with pilot station by VHF on Channel 16 or 12.

ANCHORAGE: Generally ships must anchor about 0.5 miles offshore to wait for Pilot. Good anchorage is obtained in depths of 28 ft. (8.5 m.), muddy bottom and depths of less than 18 ft. (5.5 m.) extend up to about 0.25 miles offshore in this bay, and depths of less than 36 ft. (11 m.) extend about 7 cables NNW from Punta Zarobon (Guaranao).

APPROACHES: Masters when approaching the coast should keep a sharp lookout for fishing boats, nets, small craft or sunken wrecks. From Punta Zarobon the coast, which is bordered by cliffs from 85 ft. to 65 ft. (25.9 m. to 19.8 m.) high, trends about 2 miles SSW to Punta Gorda.

RADIO: Arrival notices and radio messages to and from ships at sea are usually transmitted through Curacao (PJC) and routed through Agent's head offices at Caracas, Venezuela. The port radio control is Las Piedras Paranagua.

TUGS: One tug is available to assist with berthing/unberthing.

BERTHING: A pier extends about 3 cables Westward from shore at Salinas, Guaranao, and the Southern half of this pier is for Ro-Ro vessels stern to. A floating pier about 1 cable distance South of and parallel to the former, extends Westward from shore about 810 ft. (247 m.) and is 164 ft. (50 m.) wide.

CARGO HANDLING FACILITIES: There are fork lift trucks of all sizes, 6 mobile cranes at the floating pier, and some towing vehicles.

MEDICAL: Services available.

FRESH WATER: Not available.

FUEL: Available if advance notice is given. Fuel/diesel oil and lubricating oil can be obtained from either Amuay Bay or Punta Cardon.

FIRE PRECAUTIONS: This port is used for discharging general cargo, especially waste paper and timber. Waste paper is considered as dangerous cargo, therefore Masters are called to pay attention to their fire-fighting equipment and to have it ready during discharging waste paper.

WATCHMEN: Not available.

SHORE LEAVE: Permitted, but shore passes must be carried and passes returned before the vessel sails.

GENERAL: *Stores:* Provisions, deck and engine stores available but not bonded stores.

Garbage Disposal: No facilities.

JOSE TERMINAL: 10.06 N. 64.51 W.

OPERATOR: Corpoven S.A.

FLAG: Venezuelan flag must be displayed from the foremast when entering Pozuelos Bay and when manoeuvring or docking, regardless of the hour; however, while at anchor or while moored at berth, it needs to be displayed only between sunrise and sunset.

LOCATION: The Terminal of Jose is located West of Pozuelos Bay at: Lat. 10° 06′ 19″ N., Long. 64° 51′ 10″ W. on the N.E. coast of Venezuela. The usual hurricane path is several hundred miles to the North.

The lighthouse marking the entrance to Pozuelos Bay is located at: Lat. 10° 18′ 18″ N., Long. 64° 41′ 07″ W. Visibility is 20 miles.

DOCUMENTS: Arrival clearance is effected on board vessel shortly after docking by Government Officials and a representative of the Company. The following documents are required and should be prepared prior to arrival.

Ship's Register.
Ballast Manifest (1 copy).
Crew List (6 copies).
Passenger and Baggage List, if any (5 copies).
List of Passengers in Transit, if any (5 copies).
List of Personal Effects (4 copies).
*Store List (5 copies).
List of Slop Chests (4 copies).
Sailing Permit issued by Marine Authority at last port of call.

*Store List should indicate separately all deck, engine and cabin stores.

PILOTAGE: The use of Government pilots is compulsory for all vessels docking or undocking. This service will be arranged at all times. If it becomes mandatory for the Master of the vessel to disregard Pilot's order in order to ensure safety of the ship, a written report in Spanish shall be submitted promptly by the Master of the ship to the Government Port Captain.

APPROACHES: Puerto Jose is approached through a channel 150 m. wide, with a minimum depth of 13.6 m. There is a turning area 460 m. in diameter.

RESTRICTIONS: No restrictions are made on arrival/sailing time.

MAX. SIZE: The loading facilities consist of one Berth.

The docking characteristics are as follows:

Max. Deadweight	45,000 tons
Max. Ship Capacity	75,000 cu.m.
Min. Ship Capacity	11,000 cu.m.
Max. Draft	39 ft.
Max. LOA	800 ft.
Max. Lightship weight	22,000 tons

HEALTH: In theory the Government Port Doctor is to board each incoming vessel and board only outgoing vessels which carry passengers. In practice, however, the doctor boards at his discretion.

RADIO: Masters are requested to advise Corpoven Puerto La Cruz by radio 72 hours in advance of estimated arrival giving vessel's name, date and hour of arrival, bunkers, name of Master, port of departure, draft (arrival), Venezuelan gross tonnage, flag of ship and dates that ships' certificates expire. Vessels may contact the terminal of Puerto La Cruz by radio-telephone on 2182 kHz, SSB and VHF Channel 16. There is standby attention 24 hours a day. The terminal also has the frequencies 2080, 2120, 2638, 2738 and VHF Channels 6, 12, 13, 16, 17, 73 and 74.

Ship-to-shore radios are installed on the oil dock and on both tugs.

TUGS: There are 2 tugs at the port for mooring or unmooring and use is compulsory for all vessels. The tugs available are radio equipped and are 3,000 HP or more. Generally the Government Pilot will not begin manoeuvers until he is assured that the tugs are on stand-by.

BERTHING: *Arrival at Dock:* While alongside the berth the following rules must be observed:

(a) Master must ensure that mooring lines are properly tended, and that sufficient personnel are onboard at all times to handle lines. Loading will be temporarily suspended upon infringement of this regulation.

(b) Masters are requested to remove the blank flanges from their vessel's loading manifold before docking, so as to expedite the connecting of the shore loading arms by company personel. Vessels are requested to have their derrick and gangway ready for use.

NOTE: Vessels normally dock with starboard side to dock, unless advised otherwise.

(c) While docked, the discharge of sea water, hot water or steam on dockside of ship is prohibited. Hot water or steam may activate the automatic sprinkler system as well as damage piping located under the dock surface.

(d) Rat-guards must be placed on all ropes connected with the shore.

(e) Heavy exhaust smoke from vessel's funnel is not permitted. Any infringement of this rule will result in Government fine and/or removal of ship from dock.

(f) Meals must be provided in officer's messroom for Venezuelan National Guard personnel who may be assigned to the vessel during her stay in port.

(g) Masters are requested to display on top of mast a red flag in daytime and red light at night indicating that ship is handling dangerous cargo.

(h) Unregulated crafts should not be allowed to come alongside ship moored at Terminal without the permission of the Terminal Operator. It will be the responsibility of the ship's Master to ensure that this regulation is obeyed.

LOADING: *Products Handled:* Natural gas, propane, isobutane, normal butane and pentane.

Loading rates:

Propane	12,000 GPM
Butane	6,000 GPM
Gas/Pentane	4,150 GPM

Only one commodity handled at one time.

After the vessel has been cleared, the Company Dock Supervisor on watch will give the Master of the vessel written instructions with respect to the cargo.

During loading operations, company employees are on watch to administer to the needs of each vessel.

Upon termination of loading cargo, cargo lines are displaced at controlled rates prior to disconnecting.

Shortly after completion of loading, company personnel and an independent inspector, together with a vessel's officer, will take ship's ullages and later, deliver cargo and sailing papers to the Master of the vessel.

Ships must vacate berth upon completion of loading and await papers at anchorage in Pozuelos Bay.

For information regarding completion of loading, the dock supervisor can be contacted by telephone from telephone booth at berth.

BALLAST: There are no facilities for deballasting.

MEDICAL: All requests for medical or dental treatment must be accompanied by a written request from the Master to the vessel's Agent.

FRESH WATER: Not available locally.

Fresh chlorinated water is available in limited quantities at an average rate of approximately 2 tons per hour at the Puerto La Cruz Terminal.

FUEL: Bunkers are not available at this Terminal.

Bunker "C" and Heavy Diesel Fuel and a complete range of intermediate fuels are available in reasonable quantities at Puerto La Cruz Terminal, subject to safety and operational restrictions. Delivery rates to the ships are approximately as follows:

Bunker "C"	200 t.p.h.
Heavy Diesel	150 t.p.h.
Intermediate Fuels	100 t.p.h.

Meters are installed in all bunker systems and are calibrated in net barrels; except diesel meters which indicate gross barrels.

The dock valves on the bunker lines on the docks of Puerto La Cruz Terminal will only be opened and closed upon advice from the ship's personnel.

Lubricants and gasoil are available through the vessel's Agent.

CUSTOMS: Crew members should be warned against taking knives or other lethal weapons ashore, as this is strictly prohibited. All firearms and ammunition must be noted on stores list. They cannot exceed 1 per officer and 18 cartridges per gun. No arms may be carried while ship is in Venezuelan waters or tied up at dock. Contraband of any description will be confiscated. Each man is allowed 1 package of cigarettes on his person and this package must be opened. No liquor is to be taken ashore. It is prohibited to carry liquor from shore to ship without authorisation from Master of vessel. It is further strictly prohibited to consume liquor in dock area.

It is normally forbidden to take photographic cameras ashore. However, upon written request to the National Guard contingent on the oil dock, special permission may be obtained. This is subject to 2 limitations: (1) that the camera is returned to the ship; (2) that no photographs are taken of the petroleum installations.

IDENTITY CARDS: Passes for shore leave are issued by the officials of the "Capitania de Puerto", who board with the Customs Authorities upon the vessel's arrival at dock. These passes are valid for the duration of the vessel's stay in port and must be returned before sailing to the guard assigned to the vessel.

In order to comply with Immigration Regulations, crews should be carefully checked before sailing, and any missing seamen reported to the vessel's Agent.

Crew members left behind when the vessel sails will be held in custody until deported at the vessel's expense.

CONSULS: The following foreign countries have consular offices in the vicinity of Puerto La Cruz:

Belgium
Brazil
Colombia
Denmark
France
Great Britain
Italy
Netherlands
Norway
Spain
Sweden

Vessel's Agent should be appraised of vessel's consular requirements promptly upon docking.

REPATRIATION: Seamen discharged from hospital for transfer to another port, seamen arriving from another port or those being repatriated are handled by the vessel's Agent, who must comply with all Venezuelan Regulations.

In the case of seamen left ashore for any reason, Masters are requested to furnish a letter accepting responsibility for all expenses incurred, advances if any, and instructions for repatriation. Venezuelan regulations, at all times hold the vessel responsible for a seaman during his stay in the country. Close contact is maintained by radio with ship owners regarding disposition of their seamen.

TIME: GMT minus 4 hours all year round.

TONNAGE CERTIFICATE: Due to reciprocal agreements between Venezuela and the following countries, ships flying the flag of any of the below-named countries are exempted from Arqueo compliance and payment of fees: Denmark, Great Britain, France, Germany F.R., Netherlands, Norway, Portugal, Sweden, United States.

Ships bearing the flag of any other nation shall require a Venezuelan Arqueo Certificate. The cost of measuring is contingent on the size and tonnage of vessel. The certificate is usually issued after the ship sails from port. It is then sent to the marine department of the Owners of the vessel by airmail.

EMERGENCY CO-ORDINATION CENTRE: Seccion de Seguridad, Busqueda y Salvamento Maritimo. Telex: 31154. Tel: (02) 513395, 512156.

REGULATIONS: *Excessive Smoke:* It is absolutely prohibited to exhaust heavy smoke through a ship's funnel while tied up at the Company's dock. It is also prohibited to blow boiler tubes. Failure to comply with this regulation will result in any or all of the following actions:

1. The loading operation will be immediately shut down.
2. Vessel will be subject to fine.
3. Vessel may be removed from dock.
4. Ship's Agent will be advised of infractions of this regulation.
5. Fines, time lost, and other related expenses will be charged against the vessel.

Pollution: Venezuelan laws are very strict on this subject and local authorities quickly enforce existing statutes. For this reason each Master is handed a circular that emphasises the necessity of complying with federal and local laws and customs.

The spilling or discharge of dirty ballast, crude oil or petroleum products into coastal waters is defined as pollution, as is also the throwing overboard of garbage, trash or other unwanted objects while the vessel is at anchor or dockside. Prior to the start of loading operations all discharge valves, bilges and scuppers must be closed and strict vigilance exercised during deballasting and loading operations.

When a spill does occur, the Master, Government officials and a company representative evaluate the quantity and submit a report to the Government Petroleum Inspector. This report becomes the basis for a federal fine that is practically incontestable. An additional expense occurs when local authorities require assistance in cleaning beaches and shorelines after a major spill and can pinpoint the responsible vessel or source.

SURVEYORS: 1. Saybolt, Caleb Brett, Chass Martin, Aivepet cargo inspectors available at Puerto La Cruz.

2. Lloyd's Register, American Bureau, Bureau Veritas, P & I available at Puerto La Cruz or from Caracas via the ship's agent.

TELEPHONES: There is a telephone booth on dock. The supervisor on duty may be contacted at any time.

GENERAL: *Dockmaster's Office:* Loading and marine personnel offices of Corpoven S.A. are located at the entrance of the dock. Any matter concerning loading and/or bunkering, is handled through this office, which is open 24 hours every day.

The Documentation Section is located at the Puerto La Cruz Terminal.

On the dock there is a telephone booth and the supervisor on duty can be contacted at any time.

Cash: The local currency is the "Bolivar". Foreign exchange may be secured from local banks. Local banks are open Monday to Friday 0830 – 1130 hrs. from 1400 – 1630 hrs. except holidays.

Ship's Requirements: All ship requirements such as chandlery supplies, mail, cash advances, medical attention, dental care, consular services, repair work, laundry service, bonded stores, transportation, etc., should be obtained through the vessel's Agent.

No charts or sailing books are available in the Terminal. These should be forwarded by airmail to the vessel's Agent for delivery to the ship.

Movement of Passengers: Inasmuch as the Company's Terminal is not a public port, only bona fide crew members and Corpoven employees are permitted to join or leave ship in Jose.

AGENCY: All incoming ships to lift cargoes at this Terminal must have a local Agent to render all services required for a prompt and efficient tanker turnaround and to cancel all ships disbursements during the port stay.

Corpoven as operator of the Terminal charges afixed fee for General Services such as:

Complete documentation service.

Preparation of disbursement accounts for the Agent of Vessel.

Dispatch of vessel.

Control over marine units which service vessel.

Assistance and supervision in docking of vessel Supervision over connecting of loading system and related cargo facilities.

Offices of Corpoven loading and marine personnel are located on the first floor of the building between berths Nos. 1 and 2. Any matter concerning loading, bunkering, is handled through this office, which is open 24 hours of every day. On the ground floor of this same building is the Documentation Section.

LA GUAIRA: 10.36 N. 66.56 W. (See Plan)

PORT LIMITS: Between the points 10° 37′ 40″ N., 66° 48′ 30″ W. and 10° 37′ 40″ N., 67° 07′ 07″ W. and the coast line.

DOCUMENTS:

Sealed envelopes for Customs.
Visaed B/L and Sobordos not in envelopes.
Despatch from last Venezuelan port, if any, or
Zarpe from last foreign port, if arriving directly from abroad.
Fumigation Certificate.
Bill of Health.
Vaccination Certificates of Crew.
4 Store Lists (with arms and narcotics).
4 Lists of Personal Effects.
6 Crew Lists.
12 Lists of Passengers for La Guaira, or negative Passenger List.
8 Lists of Passengers in Transit.
2 Lists of Luggage (only for passenger luggage).
1 Master's Declaration.
1 List of Vagrants, if any.
8 Cargo Lists.

HEALTH: Ships from Venezuelan ports obtain Free Pratique. Ships from abroad must send a cable to Health Authorities requesting Free Pratique, or advising illness.

PILOTAGE: Compulsory and vessels have to wait for Pilot in the pilotage zone N.W. of the entrance. Ships can make contact with the pilot station by VHF Channel 16 or 12.

ANCHORAGES: Generally ships must anchor in the N.E. area of the entrance, the depth varies from 8 to 20 fathoms. The bottom is sand and occasionally rocks.

RESTRICTIONS: There are no restrictions imposed upon entry.

MAX. SIZE:

Berth	*Length (m.)*	*Depth (m.)*	*Remarks*
01-E	176	10.95	Roll-on/Roll-off
01-D	176	10.95	General Cargo
01-C	176	9.55	12 ton electrical cranes
01-B	176	8.55	12 ton electrical cranes
01-A	176	8.80	12 ton electrical cranes
01	155	9.15	12 ton electrical cranes
02	155	9.75	12 ton electrical cranes
03	160	9.45	Grain Berth
04	136	5.50	General Cargo
05	161	8.50	General Cargo
06	161	8.80	General Cargo
07	136	8.50	General Cargo
08	136	8.50	General Cargo
09	133	5.50	General Cargo
10	168	8.50	6 ton electrical cranes
11	144	8.80	6 ton electrical cranes
12	144	8.50	6 ton electrical cranes
13	144	9.45	6 ton electrical cranes
14	144	8.80	6 ton electrical cranes
15	168	8.80	6 ton electrical cranes
16	160	8.20	Passenger Berth
17	160	9.15	Passenger Berth
18	171	9.75	Passenger Berth
19	171	9.75	Passenger Berth
19-A	72	4.55	Passenger Berth
20	150	3.00	Fishing Berth
21	290	6.10	Warship Berth

RADIO: In order to enable Agents arrange for quick entry and berthing, Masters should give their ETA message at following intervals, via Curacao Radio (ITT): 72, 48 and 24 hours prior to arrival, indicating in the 48-hour message, the quantity of parcels (or tonnage if bulk cargo) per hatch. This is imperative for applying for the necessary personnel of the Instituto Nacional de Puerto (I.N.P.). Also, draft, passengers, requirements for bunkers, fresh water, provisions, repairs, medical assistance, etc. This telegram the Master to sign with his full name.

VHF: Communication with the Port Authorities and the pilot station are possible by VHF. Ship must make contact on Channel 16 and change after to some Channel between 1 and 70, Channel 12 is normally used for this manoeuvre.

TUGS: The use of tugboats within the port is compulsory, both for entering and leaving port, as well as for manoeuvres in the port area. Ships longer than 139 m. must be assisted by 2 tugboats.

Ship's lines are used in the manoeuvre. The Port of La Guaira has 2 tugboats of 1,800 h.p. each. Normally they join the vessel at the entrance of the port.

BERTHING: Normally a minimum of 24 ocean-going vessels can berth at one time. Berth Nos. 01-E, 01-D, 01-C, 01-B, 01-A, 01, 02 and 03 are along the breakwater pier East-West, parallel to the coast. At piers Nos. 01-C, 01-B, 01-A, there are 12 electrical cranes of 12 tons. At pier No. 03 ships discharge grain directly to a silo by 2 grain towers, average daily rate 2,000 tons. Silo capacity 12,000 tons.

Within the port is a finger pier, parallel to the breakwater pier, with 2 Customs warehouses alongside, with berths North and South, 2 each. The main pier is parallel to the coastline, East-West, with berths Nos. 10, 11, 12, 13, 14 and 15,, along which piers there is ample Customs warehouse space, including outdoor space on the roofs as well as ample uncovered storage area. There are 15 × 6 ton electrical cranes at this pier.

The Passenger Terminal is on a finger pier, in direction North-East with its land end in the corner of berth No. 15. There are 2 berths each side, namely Nos. 16 and 17 in the inner basin and Nos. 18 and 19 in the outer basin.

Passenger vessels have priority for berthing and they have to leave port within 24 hours.

BULK CARGO FACILITIES: Bulk carriers only discharge, at piers 01-D, 01-C and 03. There are no facilities for cargo.

SPECIALISED CARGO HANDLING FACILITIES: The only berth specially equipped for Roll-on/Roll-off traffic is pier 01-E but pier Nos. 04, 09 and 16 are also used for this kind of cargo.

There is no fixed equipment for handling containers but the Instituto Nacional de Puerto has some mechanical equipment for handling containers.

This port does not have any other facilities for specialised cargo handling.

BRIDGES: There are no bridges.

STEVEDORES: Supplied exclusively by Instituto Nacional de Puerto at costs per weight of cargo in accordance with governmental decrees.

The Port Agent applies for the necessary number of gangs per ship. Each gang consists of 11 stevedoremen (estiba) and 11 longshoremen (caleta).

Switching of gangs from one hatch to another is not permitted.

There are no longshoremen costs for cargo handled during straight time, but only for that handled during overtime.

(a) *Straight time*

Monday – Friday	0700 – 1100 hrs.
	1230 – 1630 hrs.
Saturday	0700 – 1200 hrs.

(b) *Overtime*

Monday – Friday	1800 – 2300 hrs.

(c) *Saturday afternoon* work is not permitted, but if a vessel could terminate operation and sail within a maximum of 3 additional working hours, a special permit would be granted by Customs and Port Authorities. In such a case, the additional working hours are considered as overtime.

(d) *Work on Sunday* is not permitted except for passenger vessels (officially those carrying 69 passengers, but exceptionally vessels with fewer passengers might occasionally obtain same consideration by authorities).

EQUIPMENT:

(a) *Electric Shore Cranes:* Berths 01-C to 01-A have 12 electrical cranes on rails of 12 tons capacity each. Berths 10 to 15 have 15 on rails of 6 tons capacity each. The Instituto Nacional de Puerto allow 2 × 12 tons cranes to lift pieces up to 20 tons or 9 tons weight. At pier 10 the arms of the cranes reach the roofing of the warehouses. Use of shore cranes is not compulsory, unless the Technical Board of the Instituto Nacional de Puerto rules to use them. Other piers have no shore cranes.

(b) *Diesel-Driven Rolling Cranes:* There are a considerable number of these cranes which can lift heavy pieces of about 17 tons.

(c) *Floating Cranes:* Not available.

(d) Special lumber carriers of about 20 tons capacity.

(e) Tow trucks, fork-lifts, trucks and trailers up to 10 tons capacity.

LOADING/DISCHARGING: Cargo is discharged on the pier, when free it is taken away by fork-lifts and/or other mechanical equipment supplied by Instituto Nacional de Puerto. The use of such equipment is included in the handling fee for weight.

There are 2 grain towers on berth No. 3 leading via conveyor belts to storage silos of 12,000 tons capacity. Average daily discharge rate 2,000 tons approximately.

At berth Nos. 10 to 15 discharge to the roof of the warehouse or on the pier is possible.

OPENING/CLOSING HATCHES: Not performed by the Instituto Nacional de Puertos but by either the ship's crew, or the assistance labour of the Agent.

FRESH WATER: Available through pipe-line on the pier, day or night, by water trucks of up to 10 tons capacity in day time only.

GANGWAY/DECK WATCHMEN: The watchmen service is not necessary. It is recommended to use a seaman as watchman.

MEDICAL: There are several hospitals in the town and all the medical attention necessary. Should medical assistance be needed on board, contact the Agent.

DENSITY: The average salinity of water in the port is 1.025.

CONSULS: The following countries have consuls in La Guaira; Belgium, Germany F.R., Mexico, Norway, Panama and Sweden. The following countries have Vice-consulates; Denmark, Italy, Portugal and Spain.

REPAIRS: All kinds of deck and engine repairs are possible.

DRY DOCKS: There are no dry docks in this port. (The nearest is at Puerto Cabello).

SURVEYORS: All Classification Societies and P&I Clubs are represented in the port.

POLICE/AMBULANCE/FIRE: *Police:* 26148, 26347 and 27098. *Ambulance:* 22165. *Fire:* 22165 and 22587.

REPATRIATION: There are all kinds of facilities for making crew changes and arranging any necessary repatriation.

AIRPORT: The distance to the International Airport at Maiquetia is 10 km., this is served by different regular airlines.

TIME: GMT minus 4 hours. No change.

HOLIDAYS: January 1st, (New Year); February 18th/19th, (Carnival); April 3rd/4th (Easter); April 19th, (Independence Day); May 1st, (Labour Day); June 24th, (Carabobo Battle); July 5th, (Independence Day Declaration); July 24th, (Simon Bolivar's Birthday); September 4th, (Public Funcionary Day); October 12th, (America Discovery); December 25th, (Christmas).

TELEPHONES: It is not possible to place telephones on board, however calls can be made in the "CANTV" office.

SERVICES: There are no special services available. Radar repairs possible.

SHORE LEAVE: Crew members can go ashore with shore passes issued by the Port Authorities.

IDENTIFICATION: Shore passes are sufficient to go ashore.

REGULATIONS: *Dangerous Goods:*

1. Dangerous goods should be discharged directly to trucks.
2. When goods are grain or powder in bags, these should not exceed 50 kg.
3. Cargo with damaged packing will not be discharged and it should be repacked on board.
4. Cargo should be duly identified and with their dangerous goods labels.
5. Cleaning of the piers after loading or unloading should be done by the importer or exporter, otherwise they should cover the expenses if the INP has to do this cleaning.

OFFICIALS: Once the vessel is anchored at La Guaira, Representatives of Customs, Port Captain, National Guard, Health Service, Immigration and Agency board the vessel.

DEVELOPMENTS: Increase in draft to 35 ft. expected.

AUTHORITY: Harbour Master, Capitania de Puerto, Terminal de Pasajeros de La Guaira.

AGENT: Head Office (Control), Management/Brokers, Chartering and Tramp Agents, Victor H. Selinger S.A., P.O.Box 1632, Caracas 1010-A. Cables: "Selvic" or "Seltank" Tel: (02) 81.02.71, Telex: 21402, 21934, 22859, 21631. Local Office: P.O.Box 304, La Guaira. Tel: (031) 27092, 27566, 27340. Cables: "Selvic LaGuaira" or "Seltank LaGuaira". Telex: 31143.

GENERAL: The following "Depth Bulletin", dated June 1978, was received from a Shipmaster in February 1979.

REPUBLIC OF VENEZUELA
NATIONAL INSTITUTE OF CANALIZATIONS
ZULIA ZONE

Depth Bulletin No. BP – 6-78 Dated: 13-06-78

The following data represents the latest information reported and refer to the date shown for each section of the channel. Depths are expressed in metres and are related to the same level of the local Navigation Charts 1001, 1002, 1003 and 1004 of the M.M.M. Mean Monthly Lowest Low Water.

The controlling depths refer to the centre area of the channel demarked by parallel lines on either side at a distance of 60 m. in the outer channel and 45 m. in the rest of the channel. The Puerto Miranda Channel is of 30 m. The theoretical position of the buoys in the aforementioned navigation charts are located at a distance of 30 m. from the edge of the channel.

Main Channel

Channel	*From*	*To*	*Date*	*Depth (m.)*	*Remarks*
Outer Section	B – 1	B – 28	19-05-78	12.8	
Inner Section	B – 28	T – 56	10-05-78	12.8	
SOUTH PROLONGATION	T – 56	B – 59	28-04-78	12.8	Entrance to Puerto Miranda (B – 59)
	B – 59	B – 66	26-04-78	12.8	Entrance to La Estacada (B – 66)
	B – 66	B – 76	10-03-78	12.8	Entrance to the Port of Maracaibo
	B – 76	B – 86	24-05-78	13.1	Entrance to Bajo Grande (B – 86)
	B – 86	B – 96	07-02-78	13.1	Entrance to La Ensenada
	B – 96	Parallel 10° 22′ N	14-02-78	12.8	Entrance to La Salina Channel (B – 97 and 10° 22′ N)
	Parallel 10° 22′ N	M – 1	14-02-78	13.1	Entrance to Lake Main Channel (M – 1 and M – 1)
Puerto Miranda Channel		AP – 2	11-05-78	11.6	

Signed............................ *Signed*............................
The Port Captain The Director N.I. of Can.
Zulia Zone

(N.B. Certain information common to all Vessels entering Maracaibo Lake is given below. For specific details of ports/terminals within the Lake, see relative Section as indicated above).

FLAG: Local authorities require that the Venezuelan ensign be flown at vessel's masthead, from the time of entering the outer channel until clear of the outer channel outbound.

DOCUMENTS: *(a) Inward Clearance for Scheduled Vessels:* Vessels arriving in ballast or with cargo in transit require following documents:

1 copy Sailing Permit from Last Port.
2 copies Ballast Certificate.
4 copies Passenger Lists.
4 copies Baggage Lists.
4 copies List of Passengers in Transit.
4 copies List of Slop Chest.
4 copies List of Personal Effects.
4 copies Store Lists.
5 copies Crew Lists.

Vessels arriving with cargo should have, in addition to the foregoing:

4 copies Sobordos (Venezuelan Inward Manifests).
6 copies Bill of Lading.
2 copies Inward Manifests.

(b) Inward Clearance for Diverted Vessels: Vessels diverted to Maracaibo Lake Ports to load cargo, should submit all documents indicated above, except consular mail, which they will not have.

Vessels diverted at sea to Maracaibo Lake Ports which do not have a Venezuelan clearance on board, must advise loading port via radio to arrival, the name of vessel, Master's name, vessel's flag, Venezuelan net tonnage (if available, if not, the registered net tonnage), last port of call, destination port for which originally cleared, ETA San Carlos Pilot station and grade and quantity of cargo to be lifted. This information is required in order that Inward Clearance may be arranged with government officials in ample time prior to vessel's arrival. Also 3 copies of the diversion telegram received by vessel and signed by Master, together with copies of those documents listed under *(a)* should be presented to the Port Authorities upon arrival at Maracaibo. In the absence of this information, or of presentation of each of these documents to the Port Authorities the vessel will be subject to a fine. Please note, that the documents covered under *(a)* have to be presented upon arrival, regardless, if the vessel is not arriving with consular clearance or arriving after being diverted at sea.

(c) In Maracaibo 2 clearances from Custom's authorities are needed: One for proceeding from Maracaibo to loading berth, and another after loading for proceeding from Maracaibo to destination. For this reason Custom Dispatch charges may be incurred twice.

(d) American Crew List. All non-American vessels loading for a U.S.A. port should have the American Crew List ready on arrival in Maracaibo to be visaed by the American Consulate in Maracaibo and placed aboard ship before departure. The crew list should be prepared on Immigration and Naturalization Service form No. I. – 418 (Crew List Manifest) and should contain 2 sections:

Section 1 should list those crew members who are American or who possess individual visa documentation to the United States.

Section 2 should list, in the alphabetical order of their last names, those alien crew men who lack United States visa documentation and therefore require inclusion in the visa of the crew list.

Only one name may be placed on each line of the crew list. Two names should not be placed in the space of one line, nor should a full line between two names be left vacant. All copies of the crew list presented must be legible. Occasionally the names of the crew men included on the carbon copies of some crew lists presented at the consulate are blurred beyond recognition.

The information requested under columns 1, 2 and 3 should be filled in completely. Column 1 should always contain the complete first name and middle initial of the crew man. Column 2 should show the nationality of each crew member and the number of his travel Document. Column 3 should always include the name of the port where the crew man was shipped, not simply the country.

At the time of vessel's first application for a crew list, the crew list must be presented in four copies: Original and 1 copy should contain only information requested under Columns 1, 2 and 3. 2 copies must include following information of those crew men to be included on crew list visa. Column 4 should list date, city and country of each crew man's birth. Column 5 should show place of issuance of seaman's travel document and name of Government which issued travel document. (It is not necessary to list date of issuance of travel document).

Below is a sample line correctly entered on the Master crew list.

(1)	(2)	(3)	(4)	(5)
Bello, Tomas E.	Z.23455 Venezuelan	Maracaibo Venezuela	December 8, 33 Caracas, Venez.	Cabimas, Venez

Upon subsequent crew list applications by same vessel within same year, the crew list need be presented in duplicate only, and the information in Columns 4 and 5 need be provided only concerning any new crew members who require visa documentation. When twelve months have elapsed since presentation of Original crew list, a crew list should again be prepared in 4 copies and should contain all the information required in columns 1 – 5. Such a Master crew list is required after each 12 months' period.

APPROACHES: Also see "General" above. The channels leading to the Lake of Maracaibo are called the Outer Channel, the Inner Channel and the Lake Channel. The controlling depths of the Outer Channel, Inner Channel and the channel Southward to buoys M1 and M2 are normally 45 ft. At certain times the controlling depth may be less. At such times suitable notices are published advising mariners of these temporary reductions of controlling depth.

Outer Channel. The Outer Channel starts at the E.M. Buoy in position 11° 13′ 47″ North and 71° 33′ 31″ West. The light characteristics of E.M. Buoy are: flashing white every 5 seconds, visibility approximately 5 miles. The distance from E.M. buoy to the Southern end of the Outer Channel, marked by buoys B – 27 and B – 28, is approximately 15.75 miles. The channel is 1,000 ft. wide and has a normal controlling depth of 42 ft. minimum monthly observed lowest water (MMOLW) with tidal range varying about 2 ft. 3 in. This depth is maintained by periodical dredging. Tankers are required to have a keel clearance of at least 2 ft. and dry-cargo vessels a keel clearance of at least 3 ft. Vessels navigating the channel at the maximum allowable draft are confined from 2 hours before to 2 hours after high water. There are no turns in the channel and the course is 189°.

There is a breakwater 0.5 mile East of, and parallel to, the Outer Channel and extending 1.6 miles Northward from the North side of Zapara Island. The end of this breakwater is marked with a skeleton steel tower with a light 27 ft. above sea-level. Light characteristics – flashing white light every 8 seconds; visibility about 3 miles.

On Zapara Island there is a skeleton iron tower with a height of 136 ft. above sea-level.

Cross currents are sometimes encountered near Zapara, San Carlos and Pescadero Islands, especially at low water when the cross currents are strong. Overtaking at these points should be avoided.

There is one anchorage zone in the Outer Channel which is a trapezoid on the port side when navigating inbound near the Buoys B – 14, B – 15, B – 16 and B – 18. All buoys in the Outer Channel are equipped with radar reflectors.

Caution: Masters are warned to keep adequate speed in the Outer Channel even when embarking the Pilot as strong cross currents are encountered near San Carlos and Zapara Island. Pilot boats are fast and fitted with a flying bridge.

Inner Channel. The Inner Channel continues on the same course as the Outer Channel for about 10 miles, whereafter the direction changes to 150°. Entire length of the Inner Channel is about 12 miles.

The beginning of the Inner Dredged Channel is marked by buoys B – 29 and B – 30. Channel is marked by beacons, and terminates at beacons T – 55 and T – 56. The channel is 800 ft. wide and the normal controlling depth is 43 ft. MMOLW with tidal range varying from 1.5 ft. to 2.5 ft.

The channel from beacons T – 56 to Maracaibo Harbour is a dredged channel, the end of which is marked by buoys Nos. B – 73 and B – 74.

About 0.2 mile South of buoys B – 29 and B – 30, there are located 2 towers – 1 on each side of the channel, and about 1 mile further South are 2 more towers. These 4 towers are marked E – 31 and E – 32 (North) and E – 33 and E – 34 (South). Towers No. E – 31 and E – 32 are of single steel pipe construction on a concrete pile base. Towers No. E – 33 and E – 34 are of skeleton steel construction (former oil-well derricks) each mounted on 4 concrete piles. The characteristics of these towers are:

Tower No.	*Height above LWS (ft.)*	*Light*
E – 31	43	Green – Fl.
E – 32	43	Red – Fl.
E – 33	123	Green – Fl.
E – 34	128	Red – Fl.

Vessels are not allowed to overtake each other in the Inner Channel between buoys B – 29 and B – 30 and light beacons T – 25 and T – 26. Vessels may overtake each other in the Inner Channel between light beacons T – 39 and T – 40 after having exchanged prescribed signals with the vessels to be passed. This manoeuvre is, of course, allowed only if conditions are favourable and no vessel navigating in the opposite direction is in sight.

Lake Channel. The channel starting at light beacons T – 39 and T – 40 and leading to Maracaibo Roads is called the Lake Channel. This is a natural channel 3,000 ft. wide and 11 miles long.

The Main Channel through Maracaibo Lake is approximately 83 miles long, not less than 244 m. wide and with a greater depth than the outer channels.

The access channels to the various ports and terminals branch off from the main channel as described under Section for each port.

CHANNEL NAVIGATION:

(a) Inbound vessels leave to starboard side the buoys and beacons marked with even numbers and to port side the buoys and beacons marked with odd numbers.

(b) Outbound vessels shall leave to port side the buoys and beacons marked with even numbers and to starboard side the buoys and beacons marked with odd numbers.

(c) Vessels should pass as close as possible to the channel's edge on starboard side. Loaded vessels have preference.

(d) Approaching vessels are to reduce speed in order to minimise the suction force of the displacing waters.

(e) Vessels must maintain a distance of 5 ship's lengths by day and 8 ship's lengths by night from other vessels navigating in the same direction.

(f) No vessel should start to manoeuvre to overtake another vessel before having received clearly the affirmative signal from the ship to be passed.

(g) A grounded vessel is not allowed to start any manoeuvre when another vessel is passing.

(h) Dredgers are frequently at work in the channels and caution should be exercised in passing them. Signals used by the dredgers are as follows:

Daytime

Black cylinder hoisted on side of yardarm: You can overtake me on the side on which the cylinder is shown.

Two black balls over the bridge: The channel is blocked.

Night

Green light on side of yardarm (a white light on mast-head helps to show on which side the green light is placed): You can overtake me on the side on which the green light is shown.

2 red lights over the bridge: The channel is blocked.

The tidal range is 4 ft. at neaps.

(i) Maximum speed for vessels navigating in lake channels has been limited to 10 knots. Masters should exercise the utmost care in complying with this regulation as heavy fines may be imposed to offending vessels.

PILOTAGE: (N.B. Maracaibo Pilotage Regulations require that inbound tankers, in ballast, while crossing the Bar, shall not have greater than 8 ft. difference between fore and aft draft. The Government Pilot will not take the vessel if this requirement is not met, unless he is satisfied that the actual draft of the vessel will permit safe navigation through the Outer and Inner Channels).

Every Master of a vessel navigating in Lake Maracaibo who desires to enter the main ship channel in Pilotage Zones No. 1 or No. 2 must first ensure that said Channel is free of traffic.

The limits of the Main Ship Channel in Pilotage Zone No. 1 are from buoys B1/B2 located at the entrance to the Outer Bar Channel and buoys B73/B74, of the city of Maracaibo. Pilotage Zone No. 2 begins approximately 1 mile below Maracaibo and extends Southward to lightfloats M36/M37. All other channels are considered as access channels to their respective port zones and subject to special local rules. Every vessel navigating to or from any port in Lake Maracaibo must follow the prescribed routes through the main and access channels leading to or from such ports, (unless special permission has been granted to do otherwise).

(a) Pilots are employees of the Venezuelan Government and act in an advisory capacity; the Master retains responsibility for the ship at all times. In the event it becomes necessary to disregard the Pilot's instructions in order to ensure the safety of the ship, the Master must prepare a full written report of the circumstances, for delivery to the Captain of the port.

(b) Inbound vessels have the option at present to embark government Pilot at the following areas:

- *(i)* In the channel off San Carlos Pilot Station between buoys B – 24 and B – 26.
- *(ii)* Anchorage area approximately 5.5 miles N.E. of Pilot station, San Carlos Island. Position 11° 04′ 22″ N., 71° 33′ 48″ W. East of buoy B – 17. This area is demarcated with green light buoy equipment with radar reflector.

(iii) At the E.M. Buoy.

(iv) At Punta Cardon. See "Note" and "Shipmasters' Reports" – August 1979, July 1981 and August 1981.

(c) The Port Captaincy of Maracaibo is unable to guarantee embarking or disembarking Pilots at the E.M. buoy or at anchorage area position. For this reason Masters should communicate with San Carlos Pilot Station for necessary instructions as to where to pick up Pilot, who usually embarks between buoys B – 24 and B – 26. The communication system between San Carlos Pilot Station and vessels will be by Morse lamp and radio-telephone. The stand-by frequency at San Carlos is 2182 kHz. Other existing frequencies are 2120 kHz and 2080 kHz; 156.6 and 156.8 MHz. Each pilot launch has a radio-telephone with 2182 kHz. frequency. The launch that leaves San Carlos Pilot Station with Pilot for ship, takes approximately 20 to 30 minutes to cover distance, and distance between buoys and San Carlos is approximately 6 miles or 10 km.

(d) Pilot Permit to navigate the Outer Channel without aid of a Government Pilot will be granted to those Masters who desire to obtain same. In order to fill the application required, a blank sealed paper and 3 copies should be signed by Master on arrival. Copy of this solicitude duly endorsed by Port Captain of Maracaibo, will serve the Master as temporary permit until the official one has been received. Masters in possession of permits to cross the Outer Channel without a Pilot, have the option to enter channel either at the E.M. buoy or between any other buoy, taking into consideration the heavy traffic of the channel. Government pilotage through the Inner Channel is compulsory at all times.

(e) Outbound vessels will receive Pilot in Maracaibo, who will Pilot vessel up to San Carlos area approximately between Towers E – 31 and E – 33, where he will disembark. The Port Captain of Maracaibo has instructed that all Masters should always in ample time identify themselves with the San Carlos Pilot Station by radio-telephone regardless of time of day. While inbound – between buoys B – 17 and B – 19 and sailing outbound – between markers T – 42 and T – 40. These instructions are obligatory and are required in order for the Pilot service to be aware, at any moment, of any emergencies which may arise, and also to avoid, especially during the night, the launch departing with an official Pilot aboard believing that the ship in sight needs his services, in which case, even though the launch or Pilot services are not rendered, the same will be charged to the company owning the ship, or its representative.

Note: A Master approaching the port for the first time must pick up a Pilot in Punta Cardon before entering Maracaibo Lake Channel. In the case of contravention the vessel will be intercepted by San Carlos Pilot Station and returned to Punta Cardon with a resulting loss of at least 1 day and the Master may also run the risk of a possible fine.

Furthermore, the Master should cable ETA via Curacao Radio 72, 48 and 24 hours before arrival in order to allow sufficient time for Agents at Maracaibo to send a Pilot to Punta Cardon.

TONNAGE: Venezuelan Port Authorities base part of their pilotage charges on the size of the vessel, i.e.:

(a) On Registered Net Tonnage. Venezuela will accept the tonnage of ships registered in countries with which they have a reciprocal tonnage agreement. As of this date, such countries are:

Denmark
France
Germany F.R.
Great Britain
Ireland
Netherlands
Norway
Portugal
Sweden
U.S.A.

(b) On Venezuelan Nett Tonnage. Ships not registered in countries listed above, when calling at Venezuelan ports for the first time, must be measured for Venezuelan tonnage by the Captain of the Port. It is the usual practice to take ashore the ship's Panama Canal or Suez Canal Certificate, which is used as a basis for recalculating tonnage under the Venezuelan regulations, and return it before sailing. The Venezuelan admeasurement certificate, when later issued, is forwarded to the Owners. A fee is charged for this certificate, which is payable only on the ship's first call.

(c) In practice, the procedure for stating the tonnage of all ships entering the Lake of Maracaibo is as follows: The inward Pilot boarding the ship presents Master a form on which among others the Master should fill in the tonnage of ship. Pilotage charges are based on this tonnage given by the Master. Master's attention is drawn to the fact that the Venezuelan nett tonnage is usually higher than the International nett tonnage. Care should be taken if an old Venezuelan nett tonnage certificate is on board, because the country in which the ship is registered might later have signed the reciprocal tonnage agreement with Venezuela. If the pilotage charges are made on basis of a higher tonnage than the one that should be applied, it is later very difficult, if not impossible, to get a refund.

CONSULS: The following nations maintain consular representative in Maracaibo:

Belgium
Chile
Colombia
Costa Rica
Denmark
Ecuador
El Salvador
France
Germany F.R.
Great Britain
Guatemala
Italy
Netherlands
Nicaragua
Norway
Panama
Peru
Portugal
Spain
Sweden
Switzerland
United States
of America

CUSTOMS: *(a) Customs Watch.* While vessel is in port, Venezuelan National Guard Officials are assigned on board to ensure compliance with customs regulations. The Law requires meals be supplied to these officials during regular meal hours. Masters are requested to give them the privilege of eating in officers' messroom, to avoid difficulties.

(b) Firearms and Ammunition. Firearms must not exceed one per officer nor may the ammunition exceed 18 cartridges per officer. All firearms and ammunition must be carefully declared on Store List and should be collected and held in Master's safe custody while vessel is in Venezuelan waters.

(c) Contraband. Strict compliance with the Customs law of the country is enforced by the authorities, and Masters are strongly advised to caution crew members against attempting to smuggle cigarettes. 1 open package per person is allowed to be carried ashore, but greater quantity will result in fine and imprisonment of the offender as well as lost ship's time. Due to very strict enforcement of the Customs regulations, it is recommended that no goods be carried which are not shown on Store List. Any new articles (clothes, shoes, etc.) should be included in Store List and marked as personal belongings. If during a check-up by Customs, articles considered as contraband are found, this will not only mean confiscation of these articles, but also hours or days of lost ship's time, while the case is handled at court.

TIME: Local time is GMT minus 4 hours.

VISITORS: All visitors to ships are prohibited except those company employees, petroleum inspectors, etc., whose duties require their presence aboard.

PASSENGERS: Passengers will not be permitted to disembark unless in possession of the required visa and documents. To facilitate clearance, if passengers are carried, the Master should include advice to this effect in his radio ETA.

POLLUTION: The Laws of Venezuela are very strict in regard to the pollution of harbour and coastal waters by oil, and heavy fines are imposed for violations. No dirty ballast, oil or bilge slops are to be pumped or allowed to escape overboard. All overboard discharge valves from cargo tanks and bilges are to be secured before loading or discharging commences. Loading is to be conducted with greatest care and vigilance in order that errors or delays in handling cargo valves may not result in overflows. All deck scuppers should be plugged before loading to avoid harbour contamination should an overflow occur. The Authorities require a written report to be submitted by the ship involved in the event of an oil spill.

SEAMAN LEFT BEHIND: Sailing may be withheld until all crew members are aboard with exception of those ashore for justified reasons. It is important that Masters bear in mind that the Venezuelan Law will at all times hold the vessel's Master, Agent, or Owner responsible for any seamen left behind in Venezuela.

SHIPMASTER'S REPORT: August 1979.
MARACAIBO/EL TABLAZO AND APPROACHES

Approaches: If making for the "EM" buoy direct, positions can be a bit vague due to the low lying coast.

A distance off the coast can be obtained before the "EM" buoy but no real firm position.

Often there is a strong N.E. wind.

Pilot: In the 'Pilot Book', etc., mention is made of picking up the Pilot at Punta Cardon.

From the Pilots and Agent I have a clearer idea of the official viewpoint and requirements.

There is NO compulsion to take a Pilot before San Carlos.

If you are unsure of the area and the visibility is poor from all sources and in my personal viewpoint it is advisable to take a Pilot at Punta Cardon, giving ETA 12 hours in advance.

If vessel is to pick Pilot up at San Carlos send cable 24 hours beforehand through Curacao "PJC" to 'Piloto San Carlos' requesting permission to use Canal Exterior, ETA at "EM" buoy and at San Carlos. Reconfirm 12 hours before "EM" buoy and by VHF an hour before arrival on Channel 12.

The difficulty lies in language, although there is meant to be a traffic control system in Canal Exterior it is only in Spanish and the Co-ordinator speaks little English. Little information is required or given if you only speak English.

The Punta Cardon Pilot costs about U.S.$150 extra plus transport charges and entails extra distance of 70 miles from the West and 15 miles from the East.

The San Carlos Pilot boards from a fast launch at "B28" buoy and usually leaves just before the buoy. He will use hoist, in spite of official regulations which require gangway ladder arrangement, and leaves on port side outward (boards on starboard side inward). This is nearly always the case with situation of pilot station and wind, but may change.

Communications: Venezuelan station La Guaria (YVG – ALRS 6225). Most vessels use Curacao "PJC", very good. Agents reply through "PJC". Telex very good.

VHF: Call 'Piloto San Carlos' on Channel 16 (working Channel 12). Agent at Maracaibo on Channel 16 (works Channel 14, only during office hours). Agent at La Salina on Channel 16 (works Channel 14, 24 hour service but very distorted at El Tablazo).

Canal Exterior: Leads from "EM" buoy to San Carlos pilot station. A speed of 10 to 12 knots essential to keep vessel in channel on account of strong N.E. winds and currents across channel. Takes about 1 hour 10 minutes from "EM" buoy to San Carlos.

The least advertised depth at LW is 12.8 m. but shoals quickly at sides of channel. We found 11.0 m. LW to West side of channel at "B18" buoy.

Buoys "B14", "16" and "18" had shifted about 200 m. to West (August 1979). On the outer section of channel between "B4" to "B8" buoys a Westerly set right across channel very apparent and near Malecon Breakwater. At "B22" buoy an Easterly set experienced. Wind N.E. 4 – 5 tide 1 hour before and 1 hour after HW Malecon both cases.

The "E 34" pylon light off Pta. Diablo is very conspicuous. A new dredger 'Wado' works this section with North end Canal Interior. A large suction dredger, pulls to side of channel to let vessel pass. Only Spanish and German spoken. The old 'Zulia' dredger has stopped working. Another dredger is being completed for the Government.

Canal Interior: About 1.5 hours pilotage to Puerto Miranda, speed above manoeuvring. This channel is generally deeper than Canal Exterior. The advertised depth of 12.8 m. seems reliable. Pilot told me they hope to get both channel Interior and Exterior deepened to 15 m. LW in the near future.

Pile light beacons "T46" and "T40" have been replaced by buoys.

Pratique: Given on berth.
Notice of Readiness: Can be tendered on arrival at berth. It is finally brought down with Bill of Lading on completion. This is normal practice. As we were cooling down it was received at completion of cooldown. Normally on berthing with lines connected.

EL TABLAZO:
Pilot: A Docking Pilot boards just before berthing and unberthing of vessel.
Tugs: 2 tugs of 1,800 h.p. Secure in "American" style using their lines.
Situation: For all intents and purposes part of Puerto Miranda but operated by different company.

Located just S.E. of Puerto Miranda berths. El Tablazo consists of 3 piers. Bulk, liquid and a small soda pier.
Anchorage: At El Tablazo – off berth, just East of main Maracaibo channel. Good holding – 3 shackles.
Pier: The bulk pier handles bulk and bagged urea fertiliser through 4 shiploaders fed from a conveyor. Three on the South side and 1 on the North side. Two of the loaders on the South side handle bagged urea down corkscrew chutes.

The liquid pier is to the South of bulk pier – berth both sides and handles ammonia, butane, propane, propylene.

Two Chicksans each side. The inshore being of 10 in. both sides and seaward being of 8 in. but fed by 10 in. line. Couplings are 300 ASA but 150 ASA spool pieces generally fitted.

Vapour lines are flexible stainless braided with rubber covering – ship's derrick required, 300 ASA coupling with 150 ASA spool piece. All berths – head IN. On the South side the outer edge of the dredged channel is marked by buoys.

All berths have good rubber fenders. Liquid pier outer end has two full faced mooring dolphins connected to main pier by catwalk. The least depth at all berths at LW is 6 fathoms, except small soda berth which has 2 fathoms at LW.
Moorings: 2-3-1 each end. Ship put alongside pier before moorings out. Plenty of mooring gangs. Very particular on position to within 0.5 m. Gangway no problem.
Fresh Water: At 15 t.p.h. from pipe at manifold amidships. There is a pumped supply at 70 t.p.h. used for loading small tankers to take to outports where supply is limited.
Operations: Language problems. There is one Loading Master who speaks good English. Surveyor on arrival and departure. Very co-operative. Venting allowed up riser.

Vapour return line goes to flare at ship's expense and can only be used if 100% product.

Max. rate ammonia 500 t.p.h., but initially can get plenty of stops. S.G. given at 15°C. The control of the rate is not very fine. You can get down to 20 t.p.h. but increase very broad. Usual notice for completion.
Dock Density: 1003.
Documentation: Carried out at berth inward, sometimes vessel taken off berth outward to local anchorage and clearance given there. Sometimes in the past inward clearance done at Maracaibo, NOT NOW.

There is much written in publications and passed around about visaed crew lists and deviation cables. I have tried, in talking to the Agent and to the Authorities to clarify the situation.

Visaed crew lists are NOT required now. But there is still a requirement that because the ship has no visaed crew list she must have deviated on passage.

Basically what is required is that the ship should be cleared on sailing for Venezuela to say, Trinidad, for orders or Curacao not Maracaibo, then on passage receive a message deviating her to Maracaibo. If she does not have deviation message a fine could be imposed but the Agent says all ships have required cable so do not know of fine being imposed.

Required:
7 Crew Lists.
3 Store Lists. Victualling only, can include bond.
3 Slop Lists. Could probably combine with above.
2 Ballast Lists. To give amount and cleanliness.
1 Vaccination List.
3 Crew Manifests.
1 Health Declaration.

I cabled in a Pratique message as a matter of practice.

Shore Passes: Given by Agent for each crew member, no photos needed. Not required to be handed back on departure. Valid 3 days. After completion there seems to be a normal documentation delay to obtain clearance of up to 12 hours.
Shore Leave: The Agent will lay on a launch, but not really necessary as at El Tablazo liquid berth vessel is near the boat pier and fast launches run frequently to Maracaibo (takes 15 minutes). Arrange through Loading Master.

Can change sterling or dollars in local hotels, rate Bolivars to $, 4.30.
Films: Change Walport films at Puerto Miranda. Agent will send launch. Crew member has to go with films to change.
Agent: Only Agent on departure – no officials. Bill of Lading given by Terminal before Agent arrives.

SHIPMASTER'S REPORT: July, 1981.
Experienced following when entered Maracaibo Lake, mid-July, 1981.

Arrived EM buoy and obtained permission from San Carlos Pilot Station via VHF to enter outer channel and pick up Pilot at Buoy No. 26. During the piloting the Pilot asked asked me whether I had previously entered outer channel, which I confirmed with the remark *many years ago*.

After berthed my Agent informed me that a new regulation required Ship Masters to pick up Pilot at Punta Cardon inward bound, unless the Master with said vessel had actually entered Maracaibo Lake *within the past 6 months*, for which he was automatically permitted to enter outer channel and pick up Pilot at Buoy No. 26.

Fines might be enforced upon Masters neglecting this new regulation.

SHIPMASTER'S REPORT: August, 1981.
If the Master of a vessel enters the channel for the first time, or even if *more than six months* since the last visit, he must embark the Pilot close to Punta Cardon. The distance between Punta Cardon and "EM" buoy is approximately 80 miles.

If less *than six months* since the last visit, Master is authorised to pick up the Pilot when passing Buoy No. 26.

In the first case 24 hours prior notice should be given to the Pilot, and when approaching Punta Cardon vessel should call "Marina Cardon" on VHF Channel 16.

Section A

BAJO GRANDE: 10.29 N. 71.38 W. (See Plan)

(1) OPERATOR: Maraven, S.A. Oil Terminal.
(2) OPERATOR: Maraven, S.A. Natural gas liquids processing facilities.

(N.B. For important details of Documentation, Pilotage, etc., see "Maracaibo Lake").

(1) **OPERATORS:** Maraven, S.A.

LOCATION:
Maracaibo: On the North-Western shore of the Lake Maracaibo: Position: Lat. 10° 40′ N., Long. 71° 38′ W.

Maracaibo is the capital of the State of Zulia and seat of all Government and Consular Offices, as well as the port of entry for all vessels loading at terminals in the Lake of Maracaibo. Upon arrival to Maracaibo, a representative of the appointed Agency will go on board to assist vessel.
Bajo Grande: Loading Pier: Position: 10° 30′ 50″ N., 71° 36′ 8″ W., about 8 miles (12.8 km.) South of Maracaibo on the Western shore of the Lake and about 9,000 ft. (2,743 m.) offshore with its centre line North-South. Two vessels can berth simultaneously, one outside at Berth No. 1 and one inside at Berth No. 2.

The wharf is constructed as a pile-supported concrete island. It consists of 3 breasting platforms plus bow and stern mooring platforms. Pier Heads are 860 ft. apart.
DOCUMENTS: The following documents should be presented by the Master:

Clearance from Sailing Port with the following attached:
Store List.
Crew List.
Slop Chest Inventory.
Ballast Certificate.

Special ballast report made up by Master.

The Maracaibo Port Captaincy, requires that the Masters of all vessels entering this jurisdiction, deliver to the Maracaibo Port Captain's representative, during his visit to ships in the port of Maracaibo, a report which must answer the following questions concerning ballast:

(1) Port or place where ballast was taken.
(2) Quantity taken.
(3) Type of ballast and condition of same.
(4) Where deballasting operation was or is to be carried out.
(5) Approximate deballasting time.
(6) Any other pertinent information that may be required.

Crew List.	6 copies
Store List.	6 copies.
Slop Chest Inventory (Deck, engine and cabin stores listed separately).	6 copies
List of Personal effects.	6 copies
Derat Exemption Certificate.	Original
Venezuelan Net Tonnage Certificate.	Original
American Crew List.	4 or 2 carbon copies.

(If required: See under "American Crew List").

Boarding Party: The boarding party usually consists of the following persons:
One Quarantine Official.
Two Customs Officials.
One Sanitation Department Official.
One Port Captain's Representative.
One Foreign Service Department Official.
One Vessel's Agent.

American Crew List: All non-American vessels loading for USA port should have the American Crew List ready on arrival in Maracaibo to be visaed by the American Consulate in Maracaibo and placed aboard ship before departure. The crew list should be prepared on Immigration and Naturalization Service Form No. 1–418 (Crew List Manifest) and should contain two sections:
Section 1 – Should list those crew members who are American or who possess individual visa documentation to the United States.
Section 2 – Should list, in the alphabetical order of their last names, those alien crewmen who lack United States visa documentation and therefore require inclusion in the visa of the crew list.

Only one name may be placed on each line of the crew list. Two names should not be placed in the space of one line, nor should a full line between two names be left vacant. All copies of the crew list presented must be legible (Occasionally the names of the crewmen included on the carbon copies of some crew lists presented at the consulate are blurred beyond recognition).

The information requested under column 1, 2 and 3 should be filled in completely.

Column 1 – Should always contain the complete first name and middle initial of the crewman.

Column 2 – Should show the nationality of each crew member and the number of his travel document.

Column 3 – Should always include the name of the port where the crewman was shipped, not simply the country.

At the time of the vessel's first application for a crew list, the crew list must be presented in 4 copies:

Original and 1 copy – Should contain only the information requested under Columns 1, 2, and 3.

Two Copies – Must include the following information of those crewmen to be included on the crew list visa.

Column 4 – Should list the date, city and country of each crew member's birth.

Column 5 – Should show the place of issuance of the seaman's travel document and the name of the Government which issued the travel document. (It is not necessary to list the date of issuance of the travel document).

Cargo documents:

1. *Master's copy of Bill of Lading* – The Bill of Lading form used is the usual Warshipoilvoy form. Masters wishing to use another form should furnish 20 blanks on arrival in Bajo Grande. Master is requested to sign 3 negotiable Bills of Lading (Originals).
2. *One copy of the Certificate of Quantity and Quality (Q. & Q.).*
3. *One copy of the Ullage Report.*

Outward Clearance:

Following documents are delivered on board by the local Agent before sailing:

1. *Customs Clearance* – Duplicate of "Conocimiento de Embarque" and Duplicate of "Manifiesto de Carga". (Both stamped and signed by Customs) or any other document specifically requested by the consignee or nominating source.
2. *Communication* – A letter from Maracaibo Customs Authorities to Authorities in port of destination.
3. *Zarpe* – Permission to sail signed by Maracaibo Port Captain. This is brought on board in Bajo Grande by the outbound Pilot.

Customs Guard: The Customs Guard will request Master to countersign his time on board the vessel. This is counted from the time the first hose was connected until all hoses were disconnected, regardless of whether the vessel was receiving cargo or not.

Accommodation Ladder: Vessels must provide an accommodation ladder. The use of rung ladders, pilot ladders, etc., is contrary to Port Regulations. Port authorities will board only by means of an *accommodation* ladder. it is recommended to rig this in advance in order to avoid unnecessary delays.

In order to guarantee the security and safeguard the lives of the officers that board the vessel inbound in Maracaibo, it is imperative that Masters strictly comply with the following precautionary measures:

(1) Each of the components and functional parts that holds together or supports the gangway ladder must be maintained in excellent condition.
Therefore, wire ropes, guide blocks and bolts etc., found to be defective or in bad condition must be immediately replaced.

(2) For maximum security, each time that your vessel arrives in this jurisdiction, the above mentioned mechanisms should be thoroughly checked and tested by the personnel aboard vessel before the gangway ladder is used by the boarding party.

APPROACHES:

Channels leading to Lake Maracaibo: The channels leading to the Lake Maracaibo are called the Outer Channel, the Inner Channel and the Lake Channel.

Outer Channel: The Outer Channel starts at the E.M. Buoy position: Lat. 11° 13′ 47″ N., Long. 71° 33′ 31″ W. and ends at the Zapara Island, a distance of about 14 miles. (About 22 km.).

The light characteristics of E.M. Buoy are: flashing white every 5 seconds, visibility approximately 5 miles.

There are no turns in the channel and the course is 189°. The channel is 100 ft. wide and has a normal controlling depth of 44 ft. LWS with tidal range varying about 2 ft. 3 in. Cross currents are sometimes encountered near Zapara, San Carlos and Pescadero Islands, especially at LW when the cross currents are strong. Overtaking at these points is forbidden. There is one anchorage zone in the Outer Channel which is a trapezoid on the port side when navigating inbound near the buoys B – 14, B – 15, B – 16 and B – 18. All buoys in the Outer Channel are equipped with radar reflectors.

The Southern end of the Outer Channel is marked by buoys B – 27 and B – 28.

Inner Channel: The beginning of the Inner Channel is marked by buoys B – 29 and B – 30. The Inner Channel continues on the same course as the Outer Channel for about 10 miles, whereafter the direction changes to 150°, The entire length of the Inner Channel is about 12 miles. Beacons T – 55 and T – 56 mark its Southern end. The normal controlling depth is 44 ft. LWS. The channel is 800 ft. wide. Vessels are not allowed to overtake each other in the Inner Channel between buoys B – 29 and B – 30 and light beacons T – 25 and T – 26.

Vessels may overtake each other in the Inner Channel between light beacons T – 39 and T – 40 after having exchanged prescribed signals with the vessels to be passed. This manoeuvre is, of course, allowed only if conditions are favourable and no vessel navigating in the opposite direction is in sight. From beacon T – 56 to Maracaibo harbour the channel is 800 ft. wide, depth 44 ft., its end is marked by buoys B – 73 and B – 74.

Navigation through Channels:

Inbound vessels leave to starboard side the buoys and beacons marked with even numbers and to port side the buoys and beacons marked with odd numbers.

Outbound vessels shall leave to port side the buoys and beacons marked with even numbers and to starboard side the buoys and beacons marked with odd numbers.

Vessels should pass as close as possible to the channel's edge on starboard side. Loaded vessels have preference.

Approaching vessels are to reduce speed in order to minimize the suction force of the displacing waters.

Vessels must maintain a distance of 1 nautical mile (1,852 m.) by day, or night from other vessels navigating in the same direction.

No vessel should start to manoeuvre to overtake another vessel before having received clearly the affirmative signal from the ship to be passed.

A grounded vessel is not allowed to start any manoeuvre when another vessel is passing. Dredgers are frequently at work in the channels and caution should be exercised in passing them. Signals used by the dredgers are as follows:

Daytime: Black cylinder hoisted on side of yardarm:
You may overtake me on the side on which the cylinder is shown.
Two black balls over the bridge:
The channel is blocked.

Night:
Green light on side of yardarm (A white light on mast head helps to show on which side the green light is placed).
You can overtake me on the side on which the green light is shown.
Two red lights over the bridge:
The channel is blocked.

The tidal range is 4 ft. at neaps. Observed squat in the channels is about 1 ft.

Maracaibo Lake Channel Guard Service Corps have had evidence of vessels travelling out of the navigation channel in the vicinity of buoys B – 3, B – 5 and B – 7; this risky procedure is considered very dangerous to the safety of the channel buoys and its installations.

Captain of all ships are reminded that all vessels inbound or outbound *must* pass the EM Buoy on the port side. This operation will be registered and controlled by their electronic devices installed at San Carlos Pilot Station.

Violators of this regulation, in addition to being economically responsible for damages to the buoys and related accessories, will be prosecuted in accordance with Article 118 Section I of the Venezuelan Law of Navigation.

In view of the above, and keeping in mind the protection of the interests of your owners, we ask that you comply at all times with this regulation emanated from the Port Captaincy.

PILOTAGE: Compulsory. Vessels proceeding direct to the Bajo Grande Terminal must enter outer channel and embark Pilot between buoys 25 and 27. After vessel arrives in vicinity of channel entrance, Master must contact *San Carlos Pilot Station* by radio telephone on Channel 16 requesting Pilot at buoys 25 – 27. The launch that leaves San Carlos Pilot Station with Pilot for ship, takes approximately 20 to 30 minutes to cover distance, and distance, between Buoys and San Carlos is approximately 6 miles (10 km.).

Master must advise Maraven, S.A. and Agent ETA buoys 25 – 27, 72, 48 and 24 hours prior to arrival there.

Masters of Vessels entering Lake Maracaibo for the first time must cable their Local Agent notifying this fact, in order that the Agent may comply with the Port Regulations. This security measure makes it necessary for the ship to pick up a Pilot at Punta Cardon.

The Master should notify Agent or contact Maraven, Punta Cardon by radio on Channel 12. As no Pilots are available at Punta Cardon, the Local Agent for the vessel requires 48 hours' notice in advance to facilitate making arrangements to fly a Pilot to Cardon and then have Maraven place the Pilot on board the ship.

The co-ordinates of Punta Cardon are approximately Lat. 11° 36′ N., Long. 70° 15′ W. Maraven will charge approximately Bolivares 1100.00 for this service. In addition, the ship will have to pay air fare, hotel expenses, and a higher Pilotage fee for this service. However, if the Master of a ship has previously entered the channel as an officer of a ship, he is not required to pick up a Pilot at Punta Cardon.

Masters are reminded that Pilots are authorised to leave the Jurisdiction, only when they are disembarked in Venezuelan ports. With this understanding, when special circumstances arise in which the Pilot cannot be disembarked at San Carlos and the ship is unable to enter the nearest Venezuelan port to disembark the Pilot, in this case the port of "Las Piedras", it is required that the Agent as well as the Master of the vessel, forward to the Port Captaincy at the earliest opportunity a detailed report giving the reasons that compelled the Master to take the Pilot abroad.

Pilots act in an advisory capacity only, and therefore the Master of the vessel retains full responsibility at all times. In the event it becomes necessary to disregard the Pilot's instruction in order to ensure the safety of the ship, Master must forward to Local Agent a full written report on the circumstances for delivery of same to port authorities.

The Venezuelan Pilotage Law stipulates that Pilots must be provided with the same lodging as is given an officer. In case no extra officer's cabin is available, suggest the hospital be used by the Pilot. Also, Pilot should be seated at the officers' mess for his meals.

In case of accident to Pilot while performing his duty on board, it is the responsibility of the Master to furnish the Pilot with a full written report on the accident before the Pilot leaves the vessel. The Pilot must be able to present such a report in case of a legal claim.

Note: According to new Port Regulations for vessels proceeding to the Bajo Grande Terminal, the Official Pilot (Conduct Pilot) will board to conduct the vessel to Bajo Grande and disembark; vessel will then pick-up the other Official Pilot (Docking Pilot) for berthing manoeuvres.

As a result of accidents that caused the loss of lives, the Maracaibo Port Captaincy issued a Regulation with the view of safeguarding human life at sea and other navigable waters; Official Pilots that must embark on or disembark from undocked ships, must use an automatic-inflated type life vest. This procedure is also compulsory for all persons from private or public entities that are required to go aboard vessels that are anchored, stopped or navigating in the waters of Lake Maracaibo. Likewise, at the side of the boarding ladder where the Pilot boards or disembarks, a hoist or boatswain's chair shall be placed there, and within it a life line and a gas light ready to be used in case it becomes necessary. The Port Captaincy will see to it that this Regulation is strictly complied with.

Docking Pilot: The Government's Pilot will assist in docking operations. It should be borne in mind that Pilot acts as adviser only. The Master retains full responsibility at all times. Any damage incurred to vessel or loading platform which may be deemed to have been caused by the Mooring Pilot's fault or negligence, may be held against the ship.

Undocking: Government's Pilot will assist in undocking. Two tugs will be used as for docking and undocking.

ANCHORAGE: The Pilot will not manoeuvre the ship into anchorage, but will indicate the proper location to anchor. Care should be taken because of small boat traffic.

MAX. SIZE: The following restrictions in size and draft upon loading exists for vessels docking at Bajo Grande:

	Maximum Loading Draft	*Maximum Vessel Size*	*Max. displacement upon Berthing (tons)*
Outside Berth (No. 1)	39 ft. 00 in.	55,000 d.w.t.	42,000
Inside Berth (No. 2)	32 ft. 00 in.	36,000 d.w.t.	20,000

RADIO: *Information to be cabled to Local Agents 3 days prior to arrival:*

1. *Flag:* If the vessel has loaded in Bajo Grande before or is listed in the Tanker Register published by H. Clarkson & Company Ltd., London, the nationality of the vessel need not be cabled.

2. *Sailing port and at which other port vessel will call in this area:* For clearing the vessel in and out of Maracaibo, local ship Agents must know beforehand from where the ship comes and which other port it will call in this area. Therefore, it is of importance to inform Agents whether the vessel will load part cargo or bunker, at which terminal, and whether inbound or outbound.

3. *Port for which vessel is cleared:* In case the vessel was diverted *en route* and consequently is not cleared for Maracaibo or one of the terminals in the Lake of Maracaibo, the Local Agents must obtain from authorities special permit for the vessel to enter the Lake of Maracaibo.

4. *Ballast Certificate:* If the vessel arrives in ballast a "Ballast Certificate" is mandatory. A fine against the vessel will issued by the Port Authorities if vessel does not have this certificate.

5. *Estimated Time of Arrival:* Cable ETA San Carlos Pilot Station Buoys 25 – 27 (See "Pilotage") or, if the vessel is taking part cargo or bunkering inbound, cable ETA, bunker or first loading port. Please use local time if possible (4 hours behind GMT).

6. *Tonnage:* If the vessel has not loaded at Bajo Grande before, also cable the Gross and Net Tonnages. To determine whether the International or the Venezuelan tonnage should be mentioned, see General – "Tonnage Applicable".

7. *Master's Full Name:* Please sign your first message with Master's name and surname, which is also needed to clear the vessel in Maracaibo.

8. *Changed ETA:* An additional cable should be sent about 48 hours and 24 hours prior to arrival at pilot station Buoys 25 – 27 stating ETA.

Proper use of Radio Frequencies: We have received several circulars from the Maracaibo Port Captaincy, requesting Terminal Operators to caution all Masters of vessels calling at Bajo Grande Terminal on the improper use of the International Distress Frequency of (2182 kHz) for personal conversations. This procedure is contrary to the security of vessels.

A letter containing such caution will be delivered to the Master of each vessel loading at Bajo Grande by the Agent, requesting that the Master sign a copy signifying his acknowledgement of said letter of notice.

The International Distress Frequency was established specifically and exclusively for emergency calls such as shipwreck, fire and accidents. It is also used by ships and shore stations to make first contact (VHF Channel 16) but immediately after contact is made, the operator should switch to one of the 52 Channels available.

9. *Compulsory use of Single Side Band Radio:* A circular letter from the Venezuelan Ministry of Communications, states that no licence will be granted for the installation of radiotelephone stations of modulated amplitude (A3). The installation and use of Single Side Band radiotelephone equipment is obligatory.

In consequence, the Ministry has requested that the terminal inform all users of Double Side Band (A3) radiotelephone equipment in order that they proceed immediately to install in their ships, launches and all other marine vessels Single Side Band equipment with the same frequencies that are presently in authorised use, which is VHF Channel 16.

The listening and Safety Station YXW – 3 installed at the Venezuelan Nautical School is equipped to answer any calls on the International Distress Frequency with their transmitter of 1 kW.

As a result of the foregoing, a letter containing the above information has been prepared by the Terminal which will be delivered to the Masters of all vessels calling at the Bajo Grande loading terminal. The Masters of all vessels are required to sign a copy of this letter in acknowledgement of receipt.

NOTICE OF READINESS: Masters are free to tender their ships as being ready to load at any place and time which, in their opinion, conforms with the terms of the charter party. Terminal personnel authorised to countersign the Notice of Readiness have been instructed to indicate the time vessel was all fast. This does not imperil in any way the rights of the shipowner in his negotiations with the charterer and it limits the Terminal's liability to the consignee.

TUGS: The Venezuelan Government has ruled mandatory the use of 2 tugs for docking and undocking. Vessels over 60,000 d.w.t. will use 3 tugs for docking and undocking.

CARGO OPERATIONS:

Deballasting Facilities: A recent Circular letter from the Venezuelan Ministry of Communications, Maracaibo's Port Captaincy, states that as of October 1976, no ballast (either clean or dirty) can be discharged into Lake Maracaibo waters. Therefore, all ballast must be pumped ashore to the petroleum terminal on which vessel is to take cargo. Heavy fines are assessed for vessels violating this law and therefore we strongly recommend Masters to be particularly careful in this regard.

Shore deballasting facilities are available at Bajo Grande and are subject to no special regulations and procedures as yet. Tanker ballast water is pumped through two 8 in. hose connections into a 24 in. line of about 9,000 ft. in length to a 120,000 bbls. receiving basin situated on shore.

The deballasting basin is limited to receiving *only* petroleum hydrocarbons and petroleum hydrocarbons derivates. Emulsifiers, caustics, acids and chemical slops are absolutely unacceptable. Contamination of Lake Maracaibo waters with oily or chemical materials of any nature is strictly prohibited by Venezuelan Laws. The terminal is required to report to the Authorities any such contamination by vessels docked at Bajo Grande. HEAVY FINES ARE THEN ASSESSED AGAINST THE SHIPS. Vessel's cooperation is requested to prevent contamination from tank overflows, bilge oil, line leaks or from any other source.

Tank Cleaning and Drying: Precautions as are common for any heavy oil should be taken to ensure that no ballast is left in any tank. If the cargo is contaminated with water, the water will not separate from the oil. The salt content of the oil will be raised approximately 10 lbs. per 1,000 bbls. for every 0.10% contamination by sea water. All cargo compartments must be stripped extremely dry.

Cargo pipe-line should be drained and or purged of water. On standard T – 2 type vessels, this can be done by draining the fore and aft main cargo lines, both suction and discharge sides, into the pump room bilges followed by opening of main suction valves on each individual compartment, thereby releasing water retained in dead and transverse lines. After this procedure is completed, each compartment should be restripped with stripping pumps and lines, followed by draining the stripping line to pump room bilges. On other ships equipped with looped systems it is possible to blow the system with air and drain water into the bilges. In other situations, fresh water might be used to flush cargo piping systems of salt water and in turn strip salt water and fresh water as outlined for T – 2 vessels. All deck scuppers should be securely plugged and all precautions should be taken to avoid pollution of lake waters.

Inspection of Tanks: Before loading can commence, tanks and loading system must be inspected and passed. This is usually done by the Terminal's own Cargo Inspector but, if consignee so requests, third party inspection can be arranged.

Inspection Companies available in Maracaibo are the following:

Chas. Martin Venezolana de Inspecciones	(CHAS MARTIN)
E. W. Saybolt & Co., S.A.	(SAYBOLT)
Redwood Petroleum and Petrochemical Division	(REDWOOD)
Analistas e Inspectores Venezolanos de Petroleo C.A.	(AIVEPET)
Inspecciones, S.A.	
Caleb Brett Venezuela, C.A.	

Line Displacement: When a vessel is loading crude and products, it is usually necessary to displace lines once or twice during loading. Masters will be advised of necessary line displacements before loading starts and are required to take note because NOTICE HAS TO BE GIVEN BY VESSEL when pumping should be stopped and tanks changed. Once shore tanks have been changed, it will not be possible to change the quantity of the product already in the ship, as shore lines will then contain a product different from the one already loaded. *Ship's gauges and/or draft should be carefully checked when calculating required quantities.*

Spillage: In case spillage occurs, the Terminal Port Supervisor must be advised immediately, as any spillage must be reported to the Authorities without delay.

There has been considerable discussion in Venezuela concerning oil spillages resulting in contamination of Lake Maracaibo. Considerable pressure is being exerted by Government agencies to eliminate all spillage, and the Terminal is making every effort to avoid contamination of Lake Maracaibo.

While vessel is at Bajo Grande take special precautions to avoid dirty ballast, bilge water or any other contaminant entering the Lake.

If a spill should occur and Terminal representative, the Government's representative of the National Guard observes that the waters of the Lake are being contaminated by any substance from the vessel the Terminal will request that vessel suspends deballasting, loading or discharging operations immediately and all consequences that might arise from this operation such as short loading, the unmooring of your vessel, fines, damages to fishermen, clean up costs, etc., *will be strictly, for vessel's account.*

We strongly recommend to Masters to emphasise to the officers on deck to endeavour to avoid spillages and to make certain that the scupper plugs are installed prior to commencement of loading operations in order to withhold on deck any spillage that might occur.

After Loading: All Butterworth plates, tanks tops and ullage plugs should be inspected to ensure against entry of water. Inspection of ullage plugs should follow on completion of temperature readings because of the necessity of taking temperatures en route. Sea suction valves should be secured by positive means until all cargo has been discharged. This may be accomplished by numbered seals, chains and padlocks. The method of securing should be noted on the inspection documents. Regardless of which method is used, appropriate log entries should be made indicating the date, time and method used and under whose supervision, both vessel officer and/or Cargo Inspector, such method was applied.

About 1 hour is required for the preparation of the cargo documents which are normally delivered on board before sailing.

Temperature of Boscan Crude and Boscan Products at Sea: On short voyages, as for instance to the U.S.A., it has proved most practical to maintain the loading temperature. On longer voyages, as for instance to Europe, the temperature may be dropped to 130°F., which does no harm as long as sufficient time is given to bring the temperature up again to that required for discharging. Masters should, however, not expect a temperature rise of more than 5°F. per day, especially if the sea temperature is low. The heat transfer properties of Boscan Crude are very poor as are those of the heavy products made from this crude. Many ships have been delayed in the discharge port due to too low cargo temperature. A temperature of 160°F. is suggested for discharging Boscan Crude, Topped Boscan and cutback asphalts.

Discharge Cargo: Boscan Crude has a flash point of 110 – 160°F. and a maximum viscosity of 1400 SSF at 140°F. The viscosity at other temperatures follows the pattern of other petroleum products. Boscan Crude has been successfully handled in ships fitted with both reciprocating and centrifugal type pumps with forward and after pumprooms respectively. It is generally found that this crude can best be handled at a temperature which brings its viscosity to about 600 SSF – 160°F. Vessels with forward pumproom should control stern trim so that it does not exceed about 4 ft. while stripping the after tanks. Also a 5° list is very helpful when stripping. Once the cargo gets below heating coils, tanks must be pumped empty as fast as possible. At times it has been found helpful to gather tanks strippings into a single tank for discharge ashore, as it is very difficult to strip against heavy back pressures. Watch reciprocating pumps for vapourlock. Because of high viscosity, proper care should be taken that no oil is left in vessel discharge lines at low temperature.

Tank Cleaning After Discharge Cargo: Many Masters have expressed concern over tank cleaning after discharge. Assuming that the ship proceeds to sea for this operation and has sufficient time for proper execution, vessel may be cleaned quite thoroughly using the Butterworth system. However, it is of vital importance that the system be used at maximum pressure and temperature (not below 160 p.s.i. and 170°F respectively). At these conditions and with 2 machines, it has been found that about 4 hours are required for each tank. It is of importance to keep the tanks well stripped during the Butterworthing. Some prefer to steam out the tanks before Butterworthing. If this course is adopted care should be taken that the steaming does not last more that 1 hour as the heat will drive off the light ends of the oil and leave a rubbery residue that is very difficult to remove.

It has been found helpful to keep the machines in LOW position for about 1 hour and the HIGH – MIDDLE and LOW in order, in the usual manner.

Boscan Crude and Products/Light Products:

Loading Product	*API Gravity*	*Tempera-ture °F*	*Loading Lines used*	*Normal Loading Rate B/H*
Boscan Crude	10.0 – 11.0	160	2×18 in.	15,000
Boscan Crude Blends	13.0 – 19.0	140	2×18 in.	15,000
Topped Boscan Crude	9.5 – 10.0	160	2×18 in.	15,000
Topped Boscan Crude Asph. Grade	8.0 – 10.0	160	2×18 in.	15,000
Cutback Asphalt	11.0 – 15.0	170	2×12 in.	5,000
Asphalt Cement (Pas)	5.0 – 8.0	300	1×14 in.	5,000
Gasoil	35.0 – 42.5	90	1×12 in.	6,000
Fuel Oil No. 2	38.0 – 40.0	90	1×12 in.	6,000
Fuel Oil No. 5	21.0 – 22.0	120	1×12 in.	5,000
Fuel Oil No. 6	16.0 – 18.0	160	2×18 in.	16,000
Light Naphtha (LSR)	70.0 – 73.0	85	1×12 in.	6,200*
Heavy Naphtha (HSR)	52.0 – 53.5	85	1×12 in.	6,200*
JP – 4	45.0 – 51.9	80	1×12 in.	6,200*

*Maximum rate due to Bajo Grande Terminal security regulations.

FUEL:

Advance Notice of Requirement: Should a vessel arriving at Bajo Grande require any bunkers, Owner or Operator must place their nomination with Maraven, S.A. via Telex No. 23535 Mara Vc as much in advance of the delivery date as possible. Telex should indicate name of vessel, ETA at Bajo Grande and quantity and quality of Marine Fuels required. A cash deposit in U.S. Dollars covering the nomination must be made prior to the delivery date into the following account:

Chase Manhattan Bank,
Chase Manhattan Plaza,
34th Floor,
New York, N.Y.
Current Account No. 001-1-992468 ("BCV 4").

Owner or Operator must also request Chase Manhattan Bank to confirm via Telex to Maraven, S.A. that such deposit has been made in order to cover the cost of bunkers to be delivered to vessel arriving at Bajo Grande at the current ETA. Only after this Telex has been received will delivery actually proceed.

Bunker Facilities: Bunkers are available from pipe-line at Bajo Grande Terminal for vessels loading and unloading cargo at Berth Nos. 1, 2 and New Pier. Bunkering rate is about 2,500 bbls.p.h. for Bunker "C", intermediate bunker fuels and marine gas oil.

Marine Fuels and Lubricants Available: Bunker fuel (sometimes called Bunker "C"), intermediate bunker fuels and marine gas oil.

Lubricants are generally available in the Maracaibo area. Should you require any, we recommend that vessel's local Agent be contacted.

Lighterage: Bunker fuel, intermediate bunker fuels, marine diesel and gas oil are also available for ships in the Maracaibo area. 72 hours' advance notice is required for barge deliveries of all products.

FRESH WATER: Delivery of boiler and potable water is made by barge, *minimum quantity 100 tons.* The barge holds about 160 tons and the pumping rate is about 25 t.p.h. Requirements should be cabled in advance to the Agent of the vessel in Maracaibo.

REPAIRS: No major repair facilities are available in Maracaibo but small repairs can be undertaken by local machine and electric shops. Shore labour can be furnished if required. Technicians are available for minor radio repairs. Nearest dry docks are at Curacao for vessels up to 30,000 d.w.t. and at Puerto Cabello, Venezuela for vessels up to 18,000 d.w.t.

CUSTOMS: *Contraband:* Strict compliance with the Customs Law of the Country is enforced by the Authorities and Masters are strongly advised to caution crew members against attempting to smuggle cigarettes. 1 open package per person is allowed to be carried ashore, but a greater quantity will result in fine and imprisonment of the offender as well as lost ship's time. Due to the very strict enforcement of the Customs Regulations, it is recommended that no goods be carried which are not shown on the store list. Any new articles (clothes, shoes, etc.) should be included in the store list and marked as personal belongings. If during a checkup by Customs, articles considered as contraband are found, this will not only mean confiscation of these articles, but also hours or days of lost ship's time, while the case is handled at court.

CONSULS:

Following countries have consular representation in Maracaibo:

Argentina
Austria
Belgium
Bolivia
Colombia
Costa Rica
Denmark
Dominican Rep.
Ecuador
El Salvador
France
Germany F.R.
Great Britain
Guatemala
Italy
Mexico
Netherlands
Nicaragua
Norway
Panama
Peru
Puerto Rico
Spain
Sweden
U.S.A

SURVEYORS: American Bureau of Shipping and Lloyd's Register have Agents in Maracaibo. Their services may be procured by cabling requests to the local Agent at Maracaibo.

HOLIDAYS: The Terminal office will be closed on the following days. New Year's Day (January 1st); Easter Thursday/Friday (March/April); Declaration of Independence (April 19th); Labour Day (May 1st); Battle of Carabobo (June 24th); Independence Day (July 5th); Birthdate of Simon Bolivar (July 24th); Columbus Day (October 12th); Chiquinquira's Day (November 18th); Christmas Day (December 25th); All Saturdays; All Sundays.

SHORE LEAVE: Shore Leave is permitted at the discretion of the Port Authorities; required number of shore passes will be brought on board on arrival in Maracaibo and have to be returned to the Customs Guard again before the vessel leaves Bajo Grande.

GENERAL:

Tonnage Applicable on Fees: On ships registered in countries which have a reciprocal tonnage agreement with Venezuela, the gross tonnage registered in such countries will be applied for calculating pilotage fees. Such countries are:

Denmark
France
Germany F.R.
Ireland
Netherlands
Norway
Portugal
Sweden
United Kingdom
U.S.A.

On ships registered in countries not listed above, such ships calling at Venezuelan ports for the first time must be measured for Venezuelan tonnage by the Port Captain. It is usual practice to take ashore the ship's Panama Canal or Suez Canal International Gross Registered Tonnage Certificate, which is used as a basis for recalculating tonnage under the Venezuelan regulations, and return it before sailing. The Venezuelan Admeasurement Certificate, when later issued, is forwarded to the Owners. A fee is charged for this certificate, which is payable only on the ship's first call.

Firearms and Ammunition: Firearms must not exceed 1 per Officer nor may the ammunition exceed 18 cartridges per Officer. All firearms and ammunition must be carefully declared on the store list and should be collected and held in Master's safe custody while vessel is in Venezuelan waters.

Guards: Customs Guards are stationed on the platform at Bajo Grande. They must be provided with sleeping quarters on the ship and seated in the Officers' mess for their meals. Non-compliance may cause cargo stoppage and fines. Masters are reminded that these guards are representatives of the Venezuelan Government and any uncourteous action on the part of the crew or passenger will be regarded as a slight against the Country itself.

Gangways: The ship is to supply a safe gangway, which allows easy access to the vessel. The Terminal has a gangway which may be used on request with the understanding that any damage to the gangway or ship or shore personnel through its use may be held against the ship.

Safety: Vessel must be in readiness to move at all times. The attention of Masters of turbine steamers are called to this regulation.

Ship's fire fighting equipment must be ready for instant use while vessel is alongside. Shore personnel will render assistance in an emergency but, since no fireboats are stationed in the immediate area, vessels should be prepared to combat fire without outside assistance. It is necessary to obtain Terminal's approval for repairs of propelling machinery.

Normal safety precautions apply. Smoking is not allowed on the pier. No hotwork is permitted on vessels alongside without *written* permission from the Port Supervisor. *Swimming alongside pier is dangerous and absolutely prohibited.*

Launch Service: The launch is primarily for the use of the port staff.

Taxi: Taxi service will be generally available upon request to vessel's Agent.

Visitors: According to Port Regulations concerning access to ships and loading terminals and in the interest of industrial safety, only persons directly concerned with loading operations will be permitted to board vessel or visit the loading platform at Bajo Grande.

Plimsoll Marks: The Port Captaincy requires that Plimsoll Marks be readily visible. If they are not clearly legible, permission to sail may be withheld and a fine imposed. This is applicable to inbound and outbound vessels.

We therefore, request your full compliance with this Regulation from the Maracaibo Port Captaincy.

Marine Stores/Charts: Marine stores are available in limited supply. Marine charts are not available.

Compass Adjusters: There are no compass adjusters in Maracaibo.

Seamen Left Behind: Sailing may be withheld until all crew members are aboard with exception of those ashore for justified reasons. It is important that Masters bear in mind that the Venezuelan Law will at all times hold the vessel's Master, Agent, or Owner responsible for any seamen left behind in Venezuela.

Crew in Transit: In case a crew member is left ashore for a justified cause, such as hospitalisation, repatriation, etc., his documents and personal effects are to be delivered to the vessel's Agent before sailing. A letter is required from the Master with detailed instructions as to maximum cash advance, etc. All expenses incurred by such members are for vessel's account.

Port Supervisor: Masters or their representatives are invited to call at the Port Supervisor's Office on shore in Bajo Grande or over the telephone on the pier, for any further help, information or complaints.

Terminal: Cable Address: Maraven, S.A., Maracaibo.

NOTICE: Issued by Maraven, S.A., Bajo Grande Refinery, Maracaibo.

PROCEDURE FOR BERTHING AND UNBERTHING MANOEUVRES

To the Masters of all the tanker ships arriving at Maraven's Refinery, Bajo Grande Marine Oil Loading Terminal, Lake Maracaibo, Venezuela.

Instructions concerning approaching and manoeuvres for berthing/unberthing at this Terminal.

With a view to prevent any possibility that your ship may cause damage to our installations, we shall highly appreciate it if Masters pay attention and respect to the following procedures:

1. Entrance Bajo Grande Refinery Terminal (Lat. 10° 30′ 50″ N., Long. 07° 36′ 08″ W.) is between the Main Navigation Channel Marker Buoys B86 – B88 and leaving between the Buoys BG2, BG1 and B86.

2. On ship's arrival to the Terminal Entrance Buoys, the Official Pilot, a Marine Officer, acting as a Liaison Officer of Maraven, will board the ship in order to assist her Master and the Official Pilot in all matters concerning inter-communications and co-ordination with the Terminal and on basis of his technical and local knowledge and experience give advice relative with the vessel's safe berthing/unberthing and safe mooring/unmooring to/from the pier.

The Liaison Officer will have with him charts, drawings and information on the Terminal, which will be available to the Master and to the Official Pilot for consulting purposes.

It is understood that the Liaison Officer only acts as a consultant or technical advisor to the ship's Master and to the Official Pilot appointed for conducting the ship to the Terminal and only on the matters hereinbefore already described. The vessel's Master and the Official Pilot retain their duties and responsibility of commanding the ship and of safely piloting her to the Terminal, respectively.

3. For best manoeuvrability ships arriving on ballast or partially laden, must arrive with a draft forward which should not be less than given in the following table and a trim by the stern of about 0.75% of ship's length on ships of 400 ft. length or more.

Length	*Draft Forward*	*Trim by Stern*
400 ft.	10 ft.	3 ft. 00 in.
500 ft.	12 ft.	3 ft. 09 in.
600 ft.	14 ft.	4 ft. 06 in.
700 ft. ideal	16 ft. (nor less than 14 ft.)	5 ft. 03 in.
750 ft. ideal	17 ft. (nor less than 14 ft.)	5 ft. 08 in.

The ship's total displacement in any case should not exceed 42,000 tons for ships mooring at Berth No. 1 and 20,000 tons for ships berthing at Berth No. 2.

4. For more information please consult the instructions and information for the port which will be issued to you opportunely on your arrival for first time to this Terminal, please comply with them, and see that they are complied with.

5. *Mooring Lines:* Prior to arrival at the Terminal, the vessel shall have all the necessary mooring lines ready for use together with a sufficient number of heaving lines and the equipment and the personnel required for mooring. All the lines used for securing the ship to the berth should be of the same material, construction and of approved characteristics.

6. *Tugboats:* Minimum 2 twin-screw tugboats of adequate horsepower for the size of ships ordinarily berthing at this Terminal will assist the vessel in the berthing/unberthing manoeuvres. If the Master so request or in the case of the size of vessel and wind and/or current conditions so require, the Terminal may order the use of 3 tugboats for the manoeuvres. The tugboats, on arrival, will come alongside the ship before entering in the Terminal.

The first communication with the tugs is via VHF Channel 16 as first contact and then changed as per instructions.

7. *Berthing:* At Bajo Grande ships berth bow to North.

On approaching the berth, approaching bow to or at any angle with the berth is to be avoided.

No. 1 Berth (Outer Berth): The ship will be put in a position parallel and abeam to the berth at a minimum distance of about 50 m. or more, depending upon the prevailing conditions of wind and current.

Once in this position and with the ship motionless or almost motionless, the Liaison Officer will assist you and the Official Pilot in the manoeuvres to nurse the ship alongside sideways with the tugs which, generally, will be alongside the ship's side opposite to the side the ship will berth, already made fast and ready to push.

When the manoeuvre is carried out for berthing to No. 1 or Outer Berth, the starboard anchor will be in cockbill position ready for use in case needs arise and in such case the aft tugs or both immediately ordered to pull on reverse.

It will be avoided to haul the mooring ropes secured to the North platform bollards in order to pull the vessel forward. If need arises the ship's engines may be used to move the ship.

8. *Unberthing:* The use of spring lines must be avoided in order to veer the ship on the mooring platform for clearing the vessel's bow or stern while unberthing. These spring lines will be only used in case of extreme emergency.

After all the mooring lines have been cast off, the ship will be towed sideways away from the berth to a distance where she can safely proceed under own power.

The Official Pilot for manoeuvres and Liaison Officer will disembark when the ship is safely free away and offering no risk to the dock.

Maraven will not permit berthing or unberthing without a Maraven Liaison Officer being onboard.

Note: According to new Port Regulations for unberthing, 2 Official Pilots will board; for unberthing manoeuvres and to conduct the vessel to the Outer Channel, respectively. The undocking Pilot disembarks at Bajo Grande.

9. *No. 2 Berth* (Inner Berth): The same procedure hereinbefore described for berthing at No. 1 Berth will be followed for berthing at No. 2 Berth. The ship will be put first parallel to the berth and then the vessel nursed alongside with the tugs. For unberthing, manoeuvres will be the reverse. During berthing and unberthing manoeuvres, ship's engine(s) will be used only when it becomes necessary.

At this berth anchors must not be used because of submarine pipelines laid there. In this berth the distance from it must not be more than 50 m.

10. *Emergency Towing-Off Wire:* Whilst berthed alongside the platform, emergency towing-off wire-ropes should be rigged both on the offshore bow and quarter of the ship, with their loops kept near the waterline at all times where the tugs can easily and quickly pick them up.

The wire-ropes should be in good condition and of suitable strength for the ship's size. The wires should be properly led outboard through the nearest fairleads leaving sufficient wire-rope coiled on deck and free to go when the tug hauls and of adequate length to tow her safely off the Terminal.

The overboard length of rope should be adjusted as the drafts decrease or increase.

11. *Mooring Lines Whilst at Berth:* Mooring lines should be periodically inspected and attended to ensure that they are kept taut in order to minimise and movement of the ship along or away from the berth.

In the case of ships equipped with automatic tension winches, the brakes of the winches should be applied and the mooring lines handled on manual operation when required to take up slack or pull them taut.

12. *Safety Practices:* While the ship is lying at the Terminal the Master will ensure that all the safe practices in loading or discharging oil products and related operations are complied with on his ship and also ensure the maximum co-operation between the vessel's crew and the Terminal personnel in their mutual interests of safe and efficient operations.

DEVELOPMENTS: Maraven, S.A. is building a second jetty N.E. of the first jetty. It will be in service in 1987, and will accept vessels up to 80,000 d.w.t. (summer).

Other characteristics are:

(a) Capacity: One vessel only.
(b) Length: 1,114 ft.
(c) Max. Draft: 40 ft.
(d) Lighting System: Yellow lights (completely lighted); and flashing red light through the wharf.
(e) Loading Arms: 2 hydraulic loading arms of 10 in. and 1 for bunkering of 6 in.
(f) Cargo Facilities: Only black oils. Crude and fuels.
(g) Bunker Facilities: Intermediate bunker fuels, bunker fuel and marine gasoil.
(h) Loading Rate: Approx. 17,000 bbls./hr. for cargo.
(i) Fire-extinguisher System: Modern fire-extinguisher system has been set up to serve both jetties. Operates with water and foam or water only.

AUTHORITY: Maraven, S.A. – Bajo Grande Refinery, P.O.Box 93, Maracaibo, Venezuela 4033A. *Tel:* (061) 202673. *Telex:* 61254, 61161. *Contact:* Mr. Adriel Fernandez, Terminal Supervisor.

(2) **OPERATORS:** Maraven, S.A.

LOCATION: S.W. of channel buoys B – 87 and B – 88.

The installations for processing natural gas liquids at Bajo Grande processes liquids for Maraven, S.A., and they are known as Product Owners. The Plant is situated in Bajo Grande, approximately 10 miles to the South of the Port of Maracaibo, on the West bank of Maracaibo Lake.

FLAG: The local authorities require the Venezuelan flag to be hoisted to the top of the vessel's mast from the time it enters the outer channel on arrival, until it leaves the outer channel on departure.

DOCUMENTS: *Customs Clearance for Programmed Vessels:*

Vessels which arrive in ballast or with cargo in transit, require the following documents (with additional file copies if these are required):

(A) Clearance from the last port
2 copies – 1 visaed Ballast Certificate
4 copies – 2 visaed Passenger List
4 copies – 2 visaed Lists of Equipment
4 copies – 2 visaed List of Passengers in Transit
4 copies – 2 visaed List of Mess Equipment and Spares
4 copies List of Personal Effects
4 copies – 2 visaed List of Stores
5 copies Crew Lists.

Vessels which arrive with cargo must have, apart from the foregoing:

(B) 4 copies – 2 visaed Venezuelan Entry Manifests
6 copies – 2 visaed Bill of Lading
2 copies visaed Entrance Manifests.

In the absence of a Venezuelan Consul at the last port, the Customs clearance documents must be signed by the Consul of a friendly nation, one of the Port Authorities, Notary Public, the Chamber of Commerce, or by two recognised signatories.

Clearance Through Customs of Diverted Vessels:

Vessels diverted on the high seas to Maracaibo to load at Bajo Grande must present all the documents indicated in (A) above, except the consular correspondence, which they will not have.

Vessels diverted on the high seas to Maracaibo (Bajo Grande) which do not have a Venezuelan Customs Clearance on board, must advise their Agents by radio prior to their arrival, the name of the vessel, the name of the Master, nationality of the vessel, net Venezuelan tonnage (if available, if not, the net registered tonnage), last port of discharge, port to which it was originally sailing and the ETA at the Pilot station at San Carlos. This information is required to obtain the Entry Permit prior to the arrival of the vessel. Three copies of the diversion telegram received by the vessel, signed by the Master, together with those documents detailed above, must be presented to the Port Authorities on arrival at Maracaibo. Non-presentation to the Port Authorities of the documents or the information mentioned will occasion a fine to the vessel.

Inspection by Customs: All vessels arriving from foreign ports destined for the dock at Bajo Grande must anchor in the Port of Maracaibo for Customs inspection by the Port Authorities before proceeding to Bajo Grande. The vessel's gangway must be in position prior to arrival at Maracaibo.

A member of the National Guard of Venezuela will come on board every vessel at Bajo Grande to observe the activities in connection with the operations of loading and unloading. This official is authorised as representative of Customs and is known as the "Vigilante de Aduana". He must be fed and lodged at the same standard as ship's officers.

Loading Documentation: The loading and Customs papers will be delivered to the Master by the Agent of the ship on his arrival at the Port of Maracaibo, on his voyage outwards.

PILOTAGE: Vessels entering currently have the option of taking on the official Pilot at:

(a) The channel in front of the pilot station at San Carlos, between the Buoys B – 24 and B – 26.

(b) In front of Amuay Bay or Punta Cardon. However, to arrange this service, Agents must be advised at least 48 hours in advance of this requirement.

The Pilot who boards the vessel in front of San Carlos will take it to Maracaibo, where he will disembark.

Due to weather conditions, the Port Captaincy of Maracaibo cannot guarantee the embarkation or disembarkation of the Pilots at the "EM" buoy. For this reason, Masters must communicate with the pilot station of San Carlos to receive necessary instructions as to where the Pilot will be embarked, the latter usually coming on board between Buoys B – 24 and B – 26. The system of communication between the pilot station of San Carlos and the vessels will be via radio-telephone. The San Carlos frequencies are: 2182 kHz. and 156.6 MHz. (VHF Channel 16). Other frequencies are: 2122 and 2080 kHz. and 156.8 MHz.

Pilotage to navigate through the inner and outer channels is compulsory at all times. The maximum speed of navigation in the dredged channels is 10 knots.

Vessels leaving will take the Lake Pilot on board at Bajo Grande and on reaching the port of Maracaibo the Pilot will be changed for another to take the vessel through the channel. The channel Pilot will pilot the vessel up to the San Carlos bank, generally between Towers E – 31 and E – 33, where he will disembark. The Port Captain of Maracaibo has issued instructions to all ships' Agents so that they may inform the Master and/or Owners of the vessels that all vessels must identify themselves with the pilot station of San Carlos by radio-telephone, regardless of the time of day, when they are entering between Buoys B – 17 and B – 19 and when they are leaving between Buoys T – 42 and T – 40.

Every time a launch with an official Pilot on board leaves to attend to a vessel in sight, the costs will be charged to the company which owns the vessel or to its representative, even when service has not been given.

A government Pilot will assist each vessel from Maracaibo to Bajo Grande and on the outbound trip to Maracaibo. The government Pilot will also assist in the berthing and unberthing operations. The ship's Agent will inform the Master of each vessel, as well as the government Pilot, the schedule for berthing the vessel.

The Plant Mooring Supervisor will board each vessel prior to approaching the dock. Mooring Supervisor will assist in the mooring and unmooring operations. It should be understood that the Mooring Supervisor acts only in an advisory capacity to the Master. The vessel's Master retains full responsibility at all times. The Plant assumes no responsibility in connection with any acts or advice given by the Mooring Supervisor.

APPROACHES: The buoy which marks the entrance to the outer channel (buoy "EM") is situated in approximately position 11° 13′ 47″ N., 71° 33′ 31″ W. The characteristics of the light of the "EM" buoy are: white flash every ten seconds, visibility approximately 5 miles. The distance between the "EM" buoy to the Southern extremity of the outer channel, marked by the Buoys B – 27 and B – 28, is approximately 15.75 miles. The channel is 1,000 ft. wide and normally has a depth of 42 ft. minimum at low tide observed at the time of neap tides with a tidal amplitude varying 2 ft. 3 in.

There is a breakwater 0.5 miles to the East of and parallel to the outer channel which extends 1.6 miles to the North from the Northern side of the Island of Zupara. The end of this breakwater is marked by a steel frame tower with a light 25 ft. above sea level. Characteristics of the light are: white flash every 8 seconds, visibility about 3 miles.

Commencement of the inner dredged channel is marked by the Buoys B – 29 and B – 30. The length of this channel, which is marked by buoys, is approximately 12 miles, and ends at Buoys T – 55 and T – 56. The channel is 800 ft. wide and the normal checked depth is 43 ft. neap tides with a tidal amplitude varying between 1.5 ft. to 2.5 ft.

The channel from the Buoys T – 56 as far as the port of Maracaibo is a dredged channel, whose end is marked by Buoys B – 73 and B – 74. It is some 800 ft. wide and has a depth of at least 43 ft. The distance is about 11 miles and the tidal amplitude range is insignificant.

RESTRICTIONS: Bridge clearance at MHHW 146 ft.

MAX. SIZE: The maximum permissible fresh water draft at the dock is 36 ft. and the maximum overall length vessel the dock will accept is 700 ft. Vessels with a berthing displacement up to 20,000 long tons will be accepted, providing the approach velocity can be controlled to 0.3 ft. per second or less.

Vessels with an overall length greater than 700 ft. or with a fresh water draft of more than 26 ft. or a displacement greater than 20,000 long tons will not be accepted for loading at Bajo Grande, unless they have obtained the prior authorisation of Maraven, S.A. If the vessel is not equipped to moor, load and unmoor in a safe manner, the vessel will not be loaded. In such cases, there will be no responsibility on the part of Maraven, S.A.

RADIO: Maraven, S.A. Export Department also has radio-telephones with the following frequencies: 2080, 2120, 2182 (stand-by), 2638 and 2738 kHz and 156.6 (stand-by) and 156.8 MHz. operated in accordance with the following schedule:

Monday – Friday:	From 0730 until 1130
	From 1300 until 1700
Saturday, Sunday and Holidays:	From 0730 until 1030 approx.

Any tanker or vessel bound for Bajo Grande shall cable Maraven, at least 5 days in advance of its scheduled arrival time in Maracaibo, giving notice of its estimated time of arrival, loading capacity, amount and type of product to be lifted and condition of ship's tanks.

At least 48 hours in advance of arrival at the San Carlos Pilot Station, the vessel's estimated time of arrival, nationality, Venezuelan net tonnage (if available, otherwise its registered tonnage), quantity and type of cargo required, condition of ship's tanks, name of Agent, last port, Master's name and all requirements of the vessel while in port should be cabled to "Maraven, Maracaibo" and to the ship's Agent. As the cable office in Maracaibo is not able to communicate directly with vessels at sea, messages to "Maraven, Maracaibo" and to Agent should be routed via PJC Curacao, and should be prefixed "Via AAC" (All America Cables and Radio Inc.). Failure to give such proper notices shall absolve the Plant from any claim for delays or demurrage.

TUGS: 2 tugs, each 1,600 h.p.; will be used for mooring and unmooring operations.

BERTHING: The dock proper may be identified by the overwater pipeline trestle that connects the dock with shore.

The dock is located approximately Lat. 10° 30′ N., Long. 71° 36′ W., which is 2 miles off shore from the Bajo Grande Natural Gas Liquids Processing Plant and S.W. of channel buoys B – 87 and B – 88 on the Maracaibo channel. The dock is single sided and consists of 4 breasting pilings, 4 mooring dolphins and a loading platform.

The dock is equipped with a compressor and auxiliary equipment to assist the ship in compressing and re-condensing the ship's vapours. No liability will be assumed by the Plant Operator for unavailability of the Dock's vapour compressor. The dock is also equipped with a vent system to dispose of contaminated vapours.

A tie-up crew will handle all mooring or pick-up lines before and after loading.

The Plant tie-up crew will assist the ship's crew in positioning and connecting the cargo loading arms and in removing same on completion of loading. The dock loading arms are equipped with 10 in. ASA 300 lb. RF flanges. It shall be the responsibility of the ship to furnish its own fittings to mate with the dock's 10 in. ASA 300 lb. FR flanges.

Mooring Procedure: Any vessels calling at Bajo Grande must be equipped with mooring hawsers of sufficient length and strength to run a line to each of the 2 bow and 2 stern mooring dolphins and shall use such equipment while at the dock. Vessels equipped with tension winches and cables shall utilise these in addition to the mooring hawsers or alone if the vessel has sufficient cables to meet the minimum requirements of running a cable to each of the bow and each of the stern mooring dolphins. For added security of those vessels not equipped with tension and/or cables, 1 steel cable will be furnished for a bow and another for a stern mooring dolphin by the Plant. It should be recognised by all parties that while the use of these cables is strongly recommended, the Plant accepts no responsibilities for loss or damage to any vessel or to any facility or to any person that may result from the failure of this equipment.

For the convenience and safety of all personnel boarding or disembarking while at Bajo Grande it is recommended that the vessel's accommodation ladder be rigged on the port side, this being the side normally laying against the dock. The ladder should be suspended after the Mooring Master boards and during docking operations to avoid being fouled.

BALLAST: There are installations for unloading dirty ballast. Vessels which arrive at Bajo Grande with dirty ballast must advise 48 hrs. in advance with regard to any emulsifiers, detergents or chemicals which may be present in the ballast and which are going to be unloaded. If these emulsifiers, detergents and chemicals are not acceptable, Maraven will advise the ship and the latter must arrive at Bajo Grande with clean ballast.

The ballast will be unloaded at a rate of approximately 5,000 bbls.p.h., nevertheless in the case of unexpected damage or malfunction of the system at Bajo Grande, Maraven will give instructions to the Master of the vessel so that he may arrive with clean ballast and Maraven will not be responsible for the delays which may be suffered by vessels in cleaning their tanks prior to arrival.

It is strictly prohibited to discharge into the lake any liquid or solid waste resulting from tank cleaning. Therefore it is recommended that the Master gives instructions to all personnel so that they avoid any possible leak or contamination in the lake.

In the event that the representative of the Plant or the National Guard observe that dirty ballast is being discharged into the lake, or even residues or other contaminatory organisms whilst clean ballast is being unloaded, such operations will immediately be suspended and the consequences will be strictly for the account of the ship.

LOADING: *Notice of Readiness:* On arrival at Bajo Grande and after inspection by the Customs Authorities, and having obtained any other official approval required before loading, the Master of the vessel will notify Maraven in writing that the vessel is ready to load. This notification must include a report of the conditions of the tanks of the vessel, specifying in detail the temperature, pressure, last loading, list of vessel and trim, possibility of contaminatory organisms and any other conditions which may affect the loading.

The Master of the vessel may request any equipment and/or service which he considers necessary for the safe and efficient loading of his vessel and Maraven will make every effort to fulfil this request.

It will be the responsibility of the vessel to provide its own connections to join up with the RF 10 in. 300 ASA flanges of the dock.

It will be the responsibility of the ship's Master to ensure that prior to commencement of loading, the atmosphere inside the tanks, which are to receive products are within the safety limits stipulated. Nevertheless, Maraven reserves the right to inspect at any time, to verify the fulfilment of these safety precautions and to refuse to load any vessel which in the opinion of Maraven does not fulfil the safety requirements stipulated.

LPG refrigerated vessels will not be considered ready to load at Bajo Grande unless all the LPG tanks contain LPG vapours and are sufficiently cooled to permit shipment of the nominated products.

Vessels which receive completely refrigerated products must be capable of receiving at their boiling point from 0.5 to 2.5 p.s.i.g. Such vessels must have a refrigeration system capable of liquefying all the vapours resulting from the shipment at the rate specified and including those vapours which form as a result of the heat gained by the vessels' tanks.

Loading Procedure: The positioning and connection of the loading arm must be effected to the satisfaction of the personnel in charge of the vessel. After approval of the personnel in charge of the vessel, the loading valves may be opened to check that the connections do not have leaks and loading may commence.

The maximum loading rate is 8,000 bbls.p.h. (750 – 775 tonnes p.h for completely refrigerated products and petrol) and a minimum loading rate of 250 bbls.p.h. (23 tonnes p.h.).

The pumps are designed to supply a minimum flow of 250 bbls.p.h. at a pressure of 225 p.s.i.g. and, since the installations at the Bajo Grande Dock do not have facilities for controlling the pressure of LPG which is being loaded, they are not responsible for any damage or delay which may occur due to the request for reduction in flow and pressure of LPG in order to cool or purge the vessel's tanks.

There are no installations for generation of inert gases. LPG vessels which require cooling, purging or any other assistance in Bajo Grande can be accepted after prior request in writing from the Master of the vessel; however, these services will be charged to the vessel. The responsibility for helping to effect purging and/or cooling is charged at 733 Bolivares per hour, during the time that such operation of purging or cooling causes the vessel to exceed the permitted period of stay.

The quantity of products used in such purging or cooling will be for the account of the vessel.

In the event that the dock vapour compressor is operated at the request of the vessel's Master for a purpose other than for purging or cooling, this will be charged at the rate of 500 Bolivares per hour to the ship.

All loading and unloading operations must be suspended whilst there is bad weather and the tank covers of the vessel must be closed and secured. During periods of calm, petrol or other products with a low flash point can be loaded at reduced rates or the loading operation can be interrupted if the heavy vapours are not being dispersed with sufficient speed to avoid dangers of gas accumulation. Officers on the vessel must be alerted so that they may be on watch whilst such conditions apply.

Under normal operational conditions it may be necessary to displace the loading line. This will require the person in charge of the vessel advising the representative of the Plant when the loading is nearing completion in order to complete an equal quantity to the capacity of the loading line.

Permitted Period of Stay: (a) The permitted period of stay, as is defined hereunder, shall commence to be counted from 6 hours after arrival of the vessel at Bajo Grande. The permitted period of stay will be terminated when the final mooring cable has been withdrawn from the quay.

For the purpose of these instructions, the Notice of Readiness, may be delivered after the vessel has tied up at the dock; nevertheless, the arrival at Bajo Grande shall be defined as the time when the vessel passes between Buoys B – 87 and B – 88, which mark the Maracaibo navigational channel and are situated approximately 1,000 m. in front of the Bajo Grande Dock.

(b) In the event that a vessel arrives at a different time to that confirmed in the shipping programme, and unless Maraven has approved a different arrival time, vessel must await mooring of other programmed vessels before arriving and which vessels may have arrived at that time and the permitted period of stay will commence when the loading operation commences, or 6 hours after receiving Notice of Readiness, whichever is the later. It is agreed that a vessel shall be included in the loading programme if it arrives at Bajo Grande between the hours of 12.01 hrs. on the accepted date and 0600 hrs. of the following day.

(c) Except for the provisions in (b) above, all vessels arriving at Bajo Grande will have the right to moor in the order in which they appear in the shipping programme. Maraven at their discretion may change the order of shipment when it may be necessary for reasons of safety or for the purpose of obviating a closure of the Plant or reduction in production.

(d) The waiting time permitted shall be 24 hours, plus one (1) hour for each 6,000 bbls. of product loaded in excess of 114,000 bbls. This waiting time shall be that permitted to load the complete cargo or part of the cargo of the vessel, it being understood that any time spent in deballasting operations will not be taken as waiting time. If the loading operations are delayed or interrupted by *force majeure*, which shall include the closure of the shipping terminal due to bad weather, the time thus lost will not be counted as permitted waiting time.

(e) The loading operations shall be considered as terminated when the loading hoses are disconnected. Every vessel will leave the quay as quickly as may be practically possible after having completed shipment of the cargo and the personnel of the vessel and those on land have arrived at an agreement as to the quantity of products shipped.

(f) In the event that a vessel is moored at the quay for 6 consecutive hours after Maraven has notified the Master of the ship that the installations are ready to deliver the product, if the vessel on completion of this time is not in a position to receive products, then at the discretion of Maraven the vessel may be withdrawn from the quay, to prevent the products burning or a reduction in production.

A vessel may be withdrawn from the quay at any time for reasons of safety.

Verification and Measurement: Determining factors to arrive at the official figures of a shipment:

(A) Petrol and Butane:

(1) Correction factors of the individual meters less than 1%. In this event the terminal shall always use the figures of the meters as official (and not take into account the absolute difference in barrels) taking always the precaution of carrying out a comparison between the figures of the ship and those of the land.

(2) Factor of correction in any of the meters greater than 1%. In this event the vessel's figures will be used, comparing them in all aspects with the figure of the meters without applying the correction factor and with the land tanks.

In those cases in which the vessel's figures are used, it is appropriate to suggest that they check their figures.

(3) In the event of the measuring system not operating, and the vessel cannot give its own figures, as a last recourse the figures of the shore tanks will be used.

(B) Propane:

(1) The vessel's figures will be taken proceeding in exactly the same way as in point (2) of sub-section (a) above.

(2) In the event that the vessel cannot supply figures, the figures of the shore tanks will be used.

All volumes will be adjusted to the volume equivalent to 60° F in accordance with the applicable sections of Standard API 2534 and the corresponding tables of the Measurement Tables of Oil ASTM (latest edition) or other methods or standards selected by Maraven.

If the product delivered is LPG, the content of the ship's tanks will include the quantity of the product in the form of vapour.

All volumes will be calculated in U.S. liquid barrels at 60° F and the adjustments at this temperature will be made in accordance with the Oil Measurement Tables ASTM – 1P, American Edition 1952 (or the ruling tables which may replace these).

In the event of the products being loaded in a vessel whose tanks, pipes and equipment are empty when loading commences, the gross volume of products which may remain in the pipes and equipment on completion of shipment and at the time of final measurement, shall be calculated on the basis of the volumetric capacity of those pipes and equipment, adding the calculated volume loaded in the vessel's tanks and including in the total volume delivered to and received by the vessel at that time. In the event that the procedure described is used to determine the volume of products delivered and if during the time of this delivery vapours from the vessel's tanks be vented then the quantity of vapours vented shall be determined as shall also be the liquid volume equivalent to these vapours in normal conditions and this will be added to the quantity determined in (a) and (b) above.

Permissible Composition of the Atmosphere of the Tank for Purging: Maximum percentage per volume of air or oxygen permissible for the safe shipment of the product when the vessel's tanks are purged with CO_2 or N_2:

	%Air		*%Oxygen*	
Product	(CO_2)	(N_2)	(CO_2)	(N_2)*
LPG	50	40	8	7
Petrol	50	40	8	7

*The percentages of nitrogen do not include the nitrogen of the air in the mixtures.

Example: If a vessel is going to load LPG and it is going to be purged with N_2, it must add sufficient N_2 to ensure that the mixture does not contain more than 40% by volume of air. The other 60% will be N_2.

Ref. Principles & Practices of Purging, 1954. American Gas Assoc. – Chapter 2, page 28.

FUEL: Heavy and medium marine diesel, intermediate fuel, and bunker "C" fuel oil are available in the area. Lubricating oils in limited quantities are also available from local contractors. All bunker, lubricating oils, water and other requirements should be cabled to the ship's Agent. For reasons of safety, no bunkers may be taken on the vessel while berthed at Bajo Grande.

FRESH WATER: Available at Maracaibo Harbour.

MEDICAL: Complete medical services are available in Maracaibo.

REPAIRS: Maracaibo: No major repair facilities are available, minor repair jobs can be taken care of through local machine and electrical shops. Shore labour can be furnished if required. Radio, radar and gyro compass technicians are available upon request.

Bajo Grande: No repair facilities are available, but when required, personnel from shops in Maracaibo will travel to Bajo Grande to effect repairs.

CONSULS: The following nations have Consular representation in Maracaibo:

Belgium
Chile
Colombia
Costa Rica
Denmark
Ecuador
El Salvador
France
Germany F.R.
Great Britain
Guatemala
Italy
Netherlands
Norway
Panama
Peru
Spain
Sweden
Switzerland
U.S.A.

SHORE LEAVE: Launch service for official business purposes and emergencies is readily available in Maracaibo. Launch service for shore leave can be arranged through contact marine service and will be the responsibility of ship's personnel. Arrangements for shore leave transportation can be made through the ship's Agent. No shore leave facilities are available at Bajo Grande.

CLASSIFICATION SOCIETIES: American Bureau of Shipping and Lloyd's Register of Shipping, U.S. Salvage Association, Salvage Association of London, Det Norske Veritas, Bureau Veritas, Registro Italiano Navale, and Germanischer Lloyd have Agents in Maracaibo. Surveyors are available by appointment from any of these Agents.

CURRENCY: The Venezuelan unit of currency is the Bolivar (Bs) and is the only currency recognised as legal tender within the country. Masters desiring a cash advance should make the request to their Agent when advising ETA.

MAIL: Outgoing mail for ship's account may be given to the Agent's representative who boards the vessel on arrival at Maracaibo inbound. Personal mail will be accepted only if carrying the correct amount of Venezuelan postage, or if postage is authorised by the Master for the vessel's account.

GENERAL: *Maracaibo Port Captaincy:* Directive which must be observed by vessels entering and leaving Maracaibo Lake:
OBJECTIVES:

To increase the safety of Human Life at Sea, to take all necessary measures to avoid marine accidents in general and to ensure that vessels are navigated with safety in the navigable channels and waters of Maracaibo Lake.

1. All radio-telephone communications between the Control Offices of Maritime Transit under the control of the Port Captaincy of Maracaibo and vessels, shall be made, for the first contact, via Channel 16 (156.8 MHz) and immediately it shall be agreed that for the transmission of required information they will change to Channels 12 or 14. Also this procedure will be adopted in communication from ship to ship.

2. Any vessel which navigates in the vicinity of the buoy "EM" of the outer channel being 10 miles from the latter shall call the pilot station at San Carlos, requesting permission to enter the zone and will supply the following information:
(a) Name and type of the vessel.
(b) Nationality.
(c) Draft.
(d) Last port of call
(e) ETA at the "EM" and "B – 26" buoys.

3. The Port Captaincy will authorise by radio, via the pilot station of San Carlos, to Masters of vessels who have reported to that station request to cross the outer channel, or part of it, with the assistance of the Official Pilot, in accordance with the sequence of arrival.

4. Every 5 miles, the Master of the vessel will call up San Carlos, indicating any information which he may have and giving his position within the channel, by reference to the buoys which are on his starboard side.

5. When communication in item 1 has occurred, San Carlos will inform the vessel as follows:
(a) The location of any dredger (mobile or stationary) which is operating in the outer channel, buoys whose lights are out, changes in buoys' positions or where buoys have disappeared, vessels which have sunk, etc.
(b) If there are vessels leaving the port, to give the position of these by reference to the odd numbered buoys.

6. Vessels shall establish radio-telephone communications with the dredger when they are 5 miles from it. In this communication, they will indicate the place they estimate that the vessel will meet the dredger and any other information which they consider necessary for the safety of navigation of both.

7. San Carlos will keep vessels informed of all the circumstances mentioned above, especially the time and place that each of them estimate to pass close to any dredger which is operating in the outer channel, and in order that they do not meet the dredger simultaneously.

8. Masters of vessels will inform the pilot station at San Carlos of any other information which the latter may request.

9. Masters of vessels will keep a watch on Channel 16, on the order of the Official Pilot, until their arrival at port of destination in Maracaibo Lake and on leaving until the Pilot has left the vessel.

10. Pilots, when they are bringing a vessel into the port, at the level of the parallel of Palmas del Norte Point (Buoys T – 55 and T – 56), will call up the Port Captaincy and transmit the following information:
(a) Name of vessel
(b) Time
(c) Port where operations will be effected
(d) Name of Pilot calling.

11. When the vessel continues to navigate to the South of General Rafael Urdaneta Bridge, the Pilot will inform the Control Office of Maritime Transit in Maracaibo, the time at which the vessel will pass Buoy "B – 79".

12. The average speed of vessel in the navigable channels will be ten (10) knots, Masters being authorised as are also Official Pilots, to alter this, when the safety of navigation may require it.

13. San Carlos will check by radio-telephone the transit of vessels from the entrance buoy "EM" to the level of the parallel which passes in front of Palmas del Norte Point (Buoys T – 55 and T – 56 and vice versa).

14. Loaded vessels navigating outwards, and being in the outer channel, will have priority over vessels coming in to the same channel, provided that these do not meet with those coming out in the critical zone, included between Buoys B – 21 and B – 22 and E – 33 and E – 34. For this purpose, the San Carlos Pilot Station will inform entering vessels the situation of leaving vessels so that they may take necessary measures to avoid meeting those vessels coming out in the referred zone.

15. The Port Captaincy will check via the office of Control of Maritime Transit, the Navigation of vessels, from the parallel passing Palmas del Norte Point (Buoys T – 55 and T – 56), as far as the terminals and ports to the South of General Rafael Urdaneta Bridge and vice versa.

16. Every Official Pilot navigating outwards when passing the Buoy B – 72, will call up San Carlos by radio-telephone and will supply the following information:
(a) The time that he is passing Buoy B – 72.
(b) The time that he is arriving at San Carlos.

17. When the dredger receives any call from a vessel it will give information as follows:
(a) Location where it is at that time.
(b) Direction of dredging (South North or North South).
(c) The side on which the vessel must pass.
(d) Time necessary to make the manoeuvre indicating on which side of the channel dredging will continue after the manoeuvre.

18. The pilot station at San Carlos will be attentive to all communications made and will take note of them, in the event that their intervention may be required by dredgers or by vessels.

19. Any vessel sailing from any port in the No. 2 pilotage area of Maracaibo, will inform the Port Captain as follows:
(a) Type and name of vessel.
(b) Where from and time of leaving the port.
(c) Speed and port of destination.
(d) Estimated time of passing Buoy B – 72.
Signed – Port Captain.

Section B

LA ESTACADA: 10.42 N. 71.32 W.

(N.B. For important details of Documentation, Pilotage, etc., see "Maracaibo Lake").

OPERATOR: Maraven, S.A.

LOCATION: Loading Terminal in the Lake of Maracaibo at La Estacada, located at Lat. 10° 42′ 30″ N., Long. 71° 31′ 40″ W. Entrance to and leaving this terminal is made between Buoys B-65 and B-66.

DOCUMENTS: As soon as vessel is safely moored Agents' representative will board the ship together with Port Authorities. The following documents are needed on arrival:

1. Clearance from last port with the following attached:
   Store List
   Crew List
   Slop Chest Inventory
   Ballast Certificate
2. Crew List (6 copies).
3. Store List (6 copies).
4. Slop Chest Inventory (Deck, engines and cabin store listed separately) (6 copies).
5. List of Personal Effects (6 copies).
6. Derat Exemption Certificate (original).
7. Venezuelan Net Tonnage Certificate (original).

See "Tonnage applicable".

The Health Officer sometimes requests to see the Vaccination Certificates of crew members.

PILOTAGE: (See "Maracaibo Lake"). Pilotage Compulsory.

1. All vessels must call Maraven, S.A. and Agent on VHF Channel 16, when passing the E.M. Buoy and when embarking the Pilot at San Carlos.

2. Reduce speed approaching Inner Channel Buoy B-63; rig accommodation ladder starboard side properly illuminated. Company Cargo Co-ordinator will board between B-63 and B-65.

3. Listen during transit on 2182 kHz and VHF Channel 16.

4. In event of unforeseen circumstances requiring vessels to anchor, area West of Estacada Northern Buoy mooring outside of channel limits will be used.

Vessels proceeding to La Estacada Terminal must enter the Outer Channel and embark the Government Pilot between Buoys B-25 and B-27. After vessel arrives in the vicinity of the E.M. Buoy, Master must contact San Carlos Pilot Station by radio-telephone on frequency 2182 kHz or VHF Channel 16 requesting Pilot between Buoys B-25 and B-27. *Caution:* Masters are warned to keep adequate speed in the Outer Channel even when embarking the Pilot as strong cross currents are encountered near San Carlos and Zapara Island. Pilot boats are fast and fitted with a flying bridge. Once the Pilot is on board the vessel will proceed to La Estacada, reducing speed in the vicinity of Inner Channel Buoys B-63 and B-65 where Maraven Cargo Co-ordinator will board. Accommodation ladder must be rigged up on starboard side.

MAX. SIZE: Water depth in both buoy moorings is 40 ft. mean monthly observed lowest water (MMOLW). Because of the depth of the surrounding approaches, 39 ft. (MMOLW), admissible mid-ships maximum draft in No. 1 is 35 ft. 06 in. freshwater (No. 2 berth is out of service). Under certain tidal conditions, however, with vessels over 60,000 d.w.t., it may be necessary to restrict loading to draft. Masters are requested to be guided by the Cargo Co-ordinator in appropriate draft be loaded.

Berth No. 1: Length up to 720 ft. Beam unlimited.

TUGS: Use of 2 tugs of at least 1,600 h.p. is compulsory for mooring and unmooring at La Estacada (Government Decree). Use of 2 mooring launches with crew including a diver, who inspects the submarine loading hoses, is compulsory at La Estacada. These mooring launches remain alongside ship during stay in berth order act in any emergency.

RADIO: *Information to be cabled to Agent, Maracaibo.*

Upon vessel's departure from the last port bound for La Estacada cable 72, 48 and 24 hours ETA at San Carlos Pilot Station, including in this message last port, Master's name, if A.C. current on board and any requirements. If diverted, cable original destination, also have 5 copies of diversion cable ready on arrival. If the vessel is nominated to load a part cargo only at La Estacada, indicate at which port cargo will be completed. All cables should be sent via PJC (Curacao Radio) and via ITT All American Cables.

A separate cable should be sent to Maraven, S.A. Maracaibo indicating ETA at San Carlos only.

BERTHING: *(a) Description:* Marine Oil Loading Terminal, is an off-shore installation and consists of two permanent buoy moorings, No. 1 to the South, and No. 2 to the North (out of service).

Berth No. 1 consists of 4×14 ft. cylindrical steel buoys, each fitted with a pelican hook to which ship's mooring lines are attached by contractor's mooring launches. On each buoy there are 2×1.625 in. improved plow steel wirelines to supplement mooring lines in order to provide additional security during strong winds. In Berth No. 1 the plow steel wires are 520 ft. long.

Ships moored heading North or South according to prevailing current.

(b) Deballasting: There are no facilities at La Estacada to receive and treat dirty ballast therefore *same must be clean.* All ballast is discharged ashore through a 16 in. line.

(c) Mooring: All ships should have an adequate supply of stoppers or other special equipment necessary to handle wires attached on mooring buoys. Vessels mooring in berths must be equipped with 4 ropes forward and 4 ropes aft. Vessels are cautioned that good quality ropes are essential and that they will be held liable for any damage occurring through improper or poor mooring ropes or inability to properly handle same.

Vessels in buoy moorings must have deck winches in readiness for use at all times. Method of berthing will be at discretion of the Government Pilot, as weather and other conditions permit.

During berthing and unberthing, ship's engines, tackle and all other gear must be in operative condition and in a state of readiness for use on immediate notice.

Weather permitting, and berths being available, vessels may be berthed at any hour of the day or night. Mooring buoys are properly lighted.

Government Pilots will assist in mooring the vessel in Berth. Loading hoses can be connected both port and starboard side, according to ship's position. The Company Cargo Co-ordinator will remain on board ship to advise on connecting and disconnecting loading hoses, and loading of cargo.

The Government Pilot will later unmoor the vessel and take her out to the channel for departure.

When ship is in position and mooring wires taut, mooring winches such as tension winches must have their manual brakes put on securely, and should not rely on automatic rendering devices.

During time vessel is at the berth, frequent and regular inspection of mooring essential to ensure that mooring lines are kept taut and that movement of ship is kept to a minimum. When tugs are alongside or assisting a tanker, all cargo openings, permanent ballast tanks, lids and pump-room doors must be closed no matter what grade oil is being or has been carried, unless these spaces are gas-free.

The mooring operations are carried out by 2 mooring launches and 2 tugs.

TANK INSPECTION: As soon as all ballast is discharged and hoses connected, production supervisor or cargo co-ordinator will inspect ship's tanks. If same are dry and clean he will sign corresponding certificate.

LOADING: Berth No. 1 has 1×24 in. loading line with the corresponding manifold. 12 in. – 150 lb. marine loading hoses are used. The berth is capable of a max. loading rate of 22,500 bbls.p.h., with an appropriate reduction for topping-off.

However, maximum loading rate entirely at Company's option and will vary according to circumstances and type of tanker concerned. When completing loading, stoppage of cargo will be determined on board, and Masters are requested to inform Cargo Co-ordinator at least 30 minutes in advance in order reduce pumping rate for topping-off. Cargo Co-ordinator will be in continuous contact with pumping station by means of portable radio. Should this means of communication fail, the following signals on ship's whistle will apply:

One long blast = Stand by
Two long blasts = Commence pumping
Three long blasts = Stop pumping

Upon completion of loading, Cargo Co-ordinator, together with ship's officer, will gauge ship's tanks and later prepare cargo documentation.

FUEL: Bunkers and marine fuels supplied by barge before or after loading operation at anchorage. Agent should be given prior notice.

FRESH WATER: Must be ordered with first ETA cable to Agents so that arrangement can be made with supplier. A water barge and a tug must be hired.

DENSITY: 997 – 1003.

REPAIRS: Only smaller repairs can be effected locally; however, technicians available for radio and radar repairs. Contact Agent.

SURVEYORS: American Bureau of Shipping and Lloyd's Register have Agents in Maracaibo.

CONSULS:

The following have consular representatives in Maracaibo:

- Belgium
- Chile
- Colombia
- Costa Rica
- Denmark
- Ecuador
- El Salvador
- France
- Germany F.R.
- Great Britain
- Guatemala
- Italy
- Mexico
- Netherlands
- Nicaragua
- Norway
- Panama
- Peru
- Spain
- Sweden
- Switzerland
- U.S.A.

SHORE LEAVE: Launch is primarily for use of authorities and company staff, but will effect trips for crew if required by Master. Contact Agent who will make necessary arrangements.

GUARDS: One National Guard stationed on board. He must be provided with sleeping quarters and seated in officers' mess for meals.

He is the representative of the Venezuelan Government and therefore any courtesy extended to him will be appreciated.

CLEARANCE: Immediately after termination of loading operations, hoses are disconnected and Government Pilot will proceed to unmoor vessel. In the meantime, cargo documents are prepared by Terminal personnel, and as soon as vessel is cleared, she will proceed to her destination.

CURRENT/TIDE: Current velocity max. 4 knots. Nature of bottom, mud. The tidal range in feet for the Estacada Terminal is Springs 1.5, Neaps 0.5.

GENERAL: *(a) Cash Advance:* Cash advance will be in local currency (Bolivares). Cable in advance any such requirements to Agents.

(b) Mail: Outgoing correspondence may be given to the marine dispatcher. For personal mail (crew) a list should be made, indicating name of crew member, quantity of letters and destinations, and handed to Agents.

(c) Ship Chandlers: 2 ship chandlers in Maracaibo who can supply vessels with fresh meat, fish, vegetables, fruits, etc. Requirements should be transmitted in first ETA cable to Agents.

TONNAGE APPLICABLE:

The Venezuelan Port Authorities base part of their pilotage charges on the size of the vessel, i.e. on registered net tonnage or on Venezuelan net tonnage.

On Registered Net Tonnage:

Venezuela will accept the tonnage of ships registered in countries with which they have a reciprocal tonnage agreement.

As of this date, such countries are:

- Denmark
- France
- Germany F.R.
- Ireland
- Netherlands
- Norway
- Portugal
- Sweden
- United Kingdom
- U.S.A.

On Venezuelan Net Tonnage:

Ships not registered in countries listed above, when calling at Venezuelan ports for the first time, must be measured for Venezuelan tonnage by the Captain of the Port. It is the usual practice to take ashore the ship's Panama Canal or Suez Canal Certificate, which is used as a basis for recalculating tonnage under the Venezuelan regulations, and return it before sailing. The Venezuelan admeasurement certificate, when later issued, is forwarded to the owners. A fee is charged for this certificate, which is payable only on the ship's first call.

AUTHORITY: Capitania De Puerto, La Ciega – Maracaibo, Venezuela. *Tel:* 226480, 226880. *Cables:* Caripuerto.

Section C

LA SALINA (Lacustre): 10.22 N. 71.28 W. **(See Plan)**

(N.B. For important details of Documentation, Pilotage, etc., see "Maracaibo Lake").

OPERATORS: All terminal facilities are under the control of Lagoven, S.A.

APPROACH: Entrance and leaving this terminal is made between buoys B – 97 and B – 98.

LOCATION: La Salina located on Eastern shore of Lake Maracaibo, in Lat. 10° 22′ 18″ N., Long. 71° 27′ 49″ W. about 60 miles from the entrance buoy "EM".

DOCUMENTS: These are generally placed on board prior to departure. Vessels whose Master accepts the early departure procedure may sail with documents in blank. Figures are then radioed for inclusion in blank documents. Outward clearance documents are placed on board the vessel prior to departure.

PILOTAGE: In the event that no contact can be made with San Carlos Pilotage Station, or if there is a language problem, contact should be made with Vensport, at La Salina by voice radio on VHF Channel 16 (156.6 MHz).

The Docking Master boards by tug or launch at the waiting anchorage or in the outer part of the navigation channel leading to the terminal.

ANCHORAGE: The waiting anchorage off La Salina is located immediately Eastward of buoys B – 97, AS – 1 and AS – 3 (Old numbers M – 1, M – 1a and S – 1); it has a depth of between 40 ft. and 41 ft. and fair to poor holding ground in soft mud.

RESTRICTIONS: None. The port is open for navigation during the day and night, allowing ships to enter and sail at any hour.

MAX. SIZE: Up to 112,000 d.w.t., LOA 900 ft. and max. draft 39 ft. (brackish water) at Berth Nos. 6N, 6S, 7N and 7S. Max. distance bow to manifold 450 ft.

Pier No. 3 (West Side) LOA 690 ft., draft 26 ft. and 36,000 d.w.t.
Pier No. 3 (East side) LOA 575 ft., draft 26 ft. Max. 18,000 d.w.t.
No restrictions on vessel's beam at any of the berths.
The access channel to La Salina has a least depth of 41 ft.

Special Note: Maximum draft for loading vessels at La Salina Lacustre Terminal is actually restricted to 39 ft. Vessels loading at this maximum draft of 39 ft. must cross the outer bar channel at HW.

RADIO: The cable and telegraphic address for the Lagoven, at La Salina is "Lagoven La Salina". Radio messages to and from ships at sea are routed through the Government radio station at Maiquetia (La Guaira) call letters YVG. This station operates on a 24 hour continuous watch on 500 kHz and 2182 kHz.

Listening frequencies: long wave: 500 kHz; medium wave 2182 kHz; short wave Channels 5 and 6.

Working frequencies: long wave 417 kHz and 464 kHz; medium wave 2120 kHz; short wave 4222 kHz, 6351.5 kHz, 8461 kHz and 17141.5 kHz.

Answering frequencies: long wave 500 kHz.; medium wave 2182 kHz.

Hours of watch:

4222, 6531.5 kHz	0100 – 1300 hrs. GMT
8461, 17141.5 kHz	1300 – 0100 hrs. GMT

Cables for vessels may also be routed via Curacao Radio, call sign PJC.

Radio notice of arrival should be sent 72 hours prior to arrival at La Salina and corrected if weather or other conditions delay the vessel.

Vensport La Salina handle all communications between vessels and Lagoven terminal control tower. VHF radio-telephone Channel 16 (156.6 MHz) may be used for initial contact. Channels 6, 10, 13 and 14 are also available on a 24 hour basis.

All vessels en route to La Salina may also communicate with Lagoven Amuay or Caripito Marine Offices and request that messages dealing with corrected ETAs, Pilots and other business be relayed to Vensport La Salina.

VHF: Transmit on VHF when passing Aruba or Amuay Bay updated ETA messages to either Lago Marine or Amuay Marine for relay to La Salina. Contact Vensport La Salina on VHF when within reach (normally after passing General Urdaneta Bridge) for latest berthing instructions.

TUGS: Lagoven S.A. maintains one 3,000 h.p. diesel tug and one 1,300 h.p. diesel tug. Tug-boat assistance is considered essential and is afforded to all vessels entering, leaving or shifting in the harbour.

Additional tugs can, in an emergency, be ordered from Maracaibo. The tugs are usually employed in the alongside mode and are made fast using their own ropes (2.5 in. diameter nylon).

BERTHING: At La Salina, Lagoven maintains a deep-water terminal (Lacustre) consisting of an island where are located 2 finger piers, each 1,100 ft. in length and 500 ft. between piers, providing 4 berths to accommodate tankers up to 112,000 d.w.t. Berths are numbered 6N, 6S, 7N and 7S, from North to South. At these berths various products can be loaded simultaneously namely – 6N and 6S – Crude, Naphtha and Butane; 7N and 7S – Crude; Pier No. 3 (West side), Propane and Butane; Pier No. 3 (East side), same as West side but not concurrently with West side. In addition there is an offshore platform (Pier No. 3) where liquefied petroleum gases (Butane and Propane) can be loaded.

Instructions concerning berthing are given by Vensport La Salina by means of radio-telephone.

The use of an anchor when docking is permitted at all berths. It is considered prudent to have the outboard anchor hove-out prior to entering the harbour in order to facilitate speedy release if necessary while docking. The Pilot will advise whether the ship is to be berthed port or starboard side to the dock.

The tugs are made fast on the seaward side, one forward and one aft. Vessels berth under normal circumstances always with head in, which is a relatively simple manoeuvre. Vessels are berthed starboard side alongside berths 6 North and 7 North; portside alongside at berths 6 South and 7 South.

When the vessel's bow is between two and three ships' lengths from the head of the pier, the engines are stopped or reversed. The vessel then slowly enters the berth parallel to and about 40 ft. from the continuous fender face. When the vessel's bow is just past the berth's manifold area, the forward spring line is sent in by heaving line. The vessel is then positioned by using its ropes and is pushed alongside by tugs. The current sets mostly in a general Northwesterly direction with a velocity between 0 and 2 knots. This should be taken into account, particularly when berthing at the South facing berths where the vessel may be set onto the pier.

Moorings: Mooring bollards spaced with 80 ft. intervals are located on both sides of the pier, and provide the basis for a potentially excellent mooring configuration consisting of:

3 Headlines
3 Sternlines
2 Breastlines
1 Forward, Spring line and
1 Aft Spring line.

BALLAST: Vessel should arrive at La Salina with sufficient ballast to permit safe handling. Government Pilot requirements in this connection under normal weather conditions are interpreted as drawing approximately 8 ft. forward, 18 ft. aft, on a T – 2 or similar type tanker, and 11 ft. forward, 20 ft. aft on a 26,000 d.w.t., on larger type vessels the minimum draft required is 14 ft. forward and 22 ft. aft.

Ballast should be carried in a minimum number of tanks, and all other tanks stripped, so as to minimise deballasting time.

It has been established that one of the major causes of contamination of crude oil is the relatively small amount of salt water remaining in the ship's tanks, pumps, and ballast lines after ballast discharge. This very small amount of salt, nevertheless, frequently results in costly damage and downtime to refining equipment, besides presenting many other processing problems.

It is therefore requested that the full co-operation of the Master and Officers of ships loading for Aruba, be given to ensure that all ballast tanks and lines are flushed with lake water and stripped as dry as possible.

Vessels equipped with a separate and completely segregated system of ballast tanks, lines and pumps, will be permitted to discharge ballast and load cargo simultaneously, providing approval of both the pier foreman and Petroleum Inspector is secured.

A pier supervisor who is in direct communication with the loading pumphouse is stationed at each pier during the entire time the vessel is discharging ballast or cargo or receiving cargo.

All dirty ballast must be discharged ashore. The terminal has a 100,000 bbl. reservoir connected to two high capacity separator units. Max. ballast discharge is 40,000 bbls./hr. with max. 130 p.s.i. at rail. One or two hard arms (12 in.) are usually connected for ballast discharge.

If it is desired to follow the "load-on-top" procedure it is requested that the marine representative be informed on arrival.

LOADING: Instructions as to grade or grades of cargo, and the approximate loading rate anticipated, will be given to the Master on arrival. Supplementary information including number and size of lines and Chicksan arms will be furnished to the Chief Officer before loading commences. Loading rates will be reduced as required when topping off.

If vessel's loading orders from owners or charterers do not agree with the terminal's orders, either as to grades or quantity, the marine representative should be advised immediately. The terminal is authorised to load 10% more or less than the quantity nominated.

A terminal employee is stationed at each pier during the entire time the ship is discharging ballast, bunkering, or loading cargo. Fifteen minutes "standby" notice should be given to this man prior to completion of ballast, bunkers, or cargo.

Shut-down controls for all crude oil pumps are available at each loading berth at ship's rail of loading vessels for use in case of emergency only.

LOADING RATES: Loading operations at La Salina Terminal are normally carried out at relatively high pumping rates; up to an average of 40,000 bbls.p.h. Ship's officer will be advised by the pier supervisor at what rate the cargo will be loaded. LPG is loaded up to an average max. rate of 7,500 bbls.p.h. at Platform No. 3.

During periods of calm, loading of gasoline or other similar low flash products may be at lower rates or loading stopped if the heavy vapours are not being dispersed quickly enough to prevent hazards from accumulated gas pockets. Ships' officers are cautioned to be on their guard during such conditions.

Loading rates will be reduced when topping off, if requested by the ship's officer.

Cargo Handling: The terminal is mainly a crude exporting facility, but also LPG, bunkers, condensate and gasoline are handled.

The cargo transfer facilities are:

Berth 6 North and South:
3 × 12 in. Chicksan arms for crude loading.
1 × 8 in. Chicksan arm for bunkers (located aft of manifold).
Berth 7 North:
4 × 12 in. Chicksan arms for crude loading.
1 × 8 in. Chicksan arm for bunkers (located aft of manifold).
Berth 7 South:
4 × 12 in. Chicksan arms for crude loading.
3 × 12 in. Chicksan arms for pressurised gas loading (located forward of crude loading manifold)
1 × 8 in. Chicksan arm for bunker (located aft of manifold).

Gasoline, condensate and pressurised butane are handled at Berth 6 at both sides of the manifold.

All connections are standard 150 ASA bolt hole flanges.

The emergency cargo stop button is located in the operators' shelter on both piers.

Crude loading rates up to 50,000 bbls./hr. can be provided.

The loading and discharging of all crude petroleum and its products will be stopped during the passage of an electric storm and ullage covers must be closed and dogged down.

Cautionary Advice: Whenever non-matching flange sizes necessitate the use of reducers (spool pieces), Masters should insist that the reducer or hard arm be adequately supported by a proper jack, and should refuse to let cargo transfer operations commence before a satisfactory vessel manifold and hard arm connection has been provided.

FIRE PRECAUTIONS: The recognised fire alarm signal is 4 long blasts with ship's or tug's whistle. An 8 in. fire water main line runs alongside all 4 berths with numerous double 2.5 in. outlets for connection to ship's hoses. Four elevated water/foam monitors are located on each pier providing relatively good fire fighting protection for the main deck area.

The 2 tugs are also equipped with elevated fire water/foam monitors, though on board foam storage capacity is relatively limited.

POLLUTION: There are no shore facilities to recover an oil spill. The Venezuelan authorities take a very serious view of oil pollution and heavy fines are imposed for violations of the strict pollution rules. A government representative is stationed at the terminal. It is therefore important that all precautionary measures be taken and spills avoided. In case of a spill, the port services section should be informed immediately by VHF or telephone, which is located on the pier. The use of dispersants or detergents on the water is not permitted

FRESH WATER: A limited supply of fresh and boiler water is available at La Salina Lacustre Terminal. Delivery is made through 2.5 in. National Standard Fire Hose Thread hydrants. Ship's personnel must provide hoses and connect up.

FUEL: Bunker C fuel oil, marine diesel and intermediate fuels are available at La Salina Terminal Lacustre. Delivery is made alongside Piers 6 or 7 by 8 in. diameter Chicksan hose, located about midships. *Loading Rates:* Bunker "C" and intermediate – 3,000 bbls.p.h. Diesel – 2,000 bbls.p.h.

It is the responsibility of the ship's engineer to give "stand-by" notice to the terminal employee and advise him when to shut down.

Supplies of lubricating oils in drums are available. Delivery will be effected while loading and requirements should be incorporated in the radio ETA.

DENSITY: The average density at the berth is 1002 but varies dependent upon amount of rainfall. The temperature ranges from 82°F. to 86°F.

MEDICAL: Complete medical, dental and hospitalisation facilities are available at La Salina. Medical treatment is provided at a private clinic.

Authorisation forms for medical treatment are provided which require the Master's signature. Transportation will be supplied by Vensport La Salina.

If the patient does not speak Spanish or English, an interpreter should accompany him.

REPAIRS: Vensport's Port Staff will assist with emergency repairs as may be required in each case depending upon availability of competent personnel and equipment. The company's shop facilities while not equipped for extensive ship repairs, may be made available to fabricate or repair items that are urgently required.

The nearest dry docks are those at Puerto Cabello and Curacao, N.A. Several contractors in the area provide labour for hull painting and for tank cleaning. Contracts for these services are made by the ship's Master directly with the contractor.

Radio technicians are available for minor repairs. With sufficient advance notice a radar specialist can be arranged to board the ship at La Salina.

CONSULS: The following countries have consular representatives in the area:

Belgium
Chile
Colombia
Costa Rica
Denmark
Dominican Rep.
Ecuador
El Salvador
France
Germany F.R.
Great Britain
Guatemala
Italy
Netherlands
Nicaragua
Norway
Panama
Peru
Spain
Sweden
Switzerland
U.S.A.

TIME: GMT minus 4 hours.

SHORE LEAVE: Shore leave is permitted and a representative of the Captain of the Port boards on arrival and issues the required number of passes. Shore passes are to be collected prior to sailing, and given to Pilot undocking the vessel. Vessels are not permitted to sail until all crew members are on board, unless hospitalised or prior arrangements made for disembarking. No launch service for liberty parties is available while vessel is anchored off La Salina awaiting berth.

GENERAL: Representatives of Vensport La Salina board vessels immediately on arrival, and it is particularly requested that Masters indicate at that time all ships' requirements. The office building is located at the Pier Head Trestle and personnel are available for assistance at all hours.

(a) Bonded Stores. Cigarettes or other stores in bond are not obtainable in La Salina.

(b) Cash Advances. Cash advances are made in local currency, the Venezuelan Bolivare. Cash requirements should be included in the radio ETA.

(c) Charts. On first arrival of each tanker, the Agency Dispatcher will furnish a set of local charts if required. No supplies of U.S. Hydrographic or British Admiralty charts, or sailing directions, are available.

(d) Classification Societies. American Bureau and Lloyd's Register have non-exclusive Agents in Maracaibo, and qualified Masters and Chief Engineers are available for appointment as Surveyors when required.

(e) Gangways. All vessels using the port of La Salina must provide a safe gangway. The use of rung ladders, pilot ladders, etc., is contrary to Port Regulations and Port Authorities will not board except by means of a safe gangway or accommodation ladder.

(f) Plimsoll Marks. The Captain of the Port requires that the Plimsoll Marks of all vessels using the port be clearly visible. Vessels may be checked on completion of loading, and if the Plimsoll Marks are not readily legible, permission to sail may be withheld.

(g) Port Services. On arrival at La Salina Terminal, a company representative boards vessels, so it is particularly requested that Masters make known to him all ship's requirements. Master should bear in mind that while vessels are within Venezuelan territorial waters, Government Authorities do not permit the use of ship's radio equipment. Cables and radiograms should be handed to the company representative for transmittal via shore radio communication system. La Salina also has radio telephone communication with North and South America and Europe. For further information contact Vensport in the terminal building, tel. 88491 and 88492.

(h) Rat-guards. By order of the Port Authorities, vessels are required to use ratguards on all mooring lines.

(i) Personnel – Seamen left ashore: In the case of seamen left ashore for hospitalisation, repatriation or other reason, documents and personal effects are to be delivered to the Vensport Office in La Salina before sailing. A letter is required from the Master advising maximum advances to be made to seamen if any, and instructions concerning repatriation. All expenses incurred by seamen left ashore, including cost of repatriation, are for ship's account.

It is important that Masters bear in mind that the Venezuelan law will at all times hold the vessel, her Master, Agent or Owner, responsible for any seamen left behind in Venezuela.

(j) Provisions and stores. Fresh and dry provisions are supplied by various Ship Chandlers in Maracaibo and Cabimas (La Salina). Master should deliver his signed requisition to the Vensport Office representative who boards on arrival. Provisions would then be delivered to the vessel while loading. The prices and quality of some items, such as fresh fruit, fish, shrimps, vegetables, etc., are competitive; dry stores are considerably higher than in most ports. The Fleet Steward will assist in filling requisitions. It is important that the Master sign the Ship Chandlers invoice as authorisation for the Marine Department to make settlement.

(k) Mail. Any pending ship's mail will be delivered on board by the Vensport Dispatcher on arrival at La Salina. At same time he will receive ship's mail to be dispatched. The Vensport Dispatcher will accept personal mail only if it carries the proper amount of Venezuelan postage, or if Master authorises the postage by signing 7 copies of the Company Postal Transmittal form. Masters interested in knowing the individual postage amounts to be paid by each crew member, should provide a list, in duplicate, of the senders, and number of letters sent by each one identified by a number written on each letter.

Copy of this list will be returned aboard the vessel when leaving this port outward bound. If not ready on time, it will be airmailed to the vessel's next port of call.

(l) Inspection of Petroleum Products and Crude Oil. Chas. Martin & Company and E. W. Saybolt petroleum inspectors are available if specified.

(m) Laundry. Laundry service is available between 0700 hrs. and 1700 hrs. on week-days. No guarantee can be given on time of delivery.

Section D

MARACAIBO: 10.42 N. 71.39 W.

On the N.W. shore of the Lake Maracaibo.

Maracaibo is the capital of the State of Zulia and seat of all Government and Consular Offices, as well as the port of entry for all vessels loading at one of the Terminals in the Lake of Maracaibo. (N.B. For information details of Documentation, Pilotage etc., see "Maracaibo Lake").

Also see "Shipmaster's Report" before Bajo Grande.

ANCHORAGE: The Pilot will not con the ship into the anchorage, but will indicate the proper location to anchor. Care should be taken because of small boats and ferry traffic.

ACCOMMODATION LADDER: Vessels must provide an accommodation ladder. The use of trunk ladders, pilot ladders, etc., is contrary to port regulations. Port Authorities will board only by means of an accommodation ladder. It is recommended to rig this in advance to avoid unnecessary delays.

BOARDING PARTY: The boarding party usually consists of the following persons: One Quarantine Official, Two Customs Officials, One Port Captain's Representative, Two representatives (Agent and Mooring Master).

RADIO: "Radio Marina" transmits information of interest to navigation every day from Monday to Friday from 1000 hrs. to 1015 hrs. and from 1600 hrs. to 1615 hrs. on frequency of 4,420.7 kHz in the 60 m. band, output 1 kW. All bunker, lubricating oils, water and other requirements should be included in the cable giving ETA of the vessel.

TUGS: Service not compulsory, assistance is rendered if required by the Harbour Master.

BERTHING: The manoeuvring area within Maracaibo harbour has a depth of 26 ft.

	Length	Depth alongside
Wharf No. 1	106 m.	15 ft.
„ „ 2	106 m.	15 ft.
„ „ 3	159 m.	15 ft.
„ „ 4	159 m.	22 ft.
„ „ 5	135 m.	25 ft.
„ „ 6	135 m.	26 ft.
„ „ 7	135 m.	26 ft.
„ „ 8	135 m.	26 ft.

FUEL: Heavy and medium marine diesel, intermediate fuel, and bunker "C" fuel oil are available at Maracaibo from local contractors with barges. Supplied only by barge at the wharves or anchorage. Lubricating oils are also available.

FRESH WATER: All wharves supplied with fresh water by 2 in. hoses. Rate 15/20 t.p.h. Fresh water also available from local contractors with barges.

MEDICAL: Complete medical services are available.

CONSULS:	Telephone		Telephone
Belgium	3235	Italy	—

STEVEDORES: Normal working hours 0700 – 1100; 1300 – 1700 and 1800 – 2300 hrs.

TELEPHONES: There is no service for connecting telephones on board vessels. Public telephones are situated in the warehouses adjacent to all wharves.

HOLIDAYS: All Sundays; 1st January; Good Thursday and Friday; 19th April; 1st May; 24th June; 5th July; 24th July; 12th October; 24th October; 18th November; 17th December; 25th December.

POLICE/FIRE/AMBULANCE: Police tel. 3821; Fire tel. 6585; Ambulance tel. 2209.

REPAIRS: No major repairs facilities are available; however, repair work can be done through local machine and electrical shops, and shore labour can be furnished if required. Radio and radar technicians are also available.

AIRPORT: International Airport "Granode Oro" situated N.W. of Maracaibo City served by many national and international airlines. A second airport with cargo and passenger services is situated at Santa Barbara del Zulia, on the banks of the Escalante River.

PROVISIONS: Fresh and dry provisions are available through ship chandlers in Maracaibo for delivery at Maracaibo Harbour or at the terminal.

SHORE LEAVE: Launch service in the Maracaibo harbour is readily available for official ship business. For personnel shore leave, depends on launch availabilities on arrival.

SHIPMASTER'S REPORT: 1976

Communication: Considerable difficulty was experienced raising La Guaira radio station (YVG) for transmitting the necessary ETAs. Our messages were transmitted via Portishead (GKR). Agents, however, advised that messages are normally transmitted through Curacao (PJC).

Pilotage: Masters making their first visit to the port are to embark the Pilot at Punta Cardon (Paraguana Peninsula). Ample notice must be given to the Agents as the Pilot has to be flown there from Maracaibo. Masters making their first visit to Maracaibo must also disembark the Pilot at Punta Cardon on departure. Masters may thereafter proceed directly to San Carlos pilot station.

Communications can be made through the Harbour Master's Office Punta Cardon.

Delays experienced off Punta Cardon did not occur on this particular occasion. Pilot boards and normally rests in the pilot's cabin until 30 minutes from the "EM" buoy.

Berthing: 2 tugs are compulsory for vessels berthing/unberthing when the vessel's length exceeds 476 ft. All other vessels 1 tug compulsory.

Stevedoring:

Normal working hours (Monday – Friday)	0700 to 1100 hrs.
	1300 to 1700 hrs.
	1800 to 2300 hrs. (Overtime)
(Saturday)	0700 to 1200 hrs.
(Sundays & Public Holidays)	*No work.*

Vessels must be fully rigged and hatches open and ready in all respects to load or discharge at least 15 minutes before stevedores arrive. If necessary shore labour is available to assist.

SHIPMASTER'S REPORT: 1975.

Arrival Messages: Cable Agent – Maracaibo via La Guaira Radio on departure Cristobal with ETA Punta Cardon, draft, cargo stowage, gangs required and requirements. (For subsequent calls vessel will be permitted to proceed to San Carlos pilot station to embark Pilot).

24 hours prior to arrival repeat ETA Punta Cardon, to be sent as described above.

2 hours before arrival at pilot station – Punta Cardon call on Channel 12 VHF to update time of arrival.

Pilotage: Pilot boards at Punta Cardon about 1 mile off the tanker berths from a launch with a "roof landing", therefore the pilot ladder must be about 6 ft. from the water. This Pilot travels from Maracaibo to meet the vessel at Punta Cardon and takes the vessel all the way to Maracaibo. Punta Cardon to "EM" Fairway Buoy – 78 miles. "EM" Buoy to Maracaibo – 35 miles.

Once the vessel has made a call at Maracaibo the Master is then exempt and may take his vessel direct to the "EM" Buoy and negotiate the buoyed channel for 12 miles to San Carlos Pilot Station. The channel is straight, wide and the buoys are well lit and marked. A Westerly set is said to prevail across this channel from the "EM" Buoy to San Carlos Pilot Station but it was not evident on our passage in or out. However, a strong ebb tide was noticed running out to sea off San Carlos Pilot Station. The channel from the "EM" Buoy to Maracaibo is dredged to 41 ft. but off the berths at Maracaibo the maximum draft is 26 ft. There had been a lot of unseasonal rain prior to our call and we noted that the density of the dock water was 1001.

Documents:

- 1 Health Declaration.
- 8 Stores Lists.
- 8 Crew Lists.
- 6 Passenger Lists (If no passengers these papers have to be entered as "Nil" passengers).
- 8 Crew Declaration Lists.
- 2 Venezuelan Manifests (Sent from N.Z.).
- 2 Sets Bills of Lading (Sent from N.Z.).
- 12 Sets Tally Books (Sent from N.Z.).

Stevedores: "Servicios Portuarios De Maracaibo".

They have 24 gangs in the port and mechanical equipment to support 16 gangs. Normal working hours are 0700 – 1130 and 1300 – 1630 hrs. Overtime 1800 – 2230 hrs. Saturday 0700 – 1200 hrs. No work on Sunday.

The labour works well but is not accustomed to working refrigerated ships and when the gangs work into the wings the Agent had to supply the men with warm clothing and hot coffee. Their discharge rate for cartons of frozen cream was 18 t.p.h. In hindsight I would suggest that it would be advisable to stow frozen cream for Maracaibo in a hatch square if possible to obviate the need for the labour to go into the wings as the complaint about the "cold" does not arise until this happens. They had 14 open trucks laid on to take the cartons of cream direct to the butter works and they had an unbroken flow so the "hook" was not held up on this account.

Berthing: There are berths for 6 ocean going ships and they say they can berth these ships up to 26 ft. Tugs are available and because of berthing starboard side to we used 2 tugs. The berths are concrete with rubber fenders and there is plenty of working space for the mechanical vehicles. The Pilots speak a little English but sufficient to make themselves understood and are capable. Fresh water is available alongside but I understand if bunkers are required they have to be brought by barge and there is a minimum charge of $1,000 irrespective of the amount of fuel required. They have a repair facility which is in the hands of a local engineering company. Fresh vegetables are available and can be recommended, supplied by the only providore. He maintains a listening watch on Channel 16 VHF and has a liaison with Agents for any messages sent prior to arrival at the berth. His station is called Automercado Venezia.

AGENT: Head Office, (Management and Control), Brokers, Chartering and Tramp Agents, Victor H. Selinger S.A., PO Box 1632, Caracas, 1010–A Venezuela. Cables "Selvic" or "Seltank". Tel. (02) 81.02.71 Telex: 21402, 21631, 21934 and 22859.

Local Office: PO Box 496, Maracaibo. Tel. (061) 224960. (061) 224962. Cables: "Seltank Maracaibo", or "Selvic Maracaibo". Telex: 62166.

OPERATOR: Petroquimica de Venezuela, S.A., (Pequiven) – El Tablazo, Apartado 159, Manejo de Productos, Maracaibo, Estado Zulia, Venezuela. *Tel:* 311-388. *Telex:* 23206. *Contact:* Captain Antonio Parcero.

PUERTO MIRANDA: 10.46 N. 71.34 W. (See Plan)

(N.B. For important details of documentation, Pilotage, etc., see "Maracaibo Lake").

LOCATION: Situated at Eastern shore of entrance to Lake of Maracaibo, in position Lat. 10° 46′ N., Long. 71° 34′ W.
OPERATOR: Maraven, S.A.

CLEARANCE: Pratique and Customs clearance will be granted on arrival either at the anchorage or after the vessel has been berthed. Masters therefore requested to have the accommodation ladder ready on arrival to avoid delays, since the Government Officials do not board the vessels by pilot ladder.

On arrival when Pratique is requested, all vessels should fly international flag signal "Q", or show a yellow light during hours of darkness.

PILOTAGE: On arrival Puerto Miranda under Government Pilot's advice the vessel will be boarded by Government Berthing Master, who will assist Master in docking vessel. He will also assist in undocking.
CHANNEL: Channel has a leading mark formed by the towers "P" and "M" and is marked by buoys.

1. (1) Incoming traffic bound for Puerto Miranda must leave the main channel between the buoys B – 57 and B – 59 towards the anchorage.
2. (2) Vessels coming from the Lake in ballast or to complete cargo at Puerto Miranda must leave the main channel when passing the buoy B – 65 on their starboard side and proceed in the direction of Jetty 3 towards the anchorage.
3. (3) All vessels on leaving Puerto Miranda should enter the main channel by the buoyed exit channel marked by the buoys numbered AP3, AP2, AP1 and B – 59.

Once the ship is unmoored, the Berthing Master on duty at Puerto Miranda will emphasise to the Official Pilots the route to be followed in each case.
MAX. SIZE: See "Berthing".
RADIO: Port Services Office equipped with radio-telephone installation operating on 24 hours basis, transmitting on following frequencies (simplex press to talk system).

		VHF Channel
Approach calling and safety	156.8 MHz	16
CSV and other tankers port operations	156.6 ,,	12
Emergency calling	2182 kHz	

BERTHING:

	70,000	x			7 (5)*	7 (5)*

Remarks: Alongside UKC for ships up to 700 ft. O.A.L. = 1 ft.
Alongside UKC for ships over 700 ft. O.A.L. = 2 ft.
(*) When vessels are fitted with tension winches – Forward and Aft.
(†) O.A.L. in Berth No. 3: This can be increased up to 620 ft. whenever vessels of Berth No. 1 have O.A.L. up to 665 ft.
(‡) O.A.L. in Berth No. 4: This can be increased only for LPG vessels up to 610 ft. if Berth No. 2 or 5 are empty when vessel arrives, then Berth No. 2 has to be temporarily restricted to vessels up to 665 ft. O.A.L.
General: Nature of bottom soft mud, but near buoys B – 59 and AP – 1 is partly hard.

Density of Water at Berths 997 – 1003.

Density of Water outer channel 1015 – 1025.

These alongside drafts are subject to reduction owing to depth in inner and outer channels.

Recommended under keel clearance (UKC) in Exit Channel 2 ft.

Vessels drawing 37 ft. and over will proceed according to monthly sailing draft table issued by Maraven, S.A.

ARRIVAL ADVICE: Vessels equipped with radio-telephone installation operating on above frequencies are requested call Puerto Miranda about 3 hours before arrival at port. Calls made in Spanish language will be answered promptly, since there is always a Spanish-speaking clerk on duty. Calls in English will be answered by Berthing Master on duty, except when he is occupied, in which case the call should be repeated later on, as an alternative, the Master could ask Government Pilot to report in Spanish his vessel to Puerto Miranda. During hours of darkness all vessels must identify themselves on arrival, either by radio-telephone or Aldis lamp.

TUGS: 2 motor tugs of 2,800 h.p. assist all vessels in docking and undocking. Also one or two mooring launches will be standing by to take ropes.

BALLAST: Discharge of oil or water polluted by oil into lake waters is prohibited and will incur heavy fines and compensation to beach owners and fishermen for cleaning nets.

All dirty ballast must be discharged ashore. Clean ballast in cargo tanks may only be pumped overboard after prior consultation with Port Services Dept. Deballasting line pressure must not exceed 100 p.s.i. Vessels equipped with a special separate and clean ballast system are to discharge their ballast into lake.

Ocean vessels should be ballasted on arrival E.M. Buoy for inward passage with minimum ballast necessary for safe handling, taking into consideration Article 31 of Maracaibo Pilotage Zone Regulations, which states all vessels entering lake Maracaibo shall have a trim of no more than 8 ft., to permit safe navigation through channels.

One of the major causes of contamination of crude oil is relatively small amount of salt water remaining in ship's tanks, pumps and ballast lines after ballast discharge. This very small amount of salt, nevertheless, frequently results in costly damage and down-time to refining equipment, besides presenting many other processing problems. It is therefore requested that full co-operation of Master and officers be given to ensure that all ballast tanks and lines are stripped as dry as possible.

MOORING: Vessels are to be moored to satisfaction of Pier Master. A suitable gangway will be provided by shore installation. When it is out of order vessel's gangway has to be used, which will be notified on VHF telephone before arrival at E.M. buoy.

Vessels of any deadweight must secure with at least: *Forward:* 4 headlines; 4 breasting fibre ropes in berths 1 and 2; 1 spring. *Aft:* 2 sternlines; 4 breasting fibre ropes and one spring in berths, 1 and 2. In berths 3, 4 and 5, *Forward:* 2 headlines; 4 breasting lines; 1 spring. *Aft:* 2 sternlines; 4 breasting lines; 1 spring.

When vessel is fitted with tension winches (forward and aft) the following ropes are required:
Forward: 2 headlines; 2 wires from tension winches as breasting lines in berths numbered 1, 2, 5 or 6; 1 spring. *Aft:* 2 sternlines; 2 wires from tension winches as breasting lines in berths numbered 1, 2, 5 or 6; 1 spring.

When vessels are nominated to load at berth 1 or 2 of Jetty 2 one extra headline and a second spring is required. Vessel's best ropes or wires should be used as breasting lines.

LOADING: Vessels should load in accordance with International Load Lines Regulations taking into account maximum permissible draft at this Terminal and also at Maracaibo Bar Channel.

The Captain of the Port requires that the load-line marks of all vessels using the port be clearly visible. If Harbour Authorities should refuse to pilot an out-going vessel due to being overloaded, Master will be held responsible for all delays and expenses, in connection with discharging any overloaded cargo and all further losses.

Vessels' maximum permitted loading rate should always be required. Maximum shore loading rate is 7,000 tonnes per hour, using 2 shore lines and 4 hoses.

Following ship's whistle signals should be used for loading:
2 blasts = Stand by (15 minutes prior to completion of cargo and or part cargo). 1 blast = Stop (2 minutes prior to complete cargo and or part cargo).

BALLAST: *Tank cleaning and dirty ballast facilities:* Maximum quantity acceptable, no limit. Rate 4,000 t.p.h. Owing to the closeness of the fishing industry to this terminal, Masters are warned that heavy fines will be imposed for polluting the Lake waters. Cargo-tank ballast whether clean or dirty has to be discharged ashore. Segregated ballast might be discharged into the Lake.

The terminal only accepts ship's ballast up to a maximum of 25% of vessel's deadweight. Masters are therefore advised to deballast at sea to the appropriate level.

EMERGENCIES: In order to deal quickly and efficiently with any emergency during loading/deballasting operations, the following equipment is available:

(a) Control for quick closing of shore manifold valves. This is a red-painted hydraulic valve situated on the ship/shore gangway. In the event of a spillage aboard, this valve must be opened. Within 90 seconds the shore manifold valves will close against the loading pumps.

(b) Direct ship/shore telephone. This is a red telephone and in order to obtain instant communication with the Loading Supervisor in the Control Room it is only necessary to lift the receiver. An Alarm Bell will alert the Supervisor and a light will advise him from which berth the call originated.

FUEL: Available ex-wharf: Bunker "C", thin fuels from 200 to 3,500 seconds Redwood 1 at 100°F., and marine diesel. Delivery rate 400 and 80 tons respectively. Gas oil, fuel oil and thin fuels may be supplied by barge ex-Maracaibo delivered at anchor, at a max. rate of 110 and 140 tons.

FRESH WATER: Available on all jetties with a loading rate between 20 t.p.h. and 30 t.p.h. This depends on number of vessels at the same time.

MEDICAL: Ship's personnel may visit local doctor on week-days between 0700 and 1130 hrs., or 1400 and 1700 hrs. Outside these hours, or in cases which require special treatment, patients receive attention in Maracaibo. Written request for medical attendance, as well as a shore pass, is always required.

CUSTOMS: 1 opened packet of cigarettes allowed to be taken from vessel by each crew member when going ashore. Masters advised to strongly caution crew against attempted smuggling.

SHORE LEAVE: Not granted until shore passes are stamped and signed by Authorities. Passes must be shown to guards at gangway and gates. Crew members must be properly dressed (long trousers and shirt) before proceeding ashore. Master must collect all passes and return them to Agent before vessel's departure.

GENERAL: *(a) Tides:* In view of the available depth in the channels which allow navigation to vessels up to about 70,000 d.w.t. fully laden at high water, permanent predictions of sailing draft tables have been prepared by Maraven S.A., and they will send these on board ships of over 47,000 d.w.t.

(b) Currents: The tidal current (Lunar tide) at this port can at times be very strong and subject to changes. Usually outgoing tide runs for 7 to 8 hours against 4 to 5 hours for incoming tide. Direction approx. at right angles to jetty.

(c) Movement of Passengers: Embarkation or disembarkation of passengers through this port is not allowed by Venezuelan Law, as this Terminal is only authorised by the Treasury Ministry (Ministerio de Hacienda) exclusively for exporting crude oil.

(d) Short Dispatch Procedure: This procedure is available for ships loading cargoes consigned to Shell Companies.

(e) Failure to Rejoin Vessel: If any member of crew is not aboard at sailing time, Authorities will not clear vessel although permission may be given to proceed to anchorage if the berth is required. If sailing permission is granted, Master is required to sign letter accepting all costs in connection with missing crew member to be for Owner's account.

(f) Launch Service: A charge will be made for a round trip to Maracaibo, but launches are only available on written request by Master. Masters who have to go on business to Maracaibo (Agency or Consulates) can make use of public service launches.

(g) Proceeding to Cardon: Vessels proceeding to Cardon to load or to take bunkers, are required to have ready on arrival at Cardon:

4 Lists of Deck and Engine Stores and Spares.
4 Lists of Stewards Stores.
6 Lists of Personal Effects.
6 Crew Lists.

In order to prevent delays it is imperative that these documents are presented to the Port Officials when they board to clear the vessel.

(h) Loading for Curacao: Unless Master requests otherwise, arrangements will be made for Goverment Pilot to board ship 1 hour after vessel has signalled "Stand-by".

(i) Guards: Custom Guards (Guardia Nacional) will be posted on all vessels and Masters are reminded that these guards must be accommodated and treated in the same manner as ships' officers. Non-compliance entails not only a fine but will result in delays in clearance and cargo operations.

(j) Visitors: Only persons on business allowed on piers. Visitors, as guest of Master, allowed board vessels provided a written and signed request presented by Master to Port Services Department. Further particulars covering procedure for obtaining permits for visitors can be obtained from Port Services Office.

(k) Cables and mail: Crew mail list forms put on board all vessels when entering Puerto Miranda. Crew's private mail accepted for posting provided all letters bear the sender's name and a list in duplicate is prepared showing addresses and sender. 1 copy of list will be forwarded to Master showing individual charges. Cables can be dispatched at all times.

(l) Norwegian Government Seamen Service: A field representative of the above service is stationed at Puerto Miranda providing Norwegian and Swedish film exchange and other usual services.

(m) Charts – Nautical Publications: On arrival of each tanker the Agency Representative will furnish a set of lake charts if required. No supplies of U.S. Hydrographic or British Admiralty charts or Sailing Directions, Nautical Almanac, etc., are available at this port.

(n) American Crew List: Vessels sailing for U.S. ports requested have American Crew List ready on arrival, so it can be forwarded to U.S. Consulate without delay.

(o) Films Exchange: Films may be exchanged at this Terminal.

(p) Fire Alarm: Each Friday morning at 1000 hrs. there will be a test of fire alarms including sirens at the wharves. Before the test will be a warning message in English and Spanish.

(q) Cash Advances: Local currency is Venezuelan Bolivar and cash advances are made only in this currency. It is requested that any requirement for cash advances be included in vessel's ETA radio, to permit delivery on board on arrival.

REGULATIONS: Following regulations should be strictly observed by Master of vessels alongside jetties. Non-compliance with these instructions entails not only a fine but delays in cargo operations.

Use of rafts for painting the ship's sides is strictly prohibited.

Lifeboats should not be lowered without the special permission of the Government Port Captaincy (obtainable on request).

Swimming in the harbour is strictly prohibited.

Waste water, sanitary or other must not be discharged on jetty.

It is strictly prohibited to paint ship's name or others on jetties. When this occurs the vessel will be charged for the cleaning.

Painting in ships alongside is strictly prohibited.

Before commencing loading, all dock scuppers should be securely plugged.

It is necessary to keep a close and constant watch on moorings and to adjust when necessary. When adjusting, call for assistance of harbour tugs before slackening off any mooring lines.

TELEPHONES:

Section F

PUNTA DE PALMAS: 10.24 N. 71.34 W. (See Plan)

(N.B. For important details of Documentation, Pilotage, etc., see "Maracaibo Lake".)

OPERATORS: Maraven, S.A.

FLAG: The Authorities require the Venezuelan flag to be flown from the mast head from the time the vessel enters the outer channel to come into the port until it leaves again by the same channel.

LOCATION: The terminal is located at Punta de Palmas del Sur, approximately 13 miles South of the port of Maracaibo on the West shore of Lake Maracaibo. The terminal proper may be identified by a 300 ft. radio tower, having 2 small red lights 200 ft. from the base, and 1 large red light on top of tower. The top light flashes every 2 seconds.

PILOTAGE: Vessels which arrive have the option of taking on the Official Pilot at the following places:

(a) In the outer channel of the Lake of Maracaibo, between buoys B-24 and B-26.

(b) In the anchorage area, located approximately 5.5 miles to the N.E. of the Island of San Carlos and to the East of the buoy B-17. This area is identified by a green light buoy, equipped with a radar reflector (position: Lat. 11° 04′ 22″ N., Long. 71° 33′ 48″ W.).

(c) On the "EM" buoy (i.e. Entrance to Maracaibo), there is also a radar reflector (position: Lat. 11° 13′ 47″ N., Long. 71° 33′ 31″ W.).

The Official Pilot who comes on board at San Carlos will take the vessel to Maracaibo. At times, due to bad weather, the Maracaibo Port Captaincy cannot guarantee the embarkation or disembarkation of Pilots at the "EM" buoy or in the anchorage at Lat. 11° 04′ 22″ N., Long. 71° 33′ 48″ W. For this reason, Masters must contact the pilots station at San Carlos so that they may give him appropriate instructions as to the place of boarding or disembarkation of the Official Pilot, who, generally speaking embarks between buoys B-24 and B-26.

The system of communications which vessels use with the pilots station of San Carlos will be the morse lamp, radio-telephone or radio.

The frequencies on which San Carlos listens out are: Radio 2182 kHz. Radio-telephone 156.6 MHz. It also operates with frequencies 2080, 2120, 2638, 2738 kHz R/T and 156.8 MHz VHF.

Vessels sailing from Punta de Palmas will take on the Official Pilot at the mooring where they are located after having terminated their loading operations. This Pilot must be requested one hour and forty-five minutes before the estimated time of being ready to sail. Vessels which embark their Official Pilot at Punta de Palmas to sail to Maracaibo will change their Pilot again on arriving at that port. The Pilot who embarks will guide the vessel to the proximities of the Island of San Carlos, between the towers E-31 and E-33, where he will disembark onto a pilot launch. The Port Captaincy of Maracaibo has given instructions to shipping Agents for the purpose of informing Masters and Owners of vessels that every Master must identify himself in advance to the pilot station at San Carlos at any time of the day, when they are arriving at buoys B-17 and B-19, and when they are sailing at T-42 and T-40. These instructions are of an obligatory nature in order to keep the Pilots' service informed at all times of any emergency that may arise. Also to avoid an Official Pilot going out unnecessarily from his base, especially during the night in the belief that the vessel which is in sight requires his services; in this case both the service of the launch and that of the Pilotage not given will be charged to the ship's Agent or Representative.

Lake Pilotage: An Official Government Pilot will assist every ship in crossing from Maracaibo to Punta de Palmas and in its exit voyage from Punta de Palmas to Maracaibo. This Pilot will also assist in the operations of mooring and unmooring. The Agent will inform the Master and the Official Pilot of the time determined for berthing the vessel when it arrives at Maracaibo. Vessels which load in Punta de Palmas must request a Pilot for their exit journey at least 1 hour 45 minutes in advance of the time at which they consider the vessel will sail.

CARGO DOCUMENTS: Vessel's clearance and cargo papers will be delivered to the Master on arrival in Maracaibo Harbour outbound. Maraven will accept no responsibility for delay in clearing a vessel due to unavailability of personnel from offices of the Port Authorities.

APPROACHES: The buoy which indicates the entrance to the outer channel ("EM" buoy) is located in the geographical position: Lat. 11° 13′ 47″ N., Long. 71° 33′ 31″ W. The light of the "EM" buoy has the following characteristics: white light, with 1 flash every 10 seconds, visibility approximately 5 miles. The distance between the "EM" buoy and the inner extremity (South) of the inner channel, marked with buoys B-27 and B-28 is approximately 15.75 miles. The outer channel has a width of 300 m. between the limit on both sides. The navigable portion for loaded vessels is 240 m. wide. The average depth which has been checked at low tide is 13.72 m. (45 ft.) and the tidal amplitude is up to a maximum of 1.49 m. (4.9 ft.). There is a breakwater located a half a mile to the East and parallel to the external channel which extends for 2,574 m. (1.6 miles) to the North from the Northern coast of the Island of Zapara. In its outer extremity there is installed the lighthouse of the steel lattice type construction, with a height of 7.62 m. (25 ft.). The characteristics of its light are: white, with 1 flash every 8 seconds, visibility approximately 5,556 m. (3 miles).

The commencement of the internal dredged channel is marked by buoys B-29 and B-30. The extension of this channel is 19.31 km. (12 miles) approximately and ends at towers T-55 and T-56. The channel is 244 m. (800 ft.) wide and its normal checked depth is 13.72 m. (45 ft.) at average low tide, with a tidal amplitude which varies between 0.49 m. and 0.89 m. (1.5 ft. and 3 ft.), at tower T-66, and from 0.82 m. to 1.46 m. (4.5 ft.) at buoy B-29.

The channel from tower T-56 as far as the Port of Maracaibo is dredged and its termination is marked by buoys B-73 and B-74. It is 244 m. (800 ft.) wide and has a depth of 13.72 m. (45 ft.). Its distance is 17 km. (11 miles).

The depth in all the channels may vary in accordance with the sedimentation to which they are subjected and the formation of sand banks. The Port Captaincy at Maracaibo issues Notices to Mariners keeping them informed as to changes in depths in the channels. Navigators are advised to keep themselves up-to-date with these notices of variations of depth when they calculate their exit draft of their respective vessels.

MAX. SIZE:

Berth	*Max. LOA*	*Max. Draft*	*Max. d.w.t.*
No. 1	835 ft.	38 ft.	80,000 tons
No. 2	835 ft.	37 ft. 6 in.	80,000 tons
No. 3	890 ft.	42 ft.	100,000 tons

Also see "Berthing".

RADIO: *Time of Arrival (ETA):* When a vessel leaves its previous port destined for the Terminal of Punta de Palmas, it must inform both its Agent and Maraven S.A. in Maracaibo as to its best estimate of the date and time of arrival in Maracaibo. Then at least 24 hours prior to arrival at the San Carlos pilots' station, it must send another message to confirm the time of arrival at Maracaibo. The nationality of the vessel, name, nett Venezuelan tonnage (if it does not have this, its registered tonnage), last port, name of Master, permanent ballast or cargo in tanks or both, and any other information which is pertinent must be included in this message. The cable address of Maraven S.A. is as follows: Maraven, Maracaibo, Telex 61126. By virtue of the circumstances that the Cable Office in Maracaibo is not equipped to communicate with vessels on the high seas directly, messages sent to Maraven S.A. and to the Agent of the vessel must be transmitted through "PJC" (Curacao), with the prefix "Via ACC" (All American Cables and Radio, Inc.).

We wish to emphasise that by virtue of the fact that our undertaking rents a part of its equipment which it uses for mooring vessels in accordance with the last message of arrival of the vessel, this message must be compiled with the greatest accuracy possible. Any alteration in the time and date of arrival affecting the vessel before or after the time indicated in its message, will be for the account of the vessel as will be the cost of rental of the equipment used.

Maraven S.A. is in no way obligated to carry out the mooring of any vessel, except at the estimated time of its arrival at Punta de Palmas, although exception is made where the vessel may have been delayed in Maracaibo by virture of reasons beyond the control of the Master.

TUGS: Tug service consisting of 2 tugs of not less than 1,600 h.p. each is provided by the terminal operator for all vessels. Both tugs will assist all vessels in mooring and unmooring operations. Should it be deemed necessary by the terminal operator to require a tug in addition to the 2 terminal tugs for mooring or unmooring vessels exceeding 750 ft. in length, charges for this additional service will be for the account of vessel.

Vessels which exceed 835 ft. overall length, and destined for Berth No. 3, require the assistance of at least an additional tug. This additional tug will remain at the convenience of the Terminal for the time that the vessel remains at the berth.

In all cases where there are adverse weather conditions, without taking into account the size of the vessel, the Operator of the Terminal, at his convenience, may request the services of an additional tug to protect the installations of the Terminal and the ship, which will be for the account of the vessel.

The Terminal Department will make the necessary arrangements through the intermediary of the ship's Agent, for contracting additional tugs. These services will be charged to the ship's Agent by the tug operator who is contracted.

MOORING: *Berth No. 1:* Located approximately 8.85 km. (5.5 miles) from the Terminal and 2 km. (1.25 miles) to the West of buoys D-95 and D-96 in the Maracaibo Channel. Distance between the bow and stern buoys is 364.90 m. (1,200 ft.).

This berth is equipped, apart from the mooring buoys, with a transversal mooring pile on its Eastern side, submerged, with chain and cable the same as those of the buoys. This does not interfere with the operations of mooring and unmooring.

Berth No. 2: Located approximately 8.85 km. (5.5 miles) from the Terminal and 2 km. (1.25 miles) to the East of the buoys D-95 and D-96 and to the N.E. of berth No. 1. Distance between the bow and stern buoys is 350.50 m. (1,150 ft.).

This berth is equipped, apart from the mooring buoys with a transversal submerged mooring pile equal to that of berth No. 1.

Berth No. 3: Located approximately 9.65 km. (6 miles) from the Terminal, 1.2 km. (0.75 mile) to the West of the buoys D-95 and D-96 and approximately 914 m. (3,000 ft.) to the East of berth No. 2. Distance between the bow and stern buoys is 365.76 m. (1,200 ft.).

This berth is equipped similarly to berths Nos. 1 & 2 with a transversal submerged pile on the Western side of the berth.

Conditions applicable to all berths: (a) Vessels which have a total overall length of 239.26 m. (785 ft.) or more must be equipped with 2 tension capstans at the bow and on the after deck, with sufficient cable to reach the stern and bow buoys respectively.

(b) Every vessel loading at any of the berths must take into consideration that due to Government regulations, the vessel must have a minimum clearance of 0.984 m. (3 ft.) below the keel at any point during its transit through the Maracaibo Channel, without taking into account the limitations of the channel assigned to the 3 berths by the Terminal Operator. In view of this regulation and the constant variations of the depths of the channel, Masters must be guided by the most recent "Depth Bulletins" which are issued by the National Channel Institute, and by the tide tables when they are planning their transit time through the channel, and the maximum draft to which they may load their vessel.

Mooring procedures and rules applicable to mooring points: Every vessel carrying out mooring operations at any of the 3 berths must arrive with a minimum draft of 3.65 m. (12 ft.) forward and respect the following procedure and rules for berthing:

(a) Anchor: Vessels approaching the berths from the East, in the most convenient manner and safely as possible they must drop their starboard anchor in its location once the vessel has been berthed, the chain facing East, with a length of not less than 137.16 m. (450 ft.).

(b) Mooring cables: One of the following alternatives for mooring cables at each side of the vessel must be fulfilled:

1. Two cables of synthetic fibre (Nylon or Polypropylene) with 9 in. circumference and 1 steel cable which has a minimum diameter of 1.25 in.
2. One cable of synthetic fibre (Nylon or Polypropylene) with 9 in. circumference and 2 steel cables also supplied by the vessel and which have a minimum diameter of 1.25 in.
3. One cable of synthetic fibre with a 9 in. circumference and a safety cable of 1.5 in. diameter which will be supplied by the Terminal.

(c) Countertension cables: A countertension cable will be attached to the stern or fore deck. Vessels which have a length exceeding 800 ft. must use countertension cables on both sides of the deck simultaneously.

(d) Transversal cable: The transversal cable which will be supplied by the Terminal will be attached to the after deck on the starboard side. Vessels mooring at berth No. 3 must also attach an additional transversal cable to the after deck on the port side.

(e) All cables which are attached to vessels must have 6 turns around the bitts, and these must be secured so as to prevent them from unwinding.

(f) The pressure capstans must be secured in the braked position, once all other cables for mooring the vessel have been secured. These mooring cables must be maintained tight as the vessel goes down in the water whilst it is being loaded.

(g) Vessels must be supplied with sufficient cables as spares which can be used as the Terminal may require. All cables must be maintained in good condition and are subject to acceptance by the representative of the Terminal. Vessels must maintain sufficient personnel on deck during the whole time that the vessel is at the berth to attend to the cables for mooring purposes whenever this may be required by the Terminal.

It is understood by both parties that, when the Terminal may require safety cables to be used, and where such are required, Maraven S.A. accepts no responsibility for damages or losses occasioned to any vessel, installation or person due to the use or failure of this equipment.

The vessel's gangway must be in position so that the mooring supervisor or other personnel from the Terminal can come on board the vessel when it arrives at Punta de Palmas.

This gangway must be suspended whilst manoeuvres are being carried out, this for the purpose of obviating any damage to it occasioned by tugs or launches.

Berthing Supervisor: The Berthing Supervisor of Maraven S.A. will come on board every vessel prior to its entrance to the berth to establish radio contact between the vessel, the Marine equipment and the Office at the Terminal.

Mooring gangs and equipment: The mooring equipment will be handled by the launches employed in the manoeuvres. The tug service will be available 24 hours of the day through the intermediary of the Terminal Port.

The mooring gangs will assist the vessel personnel in the operations of hoisting, connecting and disconnecting the 2×12 in. diameter loading hoses. The approximate weight of the loading hoses is 4 tons.

The launches used for the manoeuvres will place on board equipment to facilitate the work of connecting the hoses. This equipment will be at the disposal of the vessel's personnel when required as are also the launches to transport personnel.

Responsibility: The Master may request any equipment or service which he may consider necessary for a safe and efficient operation of his vessel and the Terminal Operator will do everything within his power to fulfil this requirement. Therefore all owners and operators of vessels arriving at Punta de Palmas will accept the responsibility of the safety inherent in the manoeuvring of their vessels and their movements to and from the Terminal. Maraven S.A. will accept no responsibility for losses or damages occasioned to the ship, its installations and others unless such loss and damage be occasioned due to the faults in the installations belonging to the Terminal or operated by the Terminal with the exception of the security equipment.

Operational checklist: At the time when the vessel is moored and the hoses are connected, prior to the commencement of the operations of loading, the representative of Maraven S.A. on board will deliver to the Master an operational checklist. The Master is required, or whomsoever he may appoint to carry out this work together with Terminal representative, to check very carefully that all the safety regulations have been fulfilled.

Berthing Supervisor: The Berthing Supervisor will have charts and plans which will be at the disposal of the Master and his advice if he should require it. The representative will also be available to inspect the vessel's tanks and to act as liaison between the Master of the vessel and the Agent or with the Terminal of Punta de Palmas, to transmit any information relative to the ship. This supervisor must receive lodging and treatment at the same level as the ship's officers.

Unmooring procedure: When the loading operations are completed, the launches will proceed to remove all mooring cables from the buoys under the supervision of the official entrusted with the vessel or the Official Pilot, assisted by the Berthing Supervisor of Maraven S.A.

Documentation: The departure and loading documents will be delivered to the Master by his Agent or his representative, when he passes through the Port of Maracaibo.

BALLAST: *Deballasting:* It is understood that it is not permitted to discharge ballast in the lake, even though this may come from tanks used solely for ballast. Ballast will be discharged with the pumps of the vessel to the deballasting system which exists at the Terminal. As soon as the loading hoses are connected, the personnel of the Terminal will align the system with its respective valves. Once these operations are completed the Berthing Supervisor on board will inform the Master that he may commence deballasting and in turn will keep him informed as to the pressures which will be used in the operation. Once the deballasting operation has been completed, the personnel of the Terminal will align the system again and its valves so that the vessel can receive cargo through the same hoses which are used for unloading ballast and simultaneously the personnel of the vessel will align their systems on board to receive cargo. The personnel of the vessel responsible for receiving the cargo will inform the Representative of Maraven S.A.(Berthing Supervisor) when the vessel is in a condition to receive and he in turn will inform the personnel of the Terminal that they may commence pumping.

LOADING: *Oil leakage:* In order to obviate contamination of Maracaibo Lake and possible legal actions, we recommend strongly that Masters of vessels emphasise to their deck officers in order to obviate leakage that they make sure that all necessary measures have been taken on board to this end prior to commencing the loading operations. The purpose of this is to maintain on deck any leak or wastage which may occur in the vessel.

Guarantee of responsibility: In the event of an oil leakage or any other contamination or any other damages to installations caused by a vessel, the operator of the Terminal, prior to the vessel sailing, will require the Agent to deposit bond in favour of Maraven S.A. to cover the fine or other charges which may be incurred in collecting, cleaning, repairing the installations of the Terminal and also to cover any claims from third parties.

Loading procedure and pumping rates: The position of the loading hoses, supports and connections must be to the satisfaction of the personnel on board. The valves of the hoses for loading purposes will be opened in order to test the connections, detect leaks and then ultimately to commence operations.

The responsibility and custody of the cargo passes to the personnel of the ship from the moment when the cargo arrives at the connection which is the property of the ship.

The minimum loading rate at berths Nos. 1 and 2 is 4,000 b.p.h. The average pumping rate, under normal conditions is 13,000 b.p.h. Sudden stoppages in loading will not be permitted during loading except in cases of emergency.

Personnel on board, responsible for the loading operations, must notify the Terminal representative, not less than 30 minutes in advance of the completion of loading. This will enable the representative to instruct the operator to reduce the rate of pumping or to continue loading by gravity as he sees fit.

For reasons of security, loading may be suspended and the hoses disconnected from the vessel's manifold when weather conditions are not favourable or at any time that the Terminal considers it convenient to do so due to *force majeure* or other reasons.

Displacement of the line: Sometimes it will be necessary to displace the submarine line in combination with the loading operation. To carry out this operation it is required that the personnel responsible for receiving the cargo notify sufficiently in advance the Berthing Supervisor when the amount of cargo lacking is equal to the capacity of the line.

The capacity of the line is a fixed quantity. Therefore it must not be considered with shortcomings or excesses.

Therefore when it is necessary to effect a displacement, the loading must be calculated carefully by the vessel personnel responsible for this operation.

It is understood that any error or negligence on the part of the vessel personnel in calculating the initiation point of the displacement of the line, will require a land pump to correct the displacement. Due to the submerged manifold it will be necessary to employ a diver to operate the valves and this operation may result in a fairly costly procedure and involve a lot of time. All costs involved in fulfilling this operation, together with the time lost will be for the account of the vessel.

Increase in pumping rates: At the request of the Master and subject to the approval of Maraven S.A., it is possible to suppy a pumping rate of 17,000 b.p.h. up to a maximum of 30,000 b.p.h., provided the operations of the Terminal permit this to be done.

MEDICAL: *Maracaibo:* Complete services are available.

Punta de Palmas: Emergency cases only will be transferred to Maracaibo for treatment, at the request of the official in charge of the vessel.

FUEL: Heavy and medium marine diesel, intermediate fuel, and bunker "C" fuel oil available. Lubricating oils also available. Pumping will be affected during daylight hours and with prior permission of the Terminal.

FRESH WATER: Available from local contractors with barges. Pumping will be affected during daylight hours and with prior permission of the Terminal.

STORES: Fresh and dry provisions procurable through ship chandlers in Maracaibo for delivery at the Terminal.

REPAIRS: *Maracaibo:* There are no facilities available for carrying out major repairs. Nevertheless, repair work may be carried out through local workshops and labour can be supplied if this is required. Technicians in radio, radar, gyro compass repairs are also available.

Punta de Palmas: No type of repair will be effected here, which may prevent the unmooring of the vessel without the authority of the Marine Supervisor. Neither may boiler tubes be "blown" whilst the vessel is moored.

SHORE LEAVE: Launch service for business purposes and emergencies is readily available. Launch service for shore leave can be arranged through contract marine service and will be responsibility of ship's personnel. Arrangements for shore leave transportation can be made through Loading Master on board.

CUSTOMS: All vessels entering from foreign ports and bound for Punta de Palmas Terminal are required to anchor in Maracaibo Harbour for formal customs clearance and visit of government port authorities prior to proceeding to destination.

The vessel's accommodation ladder should be rigged prior to the vessel's arrival at Maracaibo. A member of the National Guard will board each vessel at Punta de Palmas to observe all activities connected with loading or unloading operations. This official is authorised as the customs representative, and is referred to as Customs Watch. Food and accommodation similar to officers should be made available to him by vessel.

CONSULS: See "Maracaibo".

GENERAL:

Transportation: Transportation will be supplied by launch between vessel and Punta de Palmas to the following persons, without exception:

1. Master of the vessel or the Chief Engineer, to attend to matters relating to the ship.
2. Sick personnel who require emergency medical attention.
3. Official Pilot.
4. Members of the National Guard and other Government Officials whose services relate to the tanker.
5. Doctors, when these may be required by Master, in the event of emergency only.
6. Inspectors of the oil industry.

Consular representatives, ship's suppliers, engineers, naval experts, representatives of the oil companies, suppliers of fuel and water and any other person who requires to come on board tankers when they are in Punta de Palmas must make their own arrangements for transportation to and from the ship through the intermediary of the ship's Agent. Also Agents must make their own arrangements for their own transportation.

Personnel of the ship with licence to disembark: The transportation of personnel with licence, when this is required by the Master, must be arranged through the intermediary of the Agent. Also passengers must embark and disembark at the Port of Maracaibo.

Personnel with licence are not permitted to go ashore at the Terminal of Punta de Palmas.

Classification Societies: American Bureau of Shipping, Lloyd's Register of Shipping, Salvage Association of London, Det Norske Veritas, Bureau Veritas, Registro Italiano Navale and Germanischer Lloyd have Agents in Maracaibo or in Caracas. There are experts available through the intermediary of the Agents mentioned above.

Monetary System: The monetary system of Venezuela is the Bolivar (Bs.), and is the only money legally recognised in the country. A Master who requires a cash advance must request same from his Agent when he notifies his ETA. Payment of all invoices for Terminal charges must be made in Bolivares at the Office of Maraven S.A. in Maracaibo, unless other instructions are given.

Mail: Mail for the vessel can be delivered to the representative of the Agent who comes on board the vessel at the time of its arrival or sailing from Maracaibo.

AUTHORITY: Maraven S.A.

Capitania de Puerto, La Ciega – Maracaibo, Venezuela. *Tel:* 226488.

AGENT: Head Office. (Management and Control), Brokers, chartering and tramp Agents, Victor H. Selinger S.A., PO Box 1632, Caracas 1010-A. Venezuela. Cables: "Selvic" or "Seltank". Tel. (02) 81.02.71. Telex: 22859, 21402, 21934 or 21631. New Boe Code.

Local Office: P.O.Box 496, Maracaibo. Tel. (061) 224960, (061) 224962. Cables: "Seltank Maracaibo" or "Selvic Maracaibo". Telex: 62166.

SAN LORENZO: 09.47 N. 71.05 W.

OPERATOR: Maraven, S.A.
LOCATION: S.E. side of Lake Maracaibo.
APPROACHES: Vessels have to arrive at Maracaibo Roads through a dredged channel with controlling depths of 45 ft. in outer bar, inner channel and Punta Palmas area. In vicinity of terminal the controlling depth is 36 ft.
PILOTAGE: It is compulsory from San Carlos to Maracaibo. Pilot normally boards vessel at buoy B–26 (Position Lat. 11° 01′ N. Long. 71° 35′ W.). It is also compulsory for all vessels which have to load at any terminal located South of the bridge Rafael General Urdaneta. This bridge has a horizontal clearance of 656 ft. and a vertical one of 148 ft. at 45 ft. MMOLW level. Pilots have to embark and disembark at Maracaibo.

When Masters have no Pilot exemption Certificate for crossing outer bar, permission has to be requested by VHF or 2182 kHz prior to arrival, which is being granted on request.

ANCHORAGES: Masters may use the following:

(a) Near E.M. Buoy, (not recommended because of the distance from San Carlos. The pilot launch never reaches this point).

(b) At Maracaibo Roads.

(c) At terminal approaches, in accordance with depths available in the area, and ship's draft.

LIGHTENING POSITION: In the Southern lake Area, arrangements have to be made in advance. Also at Maracaibo.
HEALTH: Quarantine officials board vessels at Maracaibo Roads. Pratique cannot be granted by radio.
RADIO: San Carlos Pilot Station has VHF Channels 12 & 16. Emergency call 2182 kHz. Terminal has VHF Channel 12.
TUGS: Compulsory. When vessel is over 25,000 d.w.t. a second tug is required, which is available in the area, 1,200 h.p. each. There is also a launch to assist the vessel during manoeuvring.
BERTHING: Continuous wharf 2,340 ft. in length with dolphins. This terminal is only for handling crude and its products. Maximum berthing displacement: 20,000 tons.

	Berth No. 1	*Berth No. 2*	*Berth No. 4*
Max. LOA	560 ft. 00 in.	665 ft. 00 in.	
Max. Depth	24 ft. 06 in.	35 ft. 06 in.	Out of Service
Max. Draft	23 ft. 06 in.	34 ft. 06 in.	
Loading Rate	1,450 t.p.h.	2,000 t.p.h.	

These depths are referred to the minimum monthly observed lowest water level (MMOLW).
DENSITY: At berths 998 and at outer bar between 1020 and 1025.
FRESH WATER: Available ex-barge at Maracaibo Roads.
FUEL: Any grade. In case vessels require grade not available at berth it may be supplied ex-barge at Maracaibo, which has mixing equipment able to supply the grade involved. Rate 20 – 140 t.p.h.
MOORING-UNMOORING: Carried out by Official Pilots. Mooring is Head-out to facilitate departure.
DEBALLASTING: Installations have ballast pit with capacity 650 cu.m. Max. discharge rate 600 t.p.h.
TANK CLEANING FACILITIES: Carried out by outside contractor.
REPAIRS: Minor repairs only, including electronics.

LA CEIBA: 09.28 N. 71.04 W.

SHIPMASTER'S REPORT: 1979.

BERTHING: There is a cement loading installation about 2 cables South of the 160 m. long pier at La Ceiba suitable for vessels up to 120 m. in length.

The approach channel is dredged to 9 m.

END OF MARACAIBO SECTION.

MORON: 10.32 N. 68.11 W.

This Terminal finished operations in 1981. All installations are being dismantled.

Vessels loading/discharging operations are now performed at El Palito Marine Terminal operated by Corpoven, S.A.

ORINOCO RIVER

Including Section A – MATANZAS
Section B – PALUA
Section C – PUERTO ORDAZ
(CVG Ferrominera Orinoco)
Section D – PUNTA CUCHILLO
(Lagoven S.A.)
Section E – VENALUM TERMINAL

IMPORTANT: VHF compulsory. Vessels without at least a VHF radio aboard will not be attended to by the Pilots at the Barima pilot station and so will not be allowed to enter the Orinoco River.

GENERAL:

1. As early as possible, advise Puerto Ordaz Radio Station, call letters YVM, giving ETA at Buoy EO of North (natural) channel, or at Buoy 0.1 of South (dredged) channel.

Shipmaster's Report: October 1982.
Contact with YVM was made 48 hours before arrival buoy 0.1; accordingly, 72 hours ETA sent via Curacao Radio.

2. 24 hours prior to arrival, send another ETA to YVM.
3. Upon arrival, depending on whether Master intends to enter Orinoco waterway through North or South channel, adhere to following procedure:
   - *(a)* *North Channel.* Notify Port Captain, Ciudad Bolivar, via YVM, of time of arrival at Buoy EO and give ETA at Buoy 27.
   - *(b)* *South Channel.* Request permission to enter from "Amacuro Pilot", via Channel 16. *Do not enter* until granted permission; while awaiting, lay to or anchor at least 1 mile outside of Buoy 0.1.
   - *(c)* All vessels must also communicate with the Point Barima pilot station, call sign "Amacuro Pilot" 2182 kHz HF or 43.18 VHF to be informed of traffic.
4. While navigating waterway, inbound or outbound, report position to YVM hourly on the hour.
5. No Pilot required nor available for navigation along North or South channel at the Boca Grande of the Orinoco River.
6. The International Rules for Preventing Collisions at Sea apply outside of Buoy 27.
7. Given the case of 2 vessels navigating North and South channels respectively the one navigating the South channel is the privileged vessel.
8. Anchoring either in North or South channels is forbidden.
9. Throughout Orinoco waterway, the down-bound loaded vessel is the privileged vessel.
10. It is compulsory to fly Venezuelan ensign inside of Buoy EO or Buoy 0.1.
11. Vessels can only carry clean ballast within Orinoco Waterway.
12. Pilotage compulsory within Pilotage Zone No. 1 of the Orinoco. Pilots board at outer boundary of said pilotage zone in upstreamward vicinities of Buoy 27.
13. Regulations for the Pilotage Zone No. 1 of the Orinoco apply inside of Buoy 27.

APPROACHES: (Also see "Radio" – paragraphs *(b)* and *(c)*).

1. *The Waterway*

A Radio Direction Finder (non-operational October 1982), located at Lat. 08° 03′ 45″ N., Long. 60° 28′ 28″ W., transmits following signal continuously: YV – AYV. The transmitter has an output of 500 watts with a range of about 200 miles and operates on a frequency of 305 kHz. While navigating the waterway, ships should favour the shore on their starboard side to the extent possible, giving preference of manoeuvre to loaded vessels in all cases. Ships navigating upstreamward (inbound), upon approaching narrow channels should await the passing and give way to downbound vessels. It follows, therefore, that downbound loaded vessels are the privileged vessels.

2. *The Boca Grande (Barima Bar) Channels*

There are 2 navigable channels across the Boca Grande (Barima Bar), identified as follows: North channel (or natural channel), and South channel (or dredged channel). The 2 channels have converging courses and meet at mile 27.7 in the vicinity of Buoy 27. Vessels navigating the South channel are privileged, regardless of the direction in which they travel.

(a) The North (Natural) Channel

This channel has a min. depth of 12 ft., referred to Mean Low Water. The approach from the sea is marked by a battery-operated electric flashing black buoy, identified with the letters EO. This buoy is located in 46 ft. of water at Lat. 09° 00′ 10″ N., Long. 60° 18′ 20″ W. Its characteristics are: colour of light, white; flash, 1.0 seconds; eclipse. 6.0 seconds; height above water, 10.7 ft., visibility, 7 miles. From seabuoy EO, the channel develops for 7.3 miles to Buoy EOA on a course of 213° 40′ True, then for 2.8 miles to Buoy EOB on a course of 198° 57′ True. From this point the channel follows an approximate straight course of about 205° True for a distance of 17 miles to Buoy 27. Starting from EOB distances between successive navigation aids are as follows: G1 at 1.9 miles; G1A at 1.5 miles; G3 at 2.1 miles; G3A at 2.3 miles; G5 at 3 miles; EL 24 at 2.6 miles; Buoy 27 at 3.7 miles. All navigation aids are black buoys fitted with white lights, except Buoy 27 and EL 24 which is a range structure indicating the West side limit alignment of the South (dredged) channel. This structure has been fitted with a white flashing light to mark the North (natural) channel.

(b) The South (Dredged) Channel

The South channel is a 400 ft. wide dredged channel. Depths therein accommodate the maximum draft authorised by the Port Captain. The approach from the sea is marked by a battery-operated electric flashing black buoy, identified with the number 0.1. This buoy is located in 45 ft. of water at Lat. 08° 55′ 52″ N., Long. 60° 11′ 17″ W. Its characteristics are: colour of light, white; flash, 0.5 seconds; eclipse, 11.5 seconds; height above water, 25 ft.; visibility, 11 miles. From seabuoy 0.1, the channel develops along 4 different courses over a total distance of 27.7 miles to Buoy 27. The course reduces by about 7° True at each of 3 turning points, located at miles 9, 15 and 21 respectively. The initial course of 234° 18′ True continues to mile 9 where it changes to 227° 07′ True. Upon reaching mile 15, the course again changes to 219° 51′ True to mile 21. At mile 21, the course changes to 212° 45′ True to Buoy 27 at mile 27.7. The centreline of the channel on all courses is visually marked by range structures fitted with green flashing, directionally beamed lights. The West (right ascending) side limit of the channel through mile 21 is also visually marked by range structures fitted with amber flashing, directionally beamed lights; the alignment given by the side ranges develops 200 ft. to the West and parallel to the centreline of the channel. Battery operated electric flashing navigation aids are located along both sides of the channel. All navigation aids along the East (left ascending) side of the channel are located 325 ft. from centreline or 125 ft. outside of the channel lateral limit. White flashing navigation aids are located at 1 mile intervals through mile 25.1; all aids along this side are black buoys, except beacons 8.1, 9.1, 14.1, 15.1, 20.1, 21.1, 22.1, 23.1, 24.1, 25.1, 27.1 and 27.7 (Buoy 27). All navigation aids along the West (right ascending) side of the channel are located 200 ft. from centreline or on the exact lateral limit of the channel. Red flashing buoys painted red are located at 1 mile intervals from mile 1.6 to mile 11.6. From mile 11.6 to mile 27.7, there are only 2 aids; red buoys 13.6 and 26.0.

3. The River Channel

From mile 27.7, the navigable channel develops upstream. The river channel is generally deep and wide, except for the following 12 reaches which require periodic dredging: miles 27.7 to 36.5; miles 37.3 to 38.6; miles 53.1 to 54.2; miles 99.0 to 106.5; miles 109.1 to 111.0; miles 131.7 to 131.9; miles 136.6 to 139.0; miles 141.2 to 145.8; miles 146.2 to 149.4; miles 167.6 to 170.8; miles 178.4 to 182.4; miles 183.5 to 184.1. Dredged channels are normally 300 ft. in width, but occasionally can be restricted to a minimum of 250 ft. The depth maintained therein can accommodate the maximum draft authorised by the Port Captain. By Notice to Mariners, the Port Captain has instructed all Masters and Pilots to reduce speed and to proceed with caution while navigating the aforesaid reaches, especially during the low water season.

4. River Stages

In response to the cycle of wet and dry seasons, the flow of the Orinoco River follows a relatively regular pattern of rise and fall each year. The river normally begins rising in late March or early April and continues to rise until it peaks at crest in late August. In September, the river begins a fairly steady recession until the extreme low-water stage is reached, generally in March. The amplitude of stage variation above the low water plane of reference (0.0 ft.) at Palua (Mile 181.7) averages about 35 ft. with min. variations of 31 ft. and max. variations of 39 ft. The effects of the flood rise decrease progressively below Palua and practically vanish in the upstreamward vicinities of the Boca Grande.

5. Tides and Currents

(a) The indicated mean tidal range is 5.4 ft. Tidal influence is not experienced above mile 60 during high river stages. At low river stages, a tidal effect can be observed throughout the waterway, although it progressively diminishes, moving upstreamward. However, the tidal effect is still significant at Puerto Ordaz, Mile 184, where a max. semi-diurnal change of 1.7 ft. has been recorded.

(b) The strength of river currents is generally commensurate with flow, the strongest currents occurring at high river stages. The velocity of currents at any one time generally decreases moving downstreamward. However, in certain locations, this pattern is affected by particular characteristics of river width and shape as well as by bottom gradient. Max. velocities of about 6 knots have been recorded.

6. Navigation Aids

(a) The navigation aids installed along the waterway consist of buoys, beacon and ranges. All aids are lighted. Identification is provided by means of numbers representing the approximate mileage of each aid, to the nearest one-tenth of a mile. The last digit of numbers identifying white lighted aids is odd, while the last digit of numbers identifying red lighted aids is even. White lighted aids mark the left ascending limit of the navigable channel, while red lighted aids mark the right ascending limit. Aids are placed as to be intervisible, to the extent that — when abreast of any one aid — the preceding and following ones can be sighted. Consecutive aids always carry different light characteristics. Buoys are normally placed on the exact lateral limit of the channel (except for black buoys along the South channel at the Boca Grande); beacons, instead, are located at variable distances outside of the channel.

(b) During the execution of dredging along any of the reaches which require periodic maintenance, buoys are generally moved 100 ft. outside the channel lateral limits. This information is made available to ships by YVM.

(c) The Ministerio de Comunicaciones, Direccion de Marina Mercante, publishes semi-annually a complete list of navigation aids. Monthly lists of changes are also published so that the complete current list can be maintained up to date.

(d) Upon encountering damaged, inoperative, or misplaced navigation aids, vessels should immediately notify YVM.

(e) Vessels are forbidden to make fast to any navigation aid.

7. Dredging Aids

Range structures, generally located close to shore or over the bank, are normally used to mark the lateral alignments of the channel along the reaches which require periodic dredging. These ranges are generally fitted with amber flashing, directionally beamed lights. The lights are extinguished except during execution of dredging. Dredging ranges *are not* to be used for navigation.

8. Navigation Charts

Navigation charts of the Orinoco Waterway should be aboard vessels for use by the Master. These charts are sold by the Instituto Nacional de Canalizaciones and are also available for purchase from the Orinoco Mining Company. If requested, CVG will, if possible, arrange to make the charts and latest revisions available through the Pilot who boards at Punta Barima, provided such request is received by radio (YVM) at least 48 hours in advance of the Pilot's boarding. A set of navigation charts, corrected to latest revisions, is maintained in the office of the Traffic and Ships' Agency of CVG in Puerto Ordaz. Masters may use this facility to keep their charts up to date.

Report: 1986.

Deficient Navigational Aids:

The deep draft New Barima (South) dredged channel is officially a 400 ft. wide dredged channel, but in reality it is considerably less in portions. Many of the red buoys showing a flashing red light which should be placed 200 ft. from the centre of the channel or exactly on the lateral limit, are either missing, out of position or unlit. The light on the black buoy which marks the entrance of the channel is inoperative. Several of the gauge structures fitted with green, flashing, directionally beamed lights, are inoperative. This makes it hazardous for a deep draft vessel to navigate the narrow and shallow channel during the hours of darkness. During the rainy period the authorised drafts declared by the Port Captain are in excess of the depths in certain portions of the channel.

We have been informed that about 20 vessels grounded in this area during the first 6 weeks of this year (1986).

DOCUMENTS: (Clearance, documentation and other requirements).

1. *Consignment of Inbound Vessels*

The official documents of all vessels proceeding to Puerto Ordaz should show the following consignment: to: CVG Ferrominera Orinoco, Ciudad Bolivar, Zona de Puerto Ordaz. The proper consignment of vessels proceeding to Palua, on official documents, is as follows: Iron Mines Company of Venezuela, Ciudad Bolivar, Zona de San Felix.

2. *Customs Requirements*

Vessels bound for Venezuela in ballast, without passengers, from foreign ports outside the West Indies or Guianas, require the following documentation:

The vessel must have a clearance certificate (Certificade de Zarpe) or sailing authorisation issued by the Customs Authorities of the port of departure, representing the government of the country the vessel is departing from. No consular certification need be placed upon this document.

Spare Parts List (Lista de Repuestos). It must contain a note of all the spare parts and objects for the service of the vessel, including fuel. To be signed by the Master and to be current as of the day of entering the Venezuelan port.

List of Effects for use of Captain and Crewmen (Lista de efectos personales de la dotacion). To be signed by the Master and to be current as of the day of entering the Venezuelan port. The Customs are very strict and will confiscate any article that appears new.

3. *Health, Immigration, and Police Requirements*

Vessels bound for Venezuela in ballast, without passengers, from foreign ports outside the West Indies or Guianas, require following documentation.

(a) Current individual International Vaccination Certificates for each member of the crew.

(b) Derat Exemption Certificate.

(c) Crew Lists (original and seven copies).

(d) Panama or Suez Canal or any comparable type measurement certificate.

Contraband: The Venezuelan law is very strict on this subject. It cannot be emphasised too strongly that all new articles, clothing, cigarettes, liquor, etc., must be declared and sealed-up upon arrival.

Meals for Pilots and Government Officials. It is requested these men be granted the privilege of eating in the officers' dining salon.

N.B. Masters of vessels calling at Trinidad for bunkers before proceeding to Venezuela must also have the documents stamped by the Venezuelan Consulate at Port of Spain.

PILOTAGE: In order to expedite the movement of shipping in the waterways, Masters are requested to establish contact with YVM station as soon as possible, giving ETA Seabuoy 0.1. At the same time a radio-telegraph message must be sent to Agents giving ETA Barima and cargo required. When vessels is 24 hours from pilot station, send another ETA via YVM.

After reporting the ETA in advance of arrival, try to contact directly, by VHF, "Amacuro Pilot" when the ship approaches Seabuoy 0.1 off the bar entrance (about 2 hours before arrival at the pilot station). (It is possible to contact Pilots 100 miles before arrival Seabuoy 0.1.)

After taking the Pilots aboard, report to Radio Marina and continue giving the ship's position according to the mile, up-river, at exactly every hour on the hour, and receive from Radio Marina the pertinent information concerning the traffic in the river waterway. If no communication can be established by voice radio aboard, comply by radio-telegraph by way of the YVM station. See "Ship's Officer's Reports" in 1st Section – "General".

Ship's Officer's Report: July, 1980.

Hourly position reports are made on W/T to YVM when the Pilot is aboard (He writes the telegrams in Spanish).

Pilots are the employees of the Venezuelan Government and act in an advisory capacity. The Master retains responsibility for the ship at all times.

(1) Pilotage is not required and Pilots are not available for navigation outside the pilotage zone. Masters will take charge of inbound and outbound navigation on the North or South channel outside Buoy 27 at the Boca Grande, without Pilot's assistance.

(2) Pilotage is mandatory within the Pilotage Zone No. 1 of the Orinoco. Inbound vessels will embark the government River Pilot in the upstreamward vicinities of Buoy 27. It is important that vessels pass Buoy 27 and be in sight of the pilot station at Barima in order to avoid any delay, as Pilots may not proceed until vessel is sighted. The government River Pilot will pilot the vessel while navigating the waterway; a special government Docking Pilot will generally take the vessel into and out of the Puerto Ordaz harbour.

Signals

(1) All signals used outside of the pilotage zone (that is to say, seaward of Buoy 27 – Mile 27.7) shall conform to the International Rules for Prevention of Collisions at Sea.

(2) Within the pilotage zone (that is to say, inside of Buoy 27 – Mile 27.7) the signals used shall be in accordance with the "Regulations for the Pilotage Zone No.1 of the Orinoco". It should be noted that these signals are peculiar to the Orinoco Waterway, and are not necessarily in conformance with the International Rules.

(3) Within the pilotage zone, special signals are used for passing dredgers at work along the waterway.

Speed

The Captain of the Port has the authority to impose speed restrictions. By means of "Notices to Mariners", the Port Captain has ordered that all vessels reduce speed while navigating by the following locations: San Felix Dock, Mile 179.8; El Toro, Miles 95.4 to 96.6. It is recommended that speed be also reduced while navigating by the Palua Dock (Mile 181.8), Barrancas (Mile 143.2), and Curiapo (Mile 60.4). At the inception of the low water season each year (generally in early January), the Port Captain has in the past issued a "Notice to Mariners" instructing all vessels to reduce speed and proceed with caution while navigating the following river reaches: (1) Miles 184 to 178, (2) Miles 171 to 167, (3) Miles 150 to 141, (4) Miles 140 to 137, (5) Miles 133 to 131, (6) Miles 112 to 109, (7) Miles 106 to 98, (8) Miles 55 to 53, (9) Miles 39 to 36.

ANCHORAGES:

(1) No ships are permitted to anchor either in the North or South channel at the Boca Grande. Vessels are to anchor at least 1 mile outside of Buoy EO or Buoy 0.1.

(2) Within the pilotage zone, no vessel is allowed to anchor in narrow channels, nor close to a turn.

(3) Between Buoy 27 — Mile 27.7 and Mile 137, vessels which need anchoring may do so by coming as close as possible to shore on the ship's starboard side.

(4) Between Mile 137 and Mile 184, the Pilotage Regulations provide for 3 permanent anchorages and 1 seasonal anchorage, as follows: Area No. 5 (permanent); Miles 139.3 to 140.4. Area No. 6 (permanent): Miles 150.1 to 151.7. Area No. 7 (permanent): Miles 178.0 to 179.0. Area No. 8 (seasonal): at the junction of the Caroni and the Orinoco. It should be observed that Area No. 7, as determined in the Pilotage Regulations, partially encroaches on the narrow (dredged) channel and on shore. Vessels are to anchor in the naturally deep and wide part of the area.

(5) The low-water anchorage (for 1 ship only) previously established by the Port Captain between Miles 182 and 183 is no longer in use. This area is currently used as the turning basin for vessels exiting the Palua Channel, upon sailing from the new Palua dock at Mile 181.8.

(6) If due to emergency a ship is required to anchor in places other than the designated areas, it should do so in such a way as not to obstruct the channel and by taking the necessary precautions to avoid swinging around.

(7) Upon anchoring vessels should notify YVM.

MAX. SIZE:

(1) *Max. permissible draft.* The Port Captain of Ciudad Bolivar can establish the permissible draft for the Orinoco waterway to a max. of about 43 ft.

(2) *Controlling Depths and Authorised Draft*

The draft authorised by the Port Captain for the Orinoco Waterway is made public by means of a "Daily Bulletin of Depths and Draft" (Boletin Diario de Profundidades y Calado). Each daily bulletin issued by the Port Captain carries the following information, in Spanish and English:

(a) Controlling (minimum) depth between Miles 184 and 133, and corresponding location.

(b) Controlling (minimum) depth between Miles 133 and 42, and corresponding location.

(c) Controlling (minimum) depth between Miles 42 and 0, and corresponding location.

(d) Predicted high tides (height and times) at Mile 13.5.

(e) River stage (height of river level above low water plane) at Puerto Ordaz and Palua.

(f) Authorised draft, in feet and inches.

The controlling depths given for locations comprised between Miles 184 and 42 are actual depths, and reflect depth conditions as of the date of the bulletin. The controlling depth given for locations comprised between Miles 42 and 0 is referred to MLWS and does not include the height of tide at high water.

The authorised draft may be predicted either on the controlling depth existent between Miles 184 and 42 or between Miles 42 and 0, dependent upon whichever is the least.

When the controlling depth between Miles 184 and 42 is the significant factor, the permitted draft authorised is at least 2 ft. less than the controlling depth in this sector.

When the controlling depth between Miles 42 and 0 is the significant factor, the permitted draft authorised is generally less than the mean low water springs controlling depth but occasionally can be equal to the mean low springs controlling depth.

Whenever the MLWS controlling depth existing between Miles 42 and 0 does not provide sufficient clearance under the keel of the vessel at low water, the Master is expected to navigate by the site where the controlling depth is located only at times when the height of tide will assure a safe passage.

(3) *Variations in authorised draft:*

(a) The authorised draft is generally increased or decreased by multiples of 6 inches.

(b) Throughout the year the authorised draft is susceptible to variations, according to the conditions of the depth and width existing in the channel at any one time. On the basis of average river stages it is estimated that the authorised draft should be about 33 ft. in the dry season from December to May.

During the rainy season, from June to November, the max. permissible draft may be as high as 43 ft.

HEALTH: Radio Pratique may be obtained by sending a message, after picking up Pilot, to the Port Health Officer, advising that there is no sickness on board, name of last port, ETA, number of crew and nationality of vessel and name and nationality of Master (This does not apply at Palua).

RADIO:

(a) Communications: Communications are generally handled through the radio-telegraph station at Puerto Ordaz, call letter YVM. This station is operated on a 24 hour basis. The operating frequencies are: 440 kHz; 472 kHz; 4322 kHz; 6505.5 kHz. The GMT — CQ times and frequencies are: 0900 hrs., 4322 kHz; 1200 hrs. 6505.5 kHz; 1430 hrs. 8722 kHz; 2000 hrs. 8722 kHz; 0030 hrs. 8722 kHz; 0300 hrs. 4322 kHz.

There is no charge for messages from ship to shore or from shore to ship handled directly through YVM. A VHF frequency modulated radio system provides voice communications along the Orinoco Waterway. Master sets for the system are installed in the Puerto Ordaz Radio-telegraph Station (voice call: "Master Radio"); Marine Radio handles shipping matters exclusively, The system consists of a high-band VHF frequency modulated voice radio network. To ensure a more efficient and satisfactory coverage, this system operates on dual frequencies alternating according to location, so that ships can either transmit on 161.700 MHz receiving on 159.000 MHz, or transmit on 161.150 MHz receiving on 159.850 MHz. For best results, ships should select frequencies according to the following: From sea to Mile 50: transmit on 161.700 MHz, receiving on 159.000 MHz; From Mile 50 to Mile 112: transmit on 161.150 MHz, receiving on 159.850 MHz; From Mile 112 to Mile 159: transmit on 161.700 MHz, receiving on 159.000 MHz; From Mile 159 to Mile 184: transmit on 161.150 MHz, receiving on 159.850 MHz.

Pilot station at Barima Bar, Palua and Matanzas are equipped with this system. For the Puerto Ordaz area, ships will transmit to Marine Radio on a frequency of 43.02 MHz and to others on a frequency of 43.18 MHz, receiving in both cases on a frequency of 43.18 MHz.

Ship's Officer's Report: July, 1980.

The VHF Channels listed are not available on standard marine sets. All VHF work is done on Channel 16 (Pilot to Pilot), and reporting on W/T to Radio Marina.

(b) Control of Navigation:

(i) Navigation on the North (natural) channel at Boca Grande is free. However, vessels are requested to notify the Port Captain, Ciudad Bolivar, via "Amacuro Pilots" on Channel 16, upon arrival at Buoy EO, giving ETA at Buoy 27, Mile 27.7.

(ii) Simultaneous navigation in opposite directions by 2 or more vessels is not permitted on the South (dredged) channel at the Boca Grande. The restriction is placed on inbound traffic, to the extent that any vessel wishing to enter the South channel requires prior authorisation from the Port Captaincy of Ciudad Bolivar. The request for permission to enter the South channel is to be addressed to the Port Captain, Ciudad Bolivar, via "Amacuro Pilots" on Channel 16. and is to be transmitted before the vessel reaches Buoy 0.1. Upon receipt of the request, the Port Captain will notify the vessel via "Amacuro Pilots" on Channel 16, whether permission is or is not granted, indicating, in the latter case, the approximate waiting time. Until permitted to enter, vessels are to anchor at least 1 mile outside of Buoy 0.1. Once that authorisation has been granted, vessels are to enter the South channel at the earliest opportunity. Any vessel which has been notified to wait may elect to proceed and enter through the North (natural) channel; in this case, the vessel will have to satisfy the requirements outlined in paragraph (1) above.

(iii) While navigating the Orinoco Waterway inbound or outbound vessels are to report their position to YVM hourly on the hour. Seaward of Punta Barima, to "Amacuro Pilots".

(c) Accident, Stranding, etc.

(i) Should a collision, stranding or other accident occur in the waterway, or should it be found necessary to take control of the vessel away from the Pilot for any reason, the Venezuelan law requires that a written report be made to the Captain of the Port by the Master of the vessel involved within 24 hours. The report is to be addressed to the Captain of the Port and may be handed to the Pilot or the ship's Agent for delivery. The Master need not appear in person before the Captain of the Port unless specifically ordered to do so.

(ii) Slight groundings or touching of banks and bottom may simply be noted on the reverse side of the receipt for pilotage signed by the Master.

(iii) In case of collision, stranding, slight grounding, touching of banks and bottom, or other accidents, vessels should immediately notify YVM.

Section A

MATANZAS: 08.17 N. 62.52 W. (See Plan)

N.B. See "Orinoco River" for all important entry requirements.

LOCATION: At Mile 195 from sea on Orinoco River.

ANCHORAGES: Between Mile Nos. 195 and 197, Orinoco River.

MAX. SIZE: Length 600 ft., breadth 74 ft., distance between rail and hatch coaming 23 ft., max. draft 41 ft. in rainy season May to November, and 28 ft. in dry season.

RADIO: See "Orinoco River". Cables address of Matanzas terminal operators is "Sidor Matanzas – Telex 86366" and cables may be routed through Caracas, Curacao or Trinidad Radio.

TUGS: Every vessel over 2,000 registered tons is required to use a tug when berthing. Tug is 1,600 h.p.

BERTHING: Reinforced concrete structure consisting of 3 different sections running in a straight line, bearing 065°.

From West to East, 3 sections should be pointed out:

The first section, some 320 m. long, is used mainly for unloading bulk cargoes. Depth 10 m. below MSL.

The second section, 400 m. long, is for handling steel products. Depth 11 m. below MSL.

The third part, some 280 m. long, is for general cargo. Depth 11 m. below MSL.

The level of the river fluctuates from 0.6 m. over MSL at low river water in the dry season (February – March) to 14 m. over MSL at high river water in the rainy season (July – August).

The river bed drops sharply from the edge of the pier to the navigation channel where the depth reaches 30 m. below MSL.

Berth No. 1: Runs from bollard No. 1 to No. 7, length 155.30 m.
Berth No. 2: Runs from bollard No. 7 to No. 14, length 176.38 m.
Berth No. 3: Runs from bollard No. 14 to No. 24, length 204.25 m.
Berth No. 4: Runs from bollard No. 24 to No. 33, length 182.75 m.
Berth No. 5: Runs from bollard No. 33 to No. 39, length 160.45 m.
Berth No. 6: Runs from bollard No. 39 to No. 44, length 158.85 m.

In addition there is another berth, length 149 m., South of No. 6, with 24 ft. of water under MSL, that runs from bollard No. 38 to No. 44.

The reinforced concrete platform is 25 m. wide at the first section and 20 m. at the second and third sections. The surface of the pier is 15.5 m. over MSL.

CRANES: Berths No. 1 and No. 2 are served by 2 "Ceretti Tanfani" bulk unloaders of 22 tonnes capacity, able to handle clamshells of 4.5 cu.m., for iron ore, lime stone and other heavy bulk, 10 cu.m. clamshells for coke and other light bulk and orange peeler and magnets for unloading scrap iron.

The reach of these cranes is 10 m. from the pier edge. The working field is from bollard No. 2 to bollard No. 13.

Berths No. 3 and No. 4 are served by 6 "CMI" gantry/trolley cranes fitted with 2 hoists of 15 tonnes each, with a total capacity of 30 tonnes with the 2 hoists in tandem. The working field is from bollards No. 15 to No. 31.

Berths No. 5 and No. 6 are served by 3 "Ansaldo" gantry/trolley cranes of 16 tonnes capacity. The working area is from bollards No. 35 to No. 44.

At bollard No. 34 there is a stationary rotary derrick of 400 tonnes capacity and a reach of 18 m.

In addition, there are 3 "Grove" auxiliary moving cranes, of the telescopic type, with a rated capacity of 80 tonnes able to work at any part of the pier.

WAREHOUSES: From bollard No. 14 to bollard No. 29, running along the South edge of the pier, there are 10 adjoining warehouses, 30×100 m. each, 3 of them open at either end and the four in the middle roofed. All of them are provided with 1 gantry crane of 25 tonnes each.

STEVEDORES: Operations are round the clock, 7 days a week.

MEDICAL: Private hospital and several doctors available.

FRESH WATER: Available at rate of 12 t.p.h.

FUEL: Available ex-barge.

CUSTOMS ALLOWANCES: 200 cigarettes and 1 bottle spirits allowed per crew member for personal consumption.

IDENTIFICATION CARDS: Provided by authorities, and necessary if crew going ashore.

REPAIRS: Local workshops undertake minor repairs.

AIRPORT: Matanzas is served by Puerto Ordaz Airport with several daily flights from Caracas.

POLICE/AMBULANCE/FIRE: The entire length of the pier is fitted with fire hydrants and at the steel mill, about 6 km. away, there is a well equipped fire brigade with firetrucks, ambulances and rescue vehicles.

A first aid centre is located close to the fire station.

TELEPHONES: No telephones or telex services are available at Matanzas for the use of vessel's personnel. Local telephones only available at the pier and dock supervisor's office. Recommend vessels use their VHF to communicate with their Agents while at anchorage and when alongside.

REGULATIONS:

Pollution: Venezuelan law and Sidor's port regulations are very strict on air and river water pollution, the following restrictions being in force:

1. No smoke to be ejected from vessels' funnels while moored at Sidor's pier.

2. No waste, refuse or garbage to be dumped in the river while in the river channel, at Matanzas roads or laying alongside the pier.

3. All waste, refuse or garbage kept on deck, to be sprayed with anti-vermin and kept covered.

4. No salt water ballast, bilge water, oils, refuse water from galleys and lavatories, etc., to be pumped into the river.

In addition to whatever penalty the vessel shall incur under Venezuelan law, Sidor reserves its right to place the offending vessel "off hire" until she has complied with the regulations.

Safety: Under Sidor's security norms, every person which, for whatsoever the reason or business, has to transit or stand on the pier's platform is bound to use a hard hat. People doing any kind of work on the pier have also to use safety shoes.

GENERAL: Sidor's pier will discharge and/or load cargoes for other industries of the area provided a berth is available and no Sidor vessels are waiting. Permission for such operations must be requested prior to vessel's arrival.

Sidor require Agents to provide stowage plan and cargo documents prior to vessel's arrival otherwise Notice of Readiness will not be accepted.

OPERATOR: C.V.G. Siderurgica del Orinoco C.A., Codigo Postal 8016, Matanzas, Ciudad Guayana, Estado Bolivar, Venezuela. *Tel:* 991111 and 991118. *Telex:* 86366 and 86229 (Sidor). *Cables:* Sidor Matanzas. *Contact:* Superintendent, Port Services.

Section B

PALUA: 08.21 N. 62.41 W.

N.B. See "Orinoco River" for all important entry requirements. Specific details, relevant to Palua only, are as follows:

SUPPLIER: The ore supplier is CVG Ferrominera Orinoco C.A., cable address "Ferrominera". Their Palua office is fitted with VHF radio-telephone on 161.150/159.850 MHz and 2182 kHz (call).

CLEARANCE: Agent will secure the Clearance dispatch.

Note: The Palua dock and facilities are the private property of CVG Ferrominera Orinoco C.A. All Company regulations must be obeyed by vessels and vessels' personnel.

The Bill of lading will be prepared by CVG Ferrominera Orinoco C.A., also the Commercial Invoice on the Consular Invoice form 138. The Inward Foreign Manifest, U.S. Customs form 7527–B, should be prepared by Master after sailing from Palua.

MAX. SIZE: Max. Draft 43 ft. Max. d.w.t. 70,000 tons.

HEALTH: The vessel will be boarded by the Public Health Doctor after docking at Palua; unless instructions to the contrary.

In the event that the Authorities have to board the vessel anchored out in the stream, an accommodation ladder should be rigged, preferably on the starboard side, to keep the port side clear for docking. Venezuelan authorities and workmen will not use Pilot ladders.

RADIO: Should a vessel receive radio advice at sea to proceed to Palua, and the clearance is to another port, it is requested to send following information to "Ferrominera" at earliest convenience. i.e. Master's full name and nationality, vessel's nationality, port and number of register, net and gross tonnage, type of vessel M/V or S/S, vessel's overall length and width, last port of call, original port of destination. This is necessary in order to comply with the Venezuelan Custom Law.

BALLAST: To provide the best manoeuvring trim on docking, it will be at the discretion of the Master to properly ballast the vessel. But in order to lose no time on loading operations, as well as to prevent short loading, the ballast should be pumped out as soon as possible, using utmost caution not to pump oil or sludge overboard in the port area.

APPROACH AND DOCKING IN PALUA: After passing the village of San Felix, and before reaching the turn off from the main channel, a tug and a Docking Pilot will meet the vessel and will assist in the docking manoeuvre. Although the Master will always be responsible for the vessel's movements either in the case of docking or undocking, the Docking Pilot will actually pilot the vessel to, and dock the ship at Palua.

At Mile 180.5 the ship should leave the main channel, turning to the left to follow the new dredged entrance channel of approach which is marked by 2 flashing buoys: white on the port and red on the starboard side. Diamond-shape range marks of 6 ft. side, painted white with black diagonal cross, indicate the centre line of the approach channel. The front range, fastened on the ore loading pier, shows flashing green light, and the rear range, set on a tower shows flashing green light, and the rear range, set on a tower approximately 2,000 ft. away, has fixed green light.

The docking shall be port side to in all events; and please stow all hatch boards, or pontoons, or steel battens, etc., on the starboard side of the hatch as this will keep the gear cleaner and lessen the work of the ore handling gang.

Vessel's accommodation ladder is used. Nothing should overhang the port side of the vessel on docking.

If the loading berth is not available the arriving vessel would be instructed to anchor at an anchorage just below the entrance to Palua approach channel at Mile 179.

LOADING DOCK: The ore loading port is located at Mile 181.5 of the Orinoco waterway, along the left bank going up-river. The new steel dock here is aligned up and down stream in the general direction of the current. It is 907 ft. long between its pointed heads, with 791 ft. of boarding side along, the deck fixed at about 6 ft. over the maximum rise of the river in the flood season. It has a strong fender system of steel structure covered with timber overhanging the side, down to near the lower river stage; and is fitted with 14 bollards plus 2 more, one on each head, for proper docking and securing the vessel.

Once the vessel is moored alongside the new ore loading dock, there shall be no further shifting necessary to load, as the loading tower moves along the dock on rails to facilitate the loading through the various hatches.

LOADING: The ore handling and loading equipment for Palua has a capacity to load 3,000 metric tons of ore per hour, for the time being. With this capacity, the vessel's mooring lines should be tended during the operation.

The boom of the loading tower is so designed as to allow free movement in any direction, fore and aft. The gantry and boom travel along the dock for a distance of 518 ft., and can place the ore at a distance horizontally out from the dock fenderline of 23 ft. minimum and 62 ft. maximum at the highest water stage, and from minimum 29 ft. to maximum 67 ft. horizontally out at the lowest stage.

Care must be taken during the course of loading to avoid piling the ore too high in the holds, as this necessitates hand trimming before the hatch covers can be properly secured, and incurs unnecessary trouble.

UNDOCKING: The Master, assisted by a Docking Pilot, if required, will handle the vessel on leaving the dock, going upstream from the dock not less than 0.75 miles distance to the turning basin in the same heading as when the ship moored alongside. One tug (or 2 tugs if required), will go alongside the ship prior to undocking and will assist the vessel until it is headed downstream in the main Orinoco channel. The amber lights at the heads of the dock form a range to mark the shoreside boundary of the local dredged channel. A red light high up on the loading gantry will come in the same range as the 2 amber lights. In the turning basin a tugboat will assist the vessel swinging downstream.

When the ship is in the main channel, properly headed downstream, the Docking Pilot will leave on the tug, and the River Pilots (2 of them) will assume the navigational direction. Report to Radio Marina by voice radio and give ETA at Mile 31.

Report again to Radio Marina giving position every hour, and try to contact Barima Pilot station sometime before arrival at Mile 31, where the Pilots will disembark.

If voice radio communication is not possible, comply by radiotelegraph by way of the YVM station.

REGULATIONS: The Venezuelan law is very strict on the subject of contraband. It cannot be stressed strongly enough that all *new* articles, clothing, cigarettes, liquor, etc., must be declared and sealed up on arrival.

Concerning passes, the regulation states that "members of the crew who are not officers of the vessel, in order to go ashore and return aboard, have to be supplied with an identification card to be issued by the Purser of the vessel or his substitute, which card will contain the name of the vessel, the name of the crew member and the date of issue. This card will have to be signed by the person issuing same and has to be authorised by the respective officer of the Port Captain's office for the district".

GAS-FREE CERTIFICATE: Vessels reporting to Palua to load ore should have the holds and cargo compartments swept clean and ready to receive cargo. Also, any combination ore/tanker vessel tendering to load iron ore at Palua shall present, along with the notice of readiness, a Gas-free Certificate if said vessel has in the past been employed in the carriage of petroleum products. Such certificate shall be dated subsequent to the discharge of the vessel's last petroleum cargo. But they are advised that around Palua in Venezuela there is no chemist available for granting such a Gas-free Certificate. It may be secured before arriving at Venezuela by calling at Trinidad, reporting to cable address: Harriman, Port of Spain.

In case of necessity, or for convenience, it could be arranged for the chemist to travel to Venezuela to meet the ship in Palua, advising Harriman (Port of Spain) at least 3 days before arrival at Palua.

If the vessel is equipped with a gas-indicating meter (explosimeter), CVG Ferrominera Orinoco C.A. will accept the Master's certification in writing that the vessel is gas-free. However, they reserve the right to check the vessel with their own equipment prior to acceptance.

CONSULS: At the present time there are no Consular Agents located around Palua, the nearest being in Ciudad Bolivar or Caracas.

FLOOD SEASON: The port experiences a yearly flood season from the middle of June to the middle of November, to a max. of about 38 ft. at the last days of August, above the lowest stage (during the first days of April) in the dry season that occurs from the middle of November to the middle of June.

TIDE: The wind in the locality blows generally upstream, and on exceptional occasions during the dry or low-river season, when the current is weak, does overcome the current and cause the anchored ships to tend with stern upstream.

REPAIRS: Minor emergency repairs of mechanical, electrical and electronic types may be carried out in the shops by the personnel of the Iron Mines Company of Venezuela. The American Bureau of Shipping has a surveyor at Puerto Ordaz, near Palua.

MEDICAL: There is a medical dispensary at Palua, and a hospital of the Company at El Pao, where seamen may be admitted when requiring hospitalisation in emergency cases.

FUEL: All grades of bunker fuel are available at Palua, delivered by barge.

FRESH WATER: Drinking water is available at the dockside in limited quantity of about 100 tons every 24 hours. Small amounts of fresh provisions may be obtained in the locality.

Section C

PUERTO ORDAZ: 08.21 N. 62.43 W.

OPERATORS: CVG Ferrominera Orinoco.

LOCATION: The operations of the CVG Ferrominera Orinoco are centred in the State of Bolivar in Eastern Venezuela and iron ore is loaded into ocean-going vessels at Puerto Ordaz 08° 21′ N., 62° 43′ W., at the junction of the Caroni and Orinoco Rivers, approximately 184 nautical miles from the open sea.

GAS-FREE CERTIFICATE: Any combination ore-tanker vessel tendering to load iron ore at Puerto Ordaz shall present, along with the notice of readiness, a gas-free certificate if said vessel has in the past been employed in the transportation of petroleum products. Such certificate shall be dated subsequent to the discharge of the vessel's last petroleum cargo. Gas-free certificates can be obtained through an approved surveyor in Puerto Ordaz.

APPROACHES: See "Punta Cuchillo".

HEALTH: Vessels will be boarded by the Public Health Doctor in the stream off Puerto Ordaz. He will not come up a Pilot ladder and will insist on an accommodation ladder which should be rigged and ready when he approaches. In order not to delay docking, this accommodation ladder should be rigged on the port side during low river stage, and starboard side during high river stage.

RADIO: Should a vessel receive radio advice at sea to proceed to Puerto Ordaz, and the clearance is to another port, the Master must radio station YVM Puerto Ordaz, and advise the name of the vessel, flag, port of embarkation, original port of destination, Master's name and number of members in the ship's crew. This is necessary in order to comply with article 17 of the Venezuelan Customs Law.

TUGS: All vessels touching at Puerto Ordaz will be assisted by a tug in docking and undocking manoeuvres. Line-handlers are available on the dock to secure mooring lines on vessel's arrival, and to release them on vessel's departure.

BERTHING:

1. **The Harbour:** The Puerto Ordaz Harbour extends from Mile 183.5 to Mile 184.1 of the waterway. The harbour consists of a natural basin formed by the mouth of the Caroni as it flows into the Orinoco. The width of the turning area within the basin varies from a min. of about 1,600 ft. at low water to a max. of about 2,000 ft. at high water. The lighted buoys marking the navigable limits on either side of the harbour are moved to different positions according to river stages in order to achieve full utilisation of navigable waters. The bottom of the harbour is generally rock, with scattered layers of sand overburden deposited as sediment by the river. This sand is regularly removed by dredging in order to maintain depths which will accommodate the maximum draft authorised by the Port Captain. The bottom configuration across the harbour consists of a rocky shelf extending about 900 ft. from the face of the dock. Beyond this shelf the bottom slopes steeply into a deep gorge, then rises to form a sandy beach along the opposite shore. The velocity of river currents at this site varies according to stage levels. A slower current is generally experienced over the rocky shelf adjacent to the dock, with velocities averaging about 1.5 knots at flood stages and about 0.5 knots or less at reduced river stages. The velocity of the current over and along the deep gorge averages about 3.5 knots at flood stages and 1.5 knots or less at reduced river stages. During extreme low water, the basin is subject to tidal influence and the velocity of currents is minimal, although there is no reversal of flow. The direction of the current is aimed slightly toward the face of the dock at its S.E. end but deflects away from the pier about 500 ft. downstreamward. Access to the harbour is by way of a naturally deep and wide fairway which is the continuation of the gorge as it enters the Orinoco River.

2. **The Dock:** The Puerto Ordaz Dock is located along the right ascending side of the harbour and extends outward from shore on a S.E. by East alignment. The all-steel fixed-height dock is 1,885 ft. long; its elevation is 41 ft. above low water plane (0.0 ft. stage). This dock is fitted with a strong fender system and with a sufficient number of accessible bollards for proper docking and securing.

3. **Arrival:**

(a) Notice of Readiness: When completely ready to receive cargo, vessels will submit "Notice of Readiness" to CVG Ferrominera Orinoco. Vessels will be loaded in the order in which Notices of Readiness are accepted by CVG Ferrominera Orinoco. The Company will advise when the vessel may proceed alongside the dock.

(b) Docking: Special Docking Pilots are provided for the docking and undocking of vessels at Puerto Ordaz. These Pilots are qualified River Pilots, thoroughly familiar with local conditions. All vessels will dock starboard side to. During the low water stage, which is from the middle of November to the middle of June, no gangway should be rigged and nothing should overhang the starboard side of the vessel. When the river is sufficiently high which is from the middle of June to the middle of November vessels are requested to have starboard gangway or accommodation ladder rigged and ready to lower immediately after docking in order to expedite the commencement of loading. Venezuelan authorities and workmen will not use Pilot ladders. Vessels reporting to Puerto Ordaz to load ore should have holds and cargo compartments broom clean and ready to receive cargo. Considerable time will be gained if this requirement is met prior to reporting.

(c) Hatches: On arrival at Puerto Ordaz all hatch boards or pontoons, beams, tarpaulins, steel battens, wedges, etc., should be stowed on the port side of the hatch. This will keep the hatch gear cleaner and lessen the work of the ore handling clean-up gang.

(d) Ballast: In order to lose no time with the loading operations, as well as preventing short-lifting, all ballast should be pumped out before arrival at the dock. Use utmost caution not to pump oil or sludge overboard in the port area. CVG Ferrominera Orinoco Ships' Agency Representative will contact vessel on arrival and will assist in every way possible.

4. **Departure:** All vessels which have completed loading at Puerto Ordaz and have received the latest river information from the port offices, and are ready for their river transit in every respect, will proceed outward via the Orinoco Waterway, disembarking the Pilot at Mile 31. Once the Pilot has disembarked, vessels shall proceed over the South (dredged) Channel to Mile 0, and exit the waterway.

TANKERS: See "Punta Cuchillo".

MEDICAL: There is a hospital at Puerto Ordaz which will admit seamen requiring hospitalisation.

FRESH WATER: Drinking water is available alongside the dock.

FUEL: Bunker "C" and diesel oil is available.

CONSULS: An Italian consulate Agent at Puerto Ordaz, nearest consuls for other countries at Cuidad Bolivar or Caracas.

REPAIRS: Minor emergency repairs may be carried out in the shops of CVG Ferrominera Orinoco.

TIME: The legal time of Venezuela, which is 4 hours behind GMT, shall be used in Pilotage Zone No. 1 of the Orinoco river.

SHORE LEAVE: Permitted, but it is mandatory that all crew members should report back to their respective ships before sailing time.

GENERAL: 1. *Ore Loading Equipment:* The ore handling and loading equipment installed on the pier has a speed ratio of 6,000 long tons of ore loaded per hour. Due to this great loading capacity the vessel's mooring lines must be tended at all times.

2. *Handling Facilities:* A movable 110-ton, rail mounted stiff-leg derrick is installed on the dock for the handling of general cargo.

3. *Provisions:* Small amounts of fresh provisions are available.

4. *Surveyor:* The American Bureau of Shipping has a non-exclusive surveyor in Puerto Ordaz. Lloyd's has an Agency in Ciudad Bolivar with a branch office in Puerto Ordaz, and will appoint surveyors upon request.

SHIPMASTER'S REPORT: October 1986.

Terminal: Interalumina Terminal.

Location: Lat. 08° 18.7′ N., Long. 62° 49.0′ W.

Local Time: GMT minus 4 hours.

Approaches: Vessel can anchor 3 miles North of Sea Buoy (Lat. 08° 56′ N., Long. 60° 10.4′ W.). Contact Punta Barima Pilots or Amacuro Pilots on VHF Channel 16. After obtaining permission, vessel must proceed to inbound buoyed channel without Pilot for 27 miles up to Buoy No. 27.1. Channel of sufficient depth, variable width becoming very narrow at times. One way transit only. Current sets are various.

Pilotage: River Pilot boards at Buoy No. 27.1 and continues till 2 miles before berth. There are various buoyed channels enroute with dredging in progress. Several bends in the river, requiring close watch on steering at all times. For outbound pilotage, River Pilot and Berthing Pilot board at berth with River Pilot disembarking at Buoy No. 32.1.

Berthing: Berthing Pilot boards 2 miles before berth. Length of berth over 300 m. One tug available. Multi-purpose berth for alumina loading by chute and bauxite discharge by grabs. Sufficient depth alongside.

Loading: Cargo worked throughout 24 hours. Loading by conveyor-fed telescopic chute, capacity about 1,000 t.p.h. Chute reaches all holds.

Density: About 995 alongside berth.

Fresh Water: Available at berth, good for washing water but unsuitable for drinking.

Bunkers: HFO and DO can be supplied by barge.

Provisions: Fresh provisions and bonded stores can be supplied by Puerto Ordaz Ship Chandlers.

Shore Leave: No restrictions. Shore passes required. Puerto Ordaz City is 30 minutes by car.

Radio: For messages addressed to local Agents in Puerto Ordaz, it is better using some nearby foreign coast stations. YVG (Maracaibo Radio) provides unreliable service on HF. YVM (Puerto Ordaz Radio) does not accept public correspondence and controls all inward bound and outward bound transitting traffic only. Necessary that vessel gives time of passing Entrance Buoy and ETA at Buoy No. 27.1. Vessel is also required to give hourly position at the beginning of each hour until arriving at berth or anchorage and at the same time will obtain information concerning the changes of channel buoy positions and the transitting traffic for the vessels in the channel from the station.

For outward bound vessel, vessel to keep the same watch until passing Entrance Buoy.

The following are the paired frequencies for communicating with YVM (Puerto Ordaz Traffic Control): 468/472; 4192/4322; 6320/6372; 8386/8453 kHz.

AGENT: Mailing Address: CVG Ferrominera Orinoco C.A., Agencia de Barques, Puerto Ordaz. Telex: 86249 (Orinadm).

CVG Ferrominera Orinoco acts as ship's Agent for all vessels consigned to load iron ore at Puerto Ordaz. This function is performed by the Superintendent, Traffic & Ship's Agency and his staff, whose offices are located adjacent to the loading dock at Puerto Ordaz.

Section D

PUNTA CUCHILLO, (Puerto Ordaz Terminal):
08.20 N. 62.47 W. **(See Plan)**

N.B. See "Orinoco River" for all important entry requirements. Specific details relevant to Punta Cuchillo only are as follows:

OPERATORS: Lagoven S.A.

LOCATION: The terminal and dock is located near Mile Post 192 on the South side of the river.

PILOTAGE: Government Pilot will pilot vessel to Puerto Ordaz. In some cases this same Pilot will act as Mooring Pilot and dock vessel at the terminal. If River Pilot does not also act as Docking Pilot, the River Pilot will disembark at Mile 178 during LW, and Mile 183, in HW, and a Docking Pilot will embark and take the vessel to mooring.

Pilots are obtained at Buoy 27 of the old channel, which is the same as Buoy 27.7 of the new channel and is located 5 miles West of the old lighthouse at Punta Barima at Lat. 08° 36′ 00″ N., Long. 60° 30′ 40″ W. It is important that vessels pass this buoy and be in sight of the Pilot Station (1 mile E.S.E. of Punta Barima Lighthouse), as Pilots will not proceed to the vessel until it has been sighted.

APPROACHES: *Shipowners Report:* 1982.

Cautionary Advice: Due to several wrecks located in the approaches 6 miles North and 13 miles N.W. of the Fairway Buoy, extreme caution is necessary when approaching.

The coastline is difficult to pick up on radar and the Fairway Buoy is detected within a distance of only 3.5 miles. Contrary to the chart, it is currently not fitted with a racon. The buoy is not 25 ft. high as described in pilot books. It is, in fact, a small black buoy with a lattice construction with the radar reflector missing. In clear weather the channel buoys can be visually sighted and detected on radar at about 5 miles.

From the Sea Buoy 0.1 to position Mile 9, a strong N.W. set is experienced and an average of 5° set to channel course can be expected. After position Mile 9 set decreases and becomes variable in direction until arriving at Pilot Station Mile 27 position.

From August until the end of the year the river current can attain a rate of 5 knots, making it necessary for an outbound vessel to reduce speed when approaching river bends in order to ensure bends can be safely negotiated. Due to the strong currents of the Orinoco River, recent experience indicates that, if a vessel goes aground, the Master when attempting to lighter the vessel should drop an anchor prior to discharging ballast.

All stretches of the river have range markers which mark the centre of the channel. While manoeuvring in the river, the vessel tends to steady up when rudder is put midship without any counter rudder. This does not affect the manoeuvrability of the vessel but Master and Pilot should be aware of this so as not to take rudder off too fast when turning.

Buoys are NOT on the edge of the channel from the Sea Buoy to Mile 27.0. White buoys are 125 ft., Red buoys are 75 ft. outside the edge of the channel. Buoys are located at the point where the channel starts to slant downward to the deeper water. The main dredged channel is 400 ft. wide. The ranges are on the centre of the channel.

Masters must refer to the sailing directions for additional information.

MAX. SIZE:

Gauge Reading	*Maximum Draft*	*Tide Required at Bar*
12 ft. – 14 ft.	33 ft.	None
14 ft. – 17 ft.	34 ft.	None
17 ft. – 20 ft.	35 ft.	None
20 ft. – 23 ft.	36 ft.	None
23 ft. – 26 ft.	37 ft.	None
26 ft. – 29 ft.	38 ft.	None
29 ft. – 32 ft.	39 ft.	None
32 ft. – 35 ft.	40 ft.	None
35 ft. – 38 ft.	41 ft.	half of high tide
38 ft. – 41 ft.	43 ft.	half of high tide

HEALTH: Vessel will be boarded by the Public Health Doctor in the stream off San Felix or Puerto Ordaz or occasionally at the Terminal. If he boards before docking, an accommodation ladder should be rigged and ready when he approaches, as he will not come up a pilot ladder.

RADIO: Vessels diverted at sea to Punta Cuchillo which do not have a Venezuelan clearance on board, must advise Lagoven by radio as soon as they receive their orders to change destination. The following information must be given: Master's name, vessels flag, net tonnage, last port of call, port to which originally cleared and ETA. This information is required in order that inward clearance may be arranged with government officials in ample time prior to vessel's arrival. In absence of this information, vessel will be subject to a fine.

TUGS: The use of tugs is necessary in docking and undocking manoeuvres of boats at this Marine Terminal. Alcoa has a 2,100 h.p. tug available for this service. A tie-up launch will be provided to assist in the mooring of the vessel, and will handle all the mooring lines before and after loading.

BERTHING: The dock at the terminal consists of a docking platform, 2 breasting dolphins and 2 mooring dolphins. The docking platform is connected to shore by a 10 ft. causeway capable of carrying a light truck.

At mean low river stage, water depth at the face of breasting structures is 40 ft. The bank rises sharply from face of dolphins toward shore. The 40 ft. depth contour extends parallel to shore for a considerable distance upstream and down stream from the dock, allowing a flat approach angle.

Current is negligible during low river stage and is approximately 6 knots at midstream at high river stage. Current runs generally parallel to the face of the dock at the dock site.

Top of dock elevation is 45 ft. above low water stage. Buffering system extends from a point below low water stage to a point immediately below top of dock. Nothing should overhang the shoreward side of the vessel when docking during the lower stages of the river. The buffering system is designed to accommodate forces exerted by a vessel of 47,000 tons displacement, approaching the dock with a velocity component perpendicular to the dockface, of 0.5 ft. per second.

Bollards for vessel's lines are provided at the mooring dolphins and at the breasting structures. Mooring dolphins will safely withstand 200,000 lbs. of mooring line tension.

The facilities include a 24 in. diameter submarine pipe-line which crosses the river a short distance down-stream of the dock. The crossing is marked by triangular-shaped signs on both banks of the river. Masters are cautioned against use of vessel anchors in this area.

The terminal pumps are capable of loading oil aboard ship at the rate of approximately 14,000 bbls.p.h.

INWARD CLEARANCE FOR DIVERTED VESSELS: Vessels diverted to Puerto Ordaz to load cargo should submit all documents, except consular mail, which they will not have. In lieu of this, they should submit 4 copies of the cable to divert, leaving enough space for the translation in Spanish. Vessels diverted at sea to Puerto Ordaz (Lagoven Terminal) which do not have a Venezuelan clearance on board must advise Lagoven at Puerto Ordaz, by radio as soon as they receive their orders to change destination. The following information must be given: Master's name, vessel's flag, net tonnage, last port of call, port to which originally cleared and ETA. This information is required in order that inward clearance may be arranged with government officials in ample time prior to vessel's arrival. In absence of this information, vessels will be subject to a fine.

SAFETY: The following is a condensation of the safety precautions that should be observed when the vessel is alongside the dock:

(i) All passageway doors leading to the cargo deck areas are to be kept closed during cargo-loading operations.

(ii) Ship's firefighting equipment must be kept ready at all times while berthed at Lagoven dock.

(iii) Smoking or carrying lighted or unlighted pipes, cigars or cigarettes on the weather decks of the vessel, or on the dock, is strictly prohibited under all circumstances. Masters are requested to instruct their crew not to throw lighted cigars or cigarettes over the side or out of the portholes.

(iv) An efficient watch must be maintained on deck and in the engine-room on the vessel, and a sufficient number of men must be on board at all times to move the vessel any time, in case such is required.

(v) If the galley is located near oil-handling operations of any nature, the skylight lids should be kept down and secured to prevent the galley being sprayed with oil in the event of a burst hose.

(vi) Ventilators in the vicinity should be turned away from the scene of operation.

LOADING: Monagas crude is the only cargo available at the Puerto Ordaz Terminal. This crude has an API gravity of 11.9° to 12.5° F. (6.490 – 6.517) U.S. barrels per long ton. This cargo must be heated to approximately 140° F. in order to attain normal discharge rates.

Loading is accomplished through 3×10 in. hoses provided with 10 in., 150 lb. ASA flanges. Hoisting gear is provided for handling the hoses. A dock crew will connect the cargo hoses and disconnect them on completion of loading. Some adapters and other tools are available on dock. The oil will be loaded at an elevated temperature.

Precautions, as are common for any heavy oil, should be taken to ensure that no ballast water is left in any tank to be filled with this oil. If the cargo is contaminated with water, the water will not separate from the oil. The salt content of the oil will be raised approximately 10 lb. per 1,000 barrels for every 0.10% contamination by sea water.

All cargo compartments must be stripped dry. Cargo pipe-lines should be drained and/or purged of water.

There is no provision at the Puerto Ordaz Terminal for disposal of dirty ballast or tank washings. Tankers bound for Puerto Ordaz for loading must dispose of all dirty ballast and tank washings before entering the Orinoco River.

Prior to proceeding to sea, all Butterworth plates, cargo tank hatch covers and ullage plugs should be inspected to ensure against entry of salt water.

FRESH WATER: Fresh water is available ex-barge; cable advice of 24 hours is required. Dry provisions may be obtained in very limited quantities.

FUEL: Bunker fuels are available at all hours from Astilleros Orinoco C.A., who operate a floating storage and blending facility in the Orinoco River. Bunker fuels may be received at Lagoven dry dock while loading crude. Full cargoes can be made available.

TIME: GMT minus 4 hours.

MEDICAL: Medical assistance can usually be arranged, particularly in the case of an emergency.

REPAIRS: No major repair facilities are available. However, small repairs can be taken care of through local machine and electrical shops, and shore labour can be obtained if required.

AGENCY: Lagoven handles all papers and documentation connected with the ship's business. Lagoven will also help the ship's Master in providing required land transportation, limited provisions, or any other assistance that may be required for the operation of the ship's normal business. Alcoa will also assure that the ship's requirements are met in regard to Sanitary Inspection, Customs Inspection and Guardia Nacional.

Section E

VENALUM TERMINAL: 08.18 N. 62.50 W.

SHIPMASTER'S REPORT: February, 1981.

LOCATION: Mile 194 on Orinoco River. See "Matanzas – San Felix" in "Plan Book".

ENTRY: See "General, etc." under Orinoco River.

TUGS: Are summoned by Pilot when required.

BERTHING: Modern quay built on piles parallel to the bank with access by two piers, one at either end of the general cargo quay, allowing a one way system to be operated.

Length of general cargo quay – 215 m.

Length of bulk cargo quay – 85 m.

Depth alongside at lowest state of river – 12 m.

CRANES: The general cargo quay has two container cranes of 35 tonnes S.W.L. each. Aluminium ingots are the main cargo but other cargoes are handled. Container spreaders are available and also electro-magnets for use with the cranes.

BULK CARGO FACILITIES: Also see "Berthing".

The bulk cargo quay is served by an elevator with two suckers and is used exclusively for the discharge of alumina. An average rate of 200 tonnes/p.h. is claimed.

STEVEDORES: Working hours – 24 hours a day, 7 days a week.

AUTHORITY: Industria Venezolana de Aliminio C.A., Zona Industrial Matanzas, Puerto Ordaz – Edo Bolivar. *Tel:* 27177 (ext. 359 – 530). *Telex:* 86302, 86437. *Contact:* L. Rene Siampon, Traffic Chief.

END OF ORINOCO RIVER SECTION

PERTIGALETE: 10.15 N. 64.34 W.

LOCATION: Situated in a sheltered bay about 2 miles East of the port of Guanta, or about 4 miles from the pilotage zone situated in the North.

PILOTAGE: The pilotage zone in Pozuelos Bay is the same as for Guanta, i.e. an area situated between the islands of Borracha and Chimana, in the Bay of Pozuelos (formerly called Bergantin Bay).

From the pilotage zone for the port of Guanta/Puerto La Cruz, the private pier Pertigalete is to be approached by sailing between the Isla de Plata and the island of Cachicamo. Pilotage is compulsory in and out and is performed by well-trained government Pilots. The navigation is considered very safe.

MAX. SIZE: The depth of water for ocean-going vessels alongside the Pier is 20 ft. (shore side) to 40 ft. (sea side).

TUGS: Available from inward clearance port at Guanta/Puerto la Cruz.

BERTHING: The private pier in Pertigalete for berthing ocean-going vessels is up to 150 m. (492 ft.) long. The apron is ample and allows easy manoeuvre of trucks with cement. On the same pier the cement factory is regularly receiving raw material and machinery, but the berthing is along the West side of the pier for coastal trade, so does not interfere with operations for ocean-going vessels. There are chutes, conveyor belts from the nearby silos. No cranes available.

TANKERS: Berth at private wharf at Pamatacualito, operated by Baroid de Venezuela SA. Length of berth 113.60 m., depth alongside 10 m.

LOADING: The cement factory is able to deliver to the pier 600 tonnes per hour (cement in bulk).

STEVEDORES: Loading operations are performed exclusively by the personnel of the cement factory. All costs, including overtime, are for account of the cement factory.

Under normal conditions on Saturday afternoon there is no work, but almost without exception the cement factory works overtime on Saturdays if by doing so the vessel can be despatched that day. On holidays, if circumstances call for urgent operation, the cement factory has the option to work overtime. Work on Sunday is prohibited.

AUTHORITY: Private pier of C. A. Venezolana de Cementos is under the jurisdiction of Customs and Harbour Master of Guanta/Puerto La Cruz, Eastern Venezuela. All charter business and general administration is covered by Caracas Headquarters of C. A. Venezolana de Cementos.

Local address: Venezolana de Cementos, Apartado 4141, Puerto La Cruz. *Tel:* 95421-28. *Telex:* 81154 Vencemos.

AGENT: Head Office (Management and Control), Brokers, Chartering and Tramp Agents, Victor H. Selinger, S.A., PO Box 1632, Caracas. 1010-A. Cables: "Selvic" or "Seltank". Tel. (02) 81.02.71. Telex: 21402, 21934, 22859, 21631. Local Office: P.O.Box 4194 Puerto La Cruz. Tel. (081) 662107, 662665. Telex: 81340. Cables: Selvic Puertolacruz, Seltank Puertolacruz.

PUERTO CABELLO (inc. Borburata): 10.29 N. 68.01 W. (See Plan)

DOCUMENTS:

Last Port Clearance.
6 Crew Lists.
6 Passenger Lists.
3 Stores Lists.
3 Narcotics Drugs Lists.
2 Lists of Personal Effects.
1 Vaccination List.
Derat Certificate.

PILOTAGE: Pilotage is compulsory, but vessels must first anchor in roads 1 mile North of Punta Brava to await entry formalities and berthing orders.

MAX. SIZE: Bulk Cargo Pier: up to 32 ft. draft.

Inner Port: up to 28 ft. draft. Also see "Tankers".

TUGS: The use of tug-boats within the port is compulsory both for entering and leaving port, as well as for manoeuvres in the port basin, for foreign flag ships over 300 tons.

BERTHING: The port entrance is 100 m. wide in direction West to East. Berth No. 1 and half of Berth No. 2 are along the same entrance channel, where ships are berthed only as an exception or when the port is rather congested. The total length of the North (main) Pier for the berthing of ocean-going vessels is 1,025 m., room enough for 6 to 8 vessels. For administrative reasons the pier is divided into 8 berths of about 128 m. each. Between Berths No. 2 and 3, the pier is bent Southwards. Along the pier there are warehouses which under normal circumstances provide sufficient indoor space.

Along the East Pier, of 350 m. length, there are no warehouses. This pier gives berthing facilities to 3 or 4 middle-sized vessels.

Along the South Pier, of 500 m. length, there are 2 warehouses. This pier is exclusively used for coastwise shipping, fishery and small craft in general.

The dredged channel along the East Pier is only 80 m. wide. This is the only channel which connects the main basin of the port with the South basin of the port, the latter served through the South Pier.

Ro-Ro facilities available.

BULK HANDLING FACILITIES: 400 m. long new pier, designed exclusively for the handling of bulk cargoes.

This bulk cargo pier has an apron of about 25 m. and allows ships with a draft of 10 m. at any time.

Ships moored along this new pier are not able to take water there, but have to be shifted to the general cargo piers in the port of Puerto Cabello.

There is no telephone installation on the new pier.

Tug-boat service and assistance of Pilots is compulsory to negotiate the distance to and from the bulk cargo pier.

General cargo is not allowed to be handled at this pier. There are no cargo handling facilities whatsoever and no kind of rolling equipment either. All the vessels, unless they have up-to-date discharging equipment of their own, have to provide derricks of minimum 5 tons capacity to support the SKT discharging equipment of receivers. The cargo is discharged in bulk cargo trucks, fully closed and with only rather narrow manholes for the SKT arm.

The new grain terminal has been opened. The wharf is 400 m. long and allows 2 vessels to berth. Max. depth 30 ft. Average discharge rate 1,500 tons per day.

TANKERS: *Borburata:* The Maraven Terminal lies about 2 miles East of the port entrance.

Berth No.	*Max. length*	*Max. beam*	*Max. draft*
1	400 ft.	—	20 ft.
2	575 ft.	72 ft.	31 ft.

No. 1 berth is used for bunkering only.

No. 2 berth is used for the discharge of refined products and bulk chemicals. It is fitted with 4×8 in. Chicksans and a range of hoses from 4 in. to 8 in.

A Pilot is compulsory, and boards at Puerto Cabello. If the vessel is cleared outwards at Borburata, the Pilot may return to the pilot station by road.

Berthing and unberthing in daylight only.

Also see "Shipmaster's Report".

Lagoven Terminal: The buoy mooring is used for the discharge of petroleum products. Max. length 198 m. Max. beam 28 m. Max. draft 34 ft., will be increased to 38 ft. Max. Tonnage 40,000 d.w.t. Vessels berth using 5 shackles on the port anchor, and 6 stern lines to 3 mooring buoys.

Terminal Marino Holanda: Consists of 3 buoys situated in a depth of 45 ft. near Guaguaza Lighthouse. Used for loading/discharge of Chemicals.

STEVEDORES: *Straight Time:* Monday to Friday: 0700 – 1100 hrs. and 1300 – 1700 hrs.

Overtime: Monday to Friday: 1800 – 2300 hrs. Normally overtime beyond 2300 hours is not permitted.

Relief Gangs: Obtainable, if there are not too many ships working in the port at a time, from 1100 – 1300 hrs. and 1700 – 1800 hrs.

Work on Sunday: Not permitted except for passenger vessels, and considered as such are those carrying more than 60 passengers, and with a medical doctor on board.

Saturday Afternoon Work: Not permitted. But if a vessel can terminate operation and sail with a maximum of 3 additional hours' work, a special permit can be obtained from Customs and Port Authorities. In such case, the additional working hours are considered straight time work.

FRESH WATER: Available by tanker trucks only.

The drinking water in Puerto Cabello is tropical treated, well-filtered and wholesome.

Every vessel of over 600 nett tons calling at Puerto Cabello, and other ports in Venezuela, should arrange to take water only at Puerto Cabello in order to avoid double water dues.

OPENING/CLOSING HATCHES: Is not performed by the National Port Services, but instead either the ship's crew or hired assistance labour must be used. Recommended that ship's crew open and close hatches.

WATCHMEN: A very careful watch must be maintained in and around the accommodation as ships' safes and cabins have been broken into.

REPAIRS: The adjacent Naval Yard, the entrance to which is within the main port, opposite the North Pier, is equipped for minor repairs both on engine and hull. For emergency purposes, the dry dock could be used. Its capacity is for ships up to 30,000 to 35,000 tons. All repairs on the hull are effected by a special crew transferred from the Naval Yard.

At the dry dock there is 1 crane of 15 tons capacity. Within the Naval Yard there are 2 slipways for ships of 125 ft. length and 210 ft. length max. respectively.

Venezuelan Navy ships always have priority.

REGULATIONS: Port regulations referring to contamination of the port waters will be strictly applied and fines for contravention will be imposed.

No maintenance to bridgehouse, hull or deck should be carried out whilst in port unless special permit issued by the Port Captain has been obtained.

SHIPMASTER'S REPORT: November 1984 (see "Plans").

Vessel: LOA 170 m., beam 26 m.

Berth: Maraven Berth at Borburata.

Pilot: Pilot boards off Puerto Cabello during daylight hours only.

Max. Draft: 32 ft.

Tugs: When berthing, 2 tugs are made fast on the Main Deck fore and aft.

When unberthing 2 tugs are used, 1 tug tows aft and the other stands by forward.

Charts: BA 1523 and 1966.

SHIPMASTER'S REPORT: October 1985.

Depth within the port received from Agent:

PUERTO DE HIERRO: 10.38 N. 62.05 W.

DOCUMENTS:

Last Port Clearance.
6 Crew Lists.
6 Passenger Lists.
6 Stores Lists.
6 Narcotic Drugs Lists.
2 Health Declarations (forms provided and filled by doctor on arrival).
Derat Certificate.

PILOTAGE: Pilot boards at Sea Buoy Lat. 10° 37′ N., Long. 62° 06′ W. If no pilot boat meets vessel on arrival, ship must anchor to wait orders. Send 7 day, 48 and 24 hour ETAs to cable address "Transterm Guiria". Vessels should anchor in the vicinity of Sea Buoy. No radio-telephone available.

ANCHORAGE: Vicinity of Sea Buoy. Good holding ground.

RESTRICTIONS: Vessels may have to wait at anchorage until slack water for docking when tide/current is strong.

MAX. SIZE: Dock, East berth: 30 ft. at LW; 33 ft. at HW; 690 ft. length, 90 ft. beam. Dock, West berth: 19 ft. at LW; 32 ft. at HW; 600 ft. length, 60 ft. beam. Also see "Berthing".

HEALTH: Doctor boards at berth and grants Pratique. Any suspected disease or fever to be reported at that time. Vessels arriving from a Venezuelan port do not require Pratique.

RADIO: La Guaira, Venezuela.

TUGS: None available.

BERTHING: Berthing at times limited to slack water period depending on strength of tides. Pilot will advise.

Bauxite Terminal: Max. draft 37 ft. Depth alongside 40 ft. Max. 40,000 d.w.t. Loading rate 3,000 t.p.h.

STEVEDORES: Bulk cargoes: discharging rate 700 – 800 t.p.h., loading rate 800 – 1,000 t.p.h. No facilities available for handling general cargo.
MEDICAL: No notice required. Venezuelan Navy Hospital with limited medical assistance.
TANKERS: No oil carriers.
DENSITY: LW – 1020. HW – 1023.
FRESH WATER: Available in limited quantities at berth. Rate of delivery 30 t.p.h.
FUEL: In an emergency. Diesel fuel medium, specific gravity at 60°F 0.85, API gravity at 60°F 35, viscosity SSU at 100°F 37, viscosity engler at 20°C 1.40.
CUSTOMS ALLOWANCES: Two cartons of 200 cigarettes each or equivalent in tobacco. Two 0.75 litre bottles.
IDENTIFICATION CARDS: Issued locally by Navy on arrival.
REPAIRS: None. Small company workshop.
CONSULS: None.
AIRPORT: Nearest airport (1 hour voyage on launch) is Guiria with 2 weekly flights to Caracas and the same number to Port of Spain, Trinidad. Next nearest (1 hour launch plus 2 hours car) is Carupano with 4 daily flights to Caracas.
TIME: GMT minus 4 hours all year round.
HOLIDAYS: Cargo worked 24 hours a day, 365 days a year.
GENERAL: The whole of Puerto de Hierro is a Venezuelan Navy Supply Base. The dock and cargo installations are operated by Puerto de Hierro, S.A., a subsidiary of Caribbean Steamship Company, S.A. Only bulk cargoes transhipped by Caribbean Steamship are handled.
DEVELOPMENTS: Possibility of increasing draft to 42 ft. at loading berth, and to 30 ft. at discharging berth.
AUTHORITY: Puerto de Hierro, S.A.

PUERTO LA CRUZ, (Puerto La Cruz Terminal): 10.13 N. 64.38 W. (See Plan)

FLAG: Venezuelan flag must be displayed from the foremast when entering Pozuelos Bay as well as in docking operations regardless of the hour. At all other times the Venezuelan flag must be displayed between sunrise and sunset.
LOCATION: Puerto La Cruz located on Pozuelos Bay on the N.E. coast of Venezuela. Its harbour is well protected by numerous islands against sea currents. The hurricane path is several hundred miles to the North and has never affected the flow of navigation in the Puerto La Cruz area.

The lighthouse marking the entrance to Pozuelos Bay is located: Lat. 10° 18′ 18″ N., Long. 64° 41′ 07″ W. Visibility is 20 miles.
DOCUMENTS: Arrival clearance is effected on board vessel shortly after docking by Government Officials and a representative of the Company.

The following documents are required and should be prepared prior to arrival:

Ship's Register.
Ballast Manifest (1 copy).
Crew List (6 copies).
Passenger and Baggage List, if any (5 copies).
List of Passengers in Transit, if any (5 copies).
List of Personal Effects (4 copies).
Store List* (5 copies).
List of Slop Chests (4 copies).
Sailing Permit issued by Marine Authority at last port of call (Original)..

*Store List should indicate separately all deck, engine and cabin stores.
PILOTAGE: The use of Government Pilots is compulsory for all vessels docking and undocking. The Company will arrange for this service at all times. If it becomes necessary for the Master of the vessel to disregard Pilot's orders in order to ensure safety of the ship a written report from the Master shall be submitted promptly to the Government Port Captain in Spanish. Meneven will assist in translation, when necessary.

The zone for Pilot to board or to anchor awaiting Pilot is delineated by the following 3 lines: South by parallel 10° 15′ N., East by meridian 64° 40′ W., and West by an imaginary line from Punta Puinare on Isla Chimana del Oeste to the North point of Morro de Barcelona.

When ready to dock, a Pilot will be despatched by launch to ship.
RESTRICTIONS: No restrictions on arrival or sailing time.
MAX. SIZE: No limitation is placed on width of tankers. Ships up to 1,000 ft. in length can be turned around in the inner harbour area. Max. safe draft alongside (Berth No. 5) is 55 ft. (Also see "Berthing".)
HEALTH: In theory the Government Port Doctor is to board each incoming vessel and board only outgoing vessels which carry passengers. In practice, however, the doctor boards at his discretion.

Ships cleared between the hours of 1700 – 0800. Mondays through Fridays and all day Saturday, Sundays and holidays are charged by Immigration Service for the issuance of shore leave passes. There is no charge for this service from 0800 – 1700 hrs. Mondays through Fridays. Transportation and immigration clearance fees on movement of seamen are billed at cost.
RADIO: Masters are requested to advise Corpoven Puerto La Cruz by radio 72 hours in advance of estimated arrival giving vessel's name, date and hour of arrival, bunkers, name of Master, port of departure, draft (arrival), Venezuelan gross tonnage, flag of ship. Vessels may contact the terminal by radio-telephone on 2182 kHz and VHF Channel 16. There is standby attention 24 hours a day. The terminal also has the frequencies 2080, 2120, 2638, 2738 and VHF Channel 13.

Ship-to-shore radios are installed on the oil dock and on both tugs. A 350-watt AM transmitter-receiver is monitored 24 hours a day.
TUGS: The use of 2 tugs is compulsory for all vessels over 145 m. LOA. The Company has available a first-class diesel-electric tug of 1,600 h.p. and a contract tug of 2,100 h.p.

BERTHING: The loading facilities consist of 6 berths. Products available and safe draft are as follows:

	Berth 1	*2*	*3*	*4*	*5*	*6**
Crudes	×	×	×	×	×	×
Heavy fuel oil					×	
Refined products		×	×	×		×
LPG		×				
Bunker "C" fuel	×	×	×	×	×	
Diesel fuel	×	×	×	×	×	
Intermediate fuels	×	×	×	×	×	
Fresh water	×	×	×	×	×	×
Max. safe draft (ft.)	38	38	38	55	55	40
Max. d.w.t. (thous.)	45	45	45	110	110	60
Max. LOA (ft.)	750	750	750	950	950	750

*El Chaure Terminal – Now Pier No. 6. Also see "El Chaure".

Upon arrival at dock the following rules must be observed:

(a) Masters must ensure that mooring lines are properly tended during the discharge of ballast and loading of cargo, and that sufficient personnel are on board at all times to handle same. Discharging or loading will be temporarily suspended upon infringement of this regulation.

(b) Masters are requested to remove the blank flanges from their vessel's loading manifold before docking, so as to expedite the connecting of the shore hoses by company personnel. Vessels using berth No. 5 are also requested to have their derrick and gangway ready for use.

Note: Vessels normally dock with starboard side to dock, unless otherwise advised.

(c) While docked, discharge of sea water, hot water or steam on dockside of ship is prohibited. Hot water or steam may activate the automatic sprinkler system as well as damage piping located under the dock surface.

(d) Rat-guards must be placed on all ropes connected with the shore.

(e) Heavy exhaust smoke from vessel's funnel is not permitted. Any infringement of this rule will result in Government fine and/or removal of ship from dock.

(f) Meals must be provided in officers' mess-room for Venezuelan National Guard personnel who may be assigned to the vessel during stay in port.

LOADING: After the vessel has been cleared, the Company Dock Supervisor on watch will give the Master of the vessel written instructions as to grade or grades of cargo, loading rates, information on size of hoses and lines, and other information pertinent to the loading of the vessel.

During loading operations, company employees are on watch to administer to the needs of each vessel.

Upon termination of loading cargo of crude or fuel oil, hoses are normally displaced with air at controlled rates prior to disconnecting. If the ship's officers request that the alternate procedure of draining hoses be effected, shore personnel will be happy to comply provided the following steps are observed by ship's officers:

1. Advice be received prior to termination of loading cargo.
2. Ship's receptacles be situated to receive oil drained on board. It should be noted that heavy fines are imposed for spills or overflows which contaminate the bay.

Shortly after completion of loading, company personnel together with ship's officer will take ship's ullages and, later, deliver cargo and sailing papers to an officer of the vessel.

Ships must vacate berth upon completion of loading and await papers at anchorage if the berth is needed for another vessel. The Dock Supervisor on duty will advise ship's officer on this matter.
BALLAST: Although climatic conditions in Puerto La Cruz are relatively mild, vessels should arrive with sufficient ballast to permit safe handling. Venezuelan regulations strictly prohibit the pumping overboard of dirty ballast in territorial waters. All ballast must be pumped ashore with the exception of vessels especially equipped with clean segregated systems which are reserved for ballast only. Vessels so equipped will be permitted to pump overboard after first being inspected and approved by shore personnel. Heavy fines are imposed for pollution of waters and industrial fishermen are quick to report any infringement. Max. discharge pressure to shore installations is 90 p.s.i. through the 16 in. line which dumps into ballast lakes approximately 300 m. South of dock.

No vessel will be allowed to discharge ballast if any of the following conditions exist:

(a) Last previous cargo was sour crude/product and/or could result in unpleasantness to area inhabitants.

(b) Ballast has lead gasoline, naphtha and/or other volatile residue which may cause an explosive atmosphere at the open ballast pit.

(c) Last previous cargo had to be heated and/or pour point was higher than 80°F. This will be verified by the laboratory.
MEDICAL: All requests for medical or dental treatment must be accompanied by a written request from the Master to the vessel's Agent.
FRESH WATER: Fresh chlorinated water is available at an average rate of approximately 2 t.p.h. Total volume of water that can be supplied during the normal period alongside averages about 150 tons. As water is not held in special reserve for vessels' requirements but supplied from terminal water system, availability may be limited dependent on time of year and other conditions.
FUEL: The terminal is not a general bunker station. Only ships loading petroleum or its products may take bunkers.

Bunker "C", heavy diesel fuel and complete range of intermediate fuels are available in reasonable quantities. Delivery rates to the ships are approximately as follows: Bunker "C", 200 t.p.h.; heavy diesel, 150 t.p.h.; intermediate fuels, 150 t.p.h.

Bunkers are delivered concurrent with the cargo and should be taken as soon as clearance is granted.

Meters are installed on all bunker systems and are calibrated in net barrels; except diesel meters which indicate gross barrels.

The dock valves on the bunker lines will only be opened and closed upon advice from the ship's personnel.

Lubricants and gasoil are available through the vessel's Agent.

PUERTO CABELLO (inc. Borburata): 10.29 N. 68.01 W. (See Plan)

DOCUMENTS:

Last Port Clearance.

Terminal Marino Holanda: Consists of 3 buoys situated in a depth of 45 ft. near Guaguaza Lighthouse. Used for loading/discharge of Chemicals.

STEVEDORES: *Straight Time:* Monday to Friday: 0700 – 1100 hrs. and 1300 – 1700 hrs.

Overtime: Monday to Friday: 1800 – 2300 hrs. Normally overtime beyond 2300 hours is not permitted.

Relief Gangs: Obtainable, if there are not too many ships working in the port at a time, from 1100 – 1300 hrs. and 1700 – 1800 hrs.

Work on Sunday: Not permitted except for passenger vessels, and considered as such are those carrying more than 60 passengers, and with a medical doctor on board.

Saturday Afternoon Work: Not permitted. But if a vessel can terminate operation and sail with a maximum of 3 additional hours' work, a special permit can be obtained from Customs and Port Authorities. In such case, the additional working hours are considered straight time work.

FRESH WATER: Available by tanker trucks only.

The drinking water in Puerto Cabello is tropical treated, well-filtered and wholesome.

Every vessel of over 600 nett tons calling at Puerto Cabello, and other ports in Venezuela, should arrange to take water only at Puerto Cabello in order to avoid double water dues.

OPENING/CLOSING HATCHES: Is not performed by the National Port Services, but instead either the ship's crew or hired assistance labour must be used. Recommended that ship's crew open and close hatches.

WATCHMEN: A very careful watch must be maintained in and around the accommodation as ships' safes and cabins have been broken into.

REPAIRS: The adjacent Naval Yard, the entrance to which is within the main port, opposite the North Pier, is equipped for minor repairs both on engine and hull. For emergency purposes, the dry dock could be used. Its capacity is for ships up to 30,000 to 35,000 tons. All repairs on the hull are effected by a special crew transferred from the Naval Yard.

At the dry dock there is 1 crane of 15 tons capacity. Within the Naval Yard there are 2 slipways for ships of 125 ft. length and 210 ft. length max. respectively.

Venezuelan Navy ships always have priority.

REGULATIONS: Port regulations referring to contamination of the port waters will be strictly applied and fines for contravention will be imposed.

No maintenance to bridgehouse, hull or deck should be carried out whilst in port unless special permit issued by the Port Captain has been obtained.

SHIPMASTER'S REPORT: November 1984 (see "Plans").
Vessel: LOA 170 m., beam 26 m.
Berth: Maraven Berth at Borburata.
Pilot: Pilot boards off Puerto Cabello during daylight hours only.
Max. Draft: 32 ft.
Tugs: When berthing, 2 tugs are made fast on the Main Deck fore and aft.

When unberthing 2 tugs are used, 1 tug tows aft and the other stands by forward.

Charts: BA 1523 and 1966.

SHIPMASTER'S REPORT: October 1985.

Depth within the port received from Agent:

Entrance to the Harbour	31 ft. 6 in.
Pier No. 1	31 ft. 6 in.
Pier No. 2	31 ft. 6 in.
Pier No. 3	31 ft. 6 in.
Pier No. 4	27 ft. 0 in.
Pier No. 5	27 ft. 0 in.
Pier No. 6	31 ft. 0 in.
Pier No. 7	33 ft. 0 in.
Pier No. 8	32 ft. 0 in.
Pier No. 9	32 ft. 0 in.
Pier No. 10	27 ft. 0 in.
Pier No. 11	27 ft. 0 in.

Pier Nos. 38 and 39	30 ft. 0 in.
Pier Nos. 40, 41 and 42	32 ft. 0 in.

AGENT: Head Office (Direction and Control). Brokers, Chartering and Tramp Agents, Victor H. Selinger, S.A., PO Box 1632, Caracas, 1010–A Venezuela. Cables: "Selvic" or "Seltank". Tel. (02) 810271. Telex: 21402, 22859, 21631, 21934. Local Office: PO Box 174 Puerto Cabello. Tel. (042) 63750, (042) 63549. Cables: "Selvic Puertocabello" or "Seltank Puertocabello". Telex: 42479.

PUERTO DE HIERRO: 10.38 N. 62.05 W.

DOCUMENTS:

Last Port Clearance.
6 Crew Lists.
6 Passenger Lists.
6 Stores Lists.
6 Narcotic Drugs Lists.
2 Health Declarations (forms provided and filled by doctor on arrival).
Derat Certificate.

PILOTAGE: Pilot boards at Sea Buoy Lat. 10° 37′ N., Long. 62° 06′ W. If no pilot boat meets vessel on arrival, ship must anchor to wait orders. Send 7 day, 48 and 24 hour ETAs to cable address "Transterm Guiria". Vessels should anchor in the vicinity of Sea Buoy. No radio-telephone available.

ANCHORAGE: Vicinity of Sea Buoy. Good holding ground.

RESTRICTIONS: Vessels may have to wait at anchorage until slack water for docking when tide/current is strong.

MAX. SIZE: Dock, East berth: 30 ft. at LW; 33 ft. at HW; 690 ft. length, 90 ft. beam. Dock, West berth: 19 ft. at LW; 32 ft. at HW; 600 ft. length, 60 ft. beam. Also see "Berthing".

HEALTH: Doctor boards at berth and grants Pratique. Any suspected disease or fever to be reported at that time. Vessels arriving from a Venezuelan port do not require Pratique.

RADIO: La Guaira, Venezuela.

TUGS: None available.

BERTHING: Berthing at times limited to slack water period depending on strength of tides. Pilot will advise.

Bauxite Terminal: Max. draft 37 ft. Depth alongside 40 ft. Max. 40,000 d.w.t. Loading rate 3,000 t.p.h.

STEVEDORES: Bulk cargoes: discharging rate 700 – 800 t.p.h., loading rate 800 – 1,000 t.p.h. No facilities available for handling general cargo.
MEDICAL: No notice required. Venezuelan Navy Hospital with limited medical assistance.
TANKERS: No oil carriers.
DENSITY: LW – 1020. HW – 1023.
FRESH WATER: Available in limited quantities at berth. Rate of delivery 30 t.p.h.
FUEL: In an emergency. Diesel fuel medium, specific gravity at 60°F 0.85, API gravity at 60°F 35, viscosity SSU at 100°F 37, viscosity engler at 20°C 1.40.
CUSTOMS ALLOWANCES: Two cartons of 200 cigarettes each or equivalent in tobacco. Two 0.75 litre bottles.
IDENTIFICATION CARDS: Issued locally by Navy on arrival.
REPAIRS: None. Small company workshop.
CONSULS: None.
AIRPORT: Nearest airport (1 hour voyage on launch) is Guiria with 2 weekly flights to Caracas and the same number to Port of Spain, Trinidad. Next nearest (1 hour launch plus 2 hours car) is Carupano with 4 daily flights to Caracas.
TIME: GMT minus 4 hours all year round.
HOLIDAYS: Cargo worked 24 hours a day, 365 days a year.
GENERAL: The whole of Puerto de Hierro is a Venezuelan Navy Supply Base. The dock and cargo installations are operated by Puerto de Hierro, S.A., a subsidiary of Caribbean Steamship Company, S.A. Only bulk cargoes transhipped by Caribbean Steamship are handled.
DEVELOPMENTS: Possibility of increasing draft to 42 ft. at loading berth, and to 30 ft. at discharging berth.
AUTHORITY: Puerto de Hierro, S.A.

PUERTO LA CRUZ, (Puerto La Cruz Terminal):
10.13 N. 64.38 W. **(See Plan)**

FLAG: Venezuelan flag must be displayed from the foremast when entering Pozuelos Bay as well as in docking operations regardless of the hour. At all other times the Venezuelan flag must be displayed between sunrise and sunset.
LOCATION: Puerto La Cruz located on Pozuelos Bay on the N.E. coast of Venezuela. Its harbour is well protected by numerous islands against sea currents. The hurricane path is several hundred miles to the North and has never affected the flow of navigation in the Puerto La Cruz area.

The lighthouse marking the entrance to Pozuelos Bay is located: Lat. 10° 18′ 18″ N., Long. 64° 41′ 07″ W. Visibility is 20 miles.
DOCUMENTS: Arrival clearance is effected on board vessel shortly after docking by Government Officials and a representative of the Company.

The following documents are required and should be prepared prior to arrival:

Ship's Register.
Ballast Manifest (1 copy).
Crew List (6 copies).
Passenger and Baggage List, if any (5 copies).
List of Passengers in Transit, if any (5 copies).
List of Personal Effects (4 copies).
Store List* (5 copies).
List of Slop Chests (4 copies).
Sailing Permit issued by Marine Authority at last port of call (Original)..

*Store List should indicate separately all deck, engine and cabin stores.
PILOTAGE: The use of Government Pilots is compulsory for all vessels docking and undocking. The Company will arrange for this service at all times. If it becomes necessary for the Master of the vessel to disregard Pilot's orders in order to ensure safety of the ship a written report from the Master shall be submitted promptly to the Government Port Captain in Spanish. Meneven will assist in translation, when necessary.

The zone for Pilot to board or to anchor awaiting Pilot is delineated by the following 3 lines: South by parallel 10° 15′ N., East by meridian 64° 40′ W., and West by an imaginary line from Punta Puinare on Isla Chimana del Oeste to the North point of Morro de Barcelona.

When ready to dock, a Pilot will be despatched by launch to ship.
RESTRICTIONS: No restrictions on arrival or sailing time.
MAX. SIZE: No limitation is placed on width of tankers. Ships up to 1,000 ft. in length can be turned around in the inner harbour area. Max. safe draft alongside (Berth No. 5) is 55 ft. (Also see "Berthing".)
HEALTH: In theory the Government Port Doctor is to board each incoming vessel and board only outgoing vessels which carry passengers. In practice, however, the doctor boards at his discretion.

Ships cleared between the hours of 1700 – 0800. Mondays through Fridays and all day Saturday, Sundays and holidays are charged by Immigration Service for the issuance of shore leave passes. There is no charge for this service from 0800 – 1700 hrs. Mondays through Fridays. Transportation and immigration clearance fees on movement of seamen are billed at cost.
RADIO: Masters are requested to advise Corpoven Puerto La Cruz by radio 72 hours in advance of estimated arrival giving vessel's name, date and hour of arrival, bunkers, name of Master, port of departure, draft (arrival), Venezuelan gross tonnage, flag of ship. Vessels may contact the terminal by radio-telephone on 2182 kHz and VHF Channel 16. There is standby attention 24 hours a day. The terminal also has the frequencies 2080, 2120, 2638, 2738 and VHF Channel 13.

Ship-to-shore radios are installed on the oil dock and on both tugs. A 350-watt AM transmitter-receiver is monitored 24 hours a day.
TUGS: The use of 2 tugs is compulsory for all vessels over 145 m. LOA. The Company has available a first-class diesel-electric tug of 1,600 h.p. and a contract tug of 2,100 h.p.

BERTHING: The loading facilities consist of 6 berths. Products available and safe draft are as follows:

	Berth 1	*2*	*3*	*4*	*5*	*6**
Crudes	×	×	×	×	×	×
Heavy fuel oil					×	
Refined products		×	×	×		×
LPG		×				
Bunker "C" fuel	×	×	×	×	×	
Diesel fuel	×	×	×	×	×	
Intermediate fuels	×	×	×	×	×	
Fresh water	×	×	×	×	×	×
Max. safe draft (ft.)	38	38	38	55	55	40
Max. d.w.t. (thous.)	45	45	45	110	110	60
Max. LOA (ft.)	750	750	750	950	950	750

*El Chaure Terminal – Now Pier No. 6. Also see "El Chaure".

Upon arrival at dock the following rules must be observed:

(a) Masters must ensure that mooring lines are properly tended during the discharge of ballast and loading of cargo, and that sufficient personnel are on board at all times to handle same. Discharging or loading will be temporarily suspended upon infringement of this regulation.

(b) Masters are requested to remove the blank flanges from their vessel's loading manifold before docking, so as to expedite the connecting of the shore hoses by company personnel. Vessels using berth No. 5 are also requested to have their derrick and gangway ready for use.
Note: Vessels normally dock with starboard side to dock, unless otherwise advised.

(c) While docked, discharge of sea water, hot water or steam on dockside of ship is prohibited. Hot water or steam may activate the automatic sprinkler system as well as damage piping located under the dock surface.

(d) Rat-guards must be placed on all ropes connected with the shore.

(e) Heavy exhaust smoke from vessel's funnel is not permitted. Any infringement of this rule will result in Government fine and/or removal of ship from dock.

(f) Meals must be provided in officers' mess-room for Venezuelan National Guard personnel who may be assigned to the vessel during stay in port.

LOADING: After the vessel has been cleared, the Company Dock Supervisor on watch will give the Master of the vessel written instructions as to grade or grades of cargo, loading rates, information on size of hoses and lines, and other information pertinent to the loading of the vessel.

During loading operations, company employees are on watch to administer to the needs of each vessel.

Upon termination of loading cargo of crude or fuel oil, hoses are normally displaced with air at controlled rates prior to disconnecting. If the ship's officers request that the alternate procedure of draining hoses be effected, shore personnel will be happy to comply provided the following steps are observed by ship's officers:

1. Advice be received prior to termination of loading cargo.
2. Ship's receptacles be situated to receive oil drained on board. It should be noted that heavy fines are imposed for spills or overflows which contaminate the bay.

Shortly after completion of loading, company personnel together with ship's officer will take ship's ullages and, later, deliver cargo and sailing papers to an officer of the vessel.

Ships must vacate berth upon completion of loading and await papers at anchorage if the berth is needed for another vessel. The Dock Supervisor on duty will advise ship's officer on this matter.
BALLAST: Although climatic conditions in Puerto La Cruz are relatively mild, vessels should arrive with sufficient ballast to permit safe handling. Venezuelan regulations strictly prohibit the pumping overboard of dirty ballast in territorial waters. All ballast must be pumped ashore with the exception of vessels especially equipped with clean segregated systems which are reserved for ballast only. Vessels so equipped will be permitted to pump overboard after first being inspected and approved by shore personnel. Heavy fines are imposed for pollution of waters and industrial fishermen are quick to report any infringement. Max. discharge pressure to shore installations is 90 p.s.i. through the 16 in. line which dumps into ballast lakes approximately 300 m. South of dock.

No vessel will be allowed to discharge ballast if any of the following conditions exist:

(a) Last previous cargo was sour crude/product and/or could result in unpleasantness to area inhabitants.

(b) Ballast has lead gasoline, naphtha and/or other volatile residue which may cause an explosive atmosphere at the open ballast pit.

(c) Last previous cargo had to be heated and/or pour point was higher than 80°F. This will be verified by the laboratory.
MEDICAL: All requests for medical or dental treatment must be accompanied by a written request from the Master to the vessel's Agent.
FRESH WATER: Fresh chlorinated water is available at an average rate of approximately 2 t.p.h. Total volume of water that can be supplied during the normal period alongside averages about 150 tons. As water is not held in special reserve for vessels' requirements but supplied from terminal water system, availability may be limited dependent on time of year and other conditions.
FUEL: The terminal is not a general bunker station. Only ships loading petroleum or its products may take bunkers.

Bunker "C", heavy diesel fuel and complete range of intermediate fuels are available in reasonable quantities. Delivery rates to the ships are approximately as follows: Bunker "C", 200 t.p.h.; heavy diesel, 150 t.p.h.; intermediate fuels, 150 t.p.h.

Bunkers are delivered concurrent with the cargo and should be taken as soon as clearance is granted.

Meters are installed on all bunker systems and are calibrated in net barrels; except diesel meters which indicate gross barrels.

The dock valves on the bunker lines will only be opened and closed upon advice from the ship's personnel.

Lubricants and gasoil are available through the vessel's Agent.

CUSTOMS: Crew members should be warned against taking knives or other lethal weapons ashore, as this is strictly prohibited. All firearms and ammunition must be noted on stores list. They cannot exceed 1 per officer and 18 cartridges per gun. No arms may be carried while ship is in Venezuelan waters or tied up at dock. Contraband of any description will be confiscated. Each man is allowed 1 package of cigarettes on his person and this package must be opened. No liquor is to be taken ashore. It is prohibited to carry liquor from shore to ship without authorisation from Master of vessel. It is further strictly prohibited to consume liquor in dock area.

It is normally forbidden to take photographic cameras ashore. However, upon written request to the National Guard contingent on the oil dock, special permission may be obtained. This is subject to 2 limitations: (1) that the camera is returned to the ship; (2) that no photographs are taken of the petroleum installations.

IDENTITY CARDS: Passes for shore leave are issued by the officials of the "Capitania de Puerto", who board with the Customs authorities upon the vessel's arrival at dock. These passes are valid for the duration of the vessel's stay in port and must be returned before sailing to the guard assigned to the vessel.

In order to comply with Immigration Regulations, crews should be carefully checked before sailing, and any missing seamen reported to the vessel's Agent. Crew members left behind when the vessel sails will be held in custody until deported at the vessel's expense.

CONSULS: The following foreign countries have consular offices in the vicinity of Puerto La Cruz:

Belgium
Brazil
Colombia
Denmark
France
Great Britain
Italy
Netherlands
Norway
Sweden

Vessel's Agent should be appraised of vessel's consular requirements promptly upon docking.

REPAIRS: Request for repair work by local contractors must be accompanied by a written request from the Master of the vessel.

REPATRIATION: Seamen discharged from hospital for transfer to another port, seamen arriving from another port or those being repatriated are handled by the vessel's Agent, who must comply with all Venezuelan Regulations.

In the case of seamen left ashore for any reason, Masters are requested to furnish a letter accepting responsibility for all expenses incurred, advances if any, and instructions for repatriation. Venezuelan regulations, at all times hold the vessel responsible for a seaman during his stay in the country. Close contact is maintained by radio with ship owners regarding disposition of their seamen.

TIME: GMT minus 4 hours all year round.

REGULATIONS:

Excessive Smoke. It is absolutely prohibited to exhaust heavy smoke through a ship's funnel while tied up at the Company's docks. It is also prohibited to blow boiler tubes. Failure to comply with this regulation will result in any or all of the following actions:

1. Vessel's discharge of ballast or loading of crude or products will be immediately shut down.
2. Vessel will be subject to fine from authorities.
3. Vessel may be removed from dock.
4. Ship's Agent will be advised of infractions of this regulation.
5. Fines, time lost, and other related expenses will be charged against the vessel.

Pollution. Venezuelan laws are very strict on this subject and local authorities quickly enforce existing statutes. For this reason each Master is handed a circular that emphasises the necessity of complying with federal and local laws and customs.

The spilling or discharge of dirty ballast, crude oil or petroleum products into coastal waters is defined as pollution, as is also the throwing overboard of garbage, trash or other unwanted objects while the vessel is at anchor or dockside. Prior to the start of loading operations all discharge valves, bilges and scuppers must be closed and strict vigilance exercised during deballasting and loading operations.

When a spill does occur, the Master, Government officials and a company representative evaluate the quantity and submit a report to the Government Petroleum Inspector. This report becomes the basis for a federal fine that is practically incontestable. An additional expense occurs when local authorities require assistance in cleaning beaches and shorelines after a major spill and can pinpoint the responsible vessel or source.

TONNAGE CERTIFICATE: Due to reciprocal agreements between Venezuela and the following countries, ships flying the flag of any of the below-named countries are exempted from Arqueo compliance and payment of fees: Denmark, Great Britain, France, Germany F.R., Netherlands, Norway, Portugal, Sweden, United States.

Ships bearing the flag of any other nation shall require a Venezuelan Arqueo Certificate. The cost of measuring is contingent on the size and tonnage of vessel. The certificate is usually issued after the ship sails from port. It is then sent to the marine department of the Owners of the vessel by airmail.

BANKS: Banco Royal Venezolano. Tel: (081) 691921.

Cash: The local currency is the Bolivar.

Foreign currency may be exchanged at local banks. Local banks are open Monday to Friday from 0830 – 1130 hrs. and from 1400 – 1630 hrs., except holidays.

STORING: See "Prelims".

1. Vessel can be stored by truck.
2. No need for barge storing while ship is alongside.
3. Trucks can proceed to the berth gate only. Distance from gate to ships berth 200 ft.
4. Fork lift trucks cannot be permitted inside the berth while the ship is either deballasting or loading.
   No fork lift trucks whatsoever permitted alongside LPG ships.
5. No Customs regulations in force regarding storing.
6. Local riggers can be employed to assist with storing through ship's local Agent.

EMERGENCY CO-ORDINATION CENTRE: Seccion de Seguridad, Busqueda y Salvamento Maritimo. Telex: 31154. Tel: (02) 513395, 512156.

SURVEYORS: 1. Saybolt, Caleb Brett, Chass Martin, Aivepet cargo inspectors available at the Terminal Office.

2. Lloyd's Register, American Bureau, Bureau Veritas, P & I available locally or from Caracas via the ship's agent.

TELEPHONES: There is a telephone booth on each dock. The supervisor on duty may be contacted by calling number 308 or 906.

GENERAL:

No charts or sailing directions are available in the terminal. Same should be forwarded by airmail to the vessel's Agent for delivery to the ship.

All ship requirements such as chandlery supplies, mail, cash advances, medical, dental, consular requirements, repair work, laundry service, bonded stores, transportation etc. should be obtained through the vessel's Agent.

Local authorities strictly forbid the throwing overboard of garbage, trash or any objects while anchored or docked, and they also forbid the exchange of articles between crew members and the occupants of adjacent small craft.

Corpoven as operator of the Terminal charges a fixed fee for General Services such as supervising the docking and undocking manoeuvres, hose connections, loading and documents required by the cargo buyers or consignee. Handling of Telexes, documents and air postage will be charged at cost.

Offices of Corpoven loading and marine personnel are located on the first floor of the building between berths Nos. 1 and 2. Any matter concerning loading, bunkering, is handled through this office, which is open 24 hours of every day. On the ground floor of this same building is the Documentation Section.

SHIPMASTER'S REPORT: February 1979.

Documents:

3 Copies of list of passengers or nil passengers.
3 copies of a letter by Master stating that vessel was diverted after sailing from previous port and explaining why clearance destination is wrong.
3 copies of cable ordering diversion.

Anchorages: Good holding ground in N.W. part of anchorage area, thick mud.

Restrictions: Maximum height of manifold about 18.95 m. so necessary for vessels of 140,000 d.w.t. to load some cargo before completion of ballast.

Max. Size: If draft less than 30 ft. on arrival vessel can approach berth direct from West, and use 2 tugs. If more than 30 ft. draft then vessel must use channel to the North of berth and use 3 or 4 tugs. This for vessels of 140,000 d.w.t.

VHF: Tankers call "Meneven" on Channel 16, then change to Channel 12 or 13. Also call Agents on Channel 16.

Berthing: Back springs to bollards on jetty. Breasts and heads and stern lines to hooks on dolphins. These hooks are secured to bollards by wire of circumference 19 cm. or diameter 6 cm.

Consuls: No U.S. Consul available and Agents will give Master letter to this effect for U.S. Immigration.

General: Ballast, if clean, may be pumped overside. If dirty, advise Meneven prior to arrival of quantities to be pumped ashore. They will also accept slops if not sour crude or smelling too badly.

Notice to Shipmasters:

We wish to advise the Masters of all vessels calling at this port that it is strictly prohibited to take photographs.

It is likewise contrary to regulations to carry ashore a camera. Same is liable to be confiscated by the Government Authorities.

Signed S. A. Meneven.

AGENCY:

All incoming ships to lift cargoes at this Terminal must have a local Agent to render all services required for a prompt and efficient tanker turnaround and to cancel all ships disbursements during the port stay.

AUTHORITY: Capitan de Puerto, Capitania de Puerto, Guanta, Puerto La Cruz. *Tel:* 081-660534, 081-660367. *Telex:* Capipuerto 81386.

OPERATOR: Corpoven S.A.

PUERTO SUCRE (Cumana): 10.28 N. 64.12 W.

(See Plan)

SHIPMASTER'S REPORT: August 1980.

DOCUMENTS: As for Guanta. Entry formalities, normally after berthing but if at anchor will board about 0900 hrs.

PILOTAGE: Pilotage is compulsory for berthing and unberthing. Pilot will anchor vessel if required.

APPROACHES: Approaching Puerto Sucre at night, the lights of the city are visible for many miles, but the light indicated at the end of the pier is non-existent, also the water tower marked on the chart with red lights is non-existent.

Two vessels were alongside when this vessel approached so the pier was clearly visible with the lights of the ships, otherwise there are no lights on the pier.

The pier indicated on the chart just North of the main pier is no longer there although at low water parts of the supports are still visible. Further North there are 3 piers, approximately half cable long, used by fishing boats. They start approximately 1 cable North and 1 cable between each, also there are car ferry terminals before the mouth of the river South of Pta. Carenero. This river mouth is undergoing extensive work which is apparently to be a fishing harbour.

A tall white building is situated in approximate position Lat. 10° 27.8′ N., Long. 64° 11.1′ W., it has a fixed red light and an occulting red light at night. A silo is situated in approximate position Lat. 10° 26.7′ N., Long. 64° 11.25′ W., this has 3 red lights in a horizontal line at night. There is an air light on the control tower at the airport, alternating white and green every 5 seconds, but this is only lit when an aircraft is due.

ANCHORAGE: Anchorage is limited in pilotage area "A". This vessel anchored 3 cables off the shore line and 3 cables off the pier in 30 fathoms of water, vessels also anchor 2.5 to 3 miles S.W. of pier in 25 fathoms, however Pilots prefer vessels to use nearer anchorage.

VHF: Pilots occasionally on Channel 16, but very little English spoken. The ship's chandler has a VHF set and can be very helpful as he speaks very good English.

TUGS: One tug is available to assist with berthing/unberthing.

BERTHING: Vessels use both sides of the pier and Ro/Ro vessels tie up stern to the head of the pier. Soundings were taken around the pier (See Plan).

CARGO HANDLING FACILITIES: There are numerous fork lift trucks of all sizes, 4 mobile cranes and some small towing vehicles. This vessel had a cargo of bagged fertiliser which was discharged onto lorries and there was no shortage of these, even when working 2 ships with 10 gangs no delays were caused due to lack of transport. Ship's gear is used at all times but the mobile cranes can be hired if required.

MEDICAL: Services available.

FRESH WATER: Available using ship's hoses.

FUEL: Diesel oil is available but difficult to obtain as it has to be brought from Puerto la Cruz by road tankers.

WATCHMEN: Not available, one member of National Guard on board, requires a cabin if one available. This vessel had no spare accommodation but the guard must still be fed.

SHORE LEAVE: Permitted, but shore passes must be carried and passes returned when vessel leaves.

GENERAL: *Provisions and Laundry:* Available.

Garbage Disposal: No facilities.

PUNTA CARDON: 11.38 N. 70.14 W.

OPERATORS: Maraven, S.A.

PORT LIMITS: The area enclosed by the parallels of Lat. 11° 38′ 00″ N. and Lat. 11° 36′ 38″ N. and the meridian of Long. 70° 14′ 25″ W.

FLAG: It is compulsory to display the Venezuelan flag at the foremast starboard yardarm during daylight hours for ships anchored or berthed in Venezuelan waters. The ship's Services will provide a Venezuelan flag at any time for ship's account.

LOCATION: The port of Punta Cardon is located on the Gulf of Venezuela, on S.W. coast of Paraguana Peninsula, Venezuela. Punta Cardon is an open sea port with practically no swell, due to the Easterly winds prevailing almost all year from the shore side.

ESSENTIAL REQUIREMENTS:

1. Incoming vessels must send ETA at least 3 days before arrival at Punta Cardon.
2. If a ship, originally cleared for another port (including any other Venezuelan port) is diverted at sea to Punta Cardon, certain information must be radioed prior to arrival in order to avoid heavy fine(s) and/or delays.
3. No dirty ballast may be pumped overside in port in Venezuelan coastal waters. Ballast disposal facilities are available at Punta Cardon Terminal.
4. The use of Venezuelan Government Pilots is compulsory for berthing and unberthing.
5. In addition to other clearance documents, 5 copies of an itemised list of articles in the ship's slop chest must be presented to the authorities on arrival.
6. The emergency fire signal is 5 long blasts on the ship's whistle or siren. No other signal is to be given in cases of emergency.
7. Rat-guards must be placed on all mooring lines.

DOCUMENTS: Clearance (inward Pratique). Inward clearance is effected on board by Government Port and Customs Officials and a representative of the Oil Movements Department immediately after berthing. The following documents must be ready on arrival:

(1) In ballast:

(a) Clearance from Last Port (1 copy).
(b) Ballast Manifest from Last Port (1 copy).
(c) Crew List (7 copies).
(d) Steward's Store List (all foodstuff, liquors, tobacco, etc.), to be declared on a separate and independent sheet (5 copies, see note (2)).
(e) Deck and Engine Stores and Spare Parts List (paints, varnishes, chains, ropes, etc.), to be declared on a separate and independent sheet (5 copies, see note (2)).
(f) Medicine Chest Lists (including narcotics accurately itemised) (5 copies).
(g) Slop Chest Lists (5 copies).
(h) Personal Effects Lists (4 copies).
(i) Sailing Permit (issued by Maritime Authority at Last Port of call) (1 copy).
(j) Passenger and Baggage Lists (if any) (2 copies).
(k) List of Passengers in transit (if any) (4 copies).

(2) Both the Steward's Store List, the Deck and Engine Stores and Spare Parts List may be prepared on board prior to the vessel's arrival. The Steward's Stores List must be comprehensive and accurate, especially with regard to cigarettes and liquor. All new clothing, gifts, souvenirs, etc. are to be clearly marked. All personal effects of the crew are to be collected and placed in the Bonded Stores Locker, ready for sealing by the Customs Authorities on arrival.

Although vessels proceed directly to Punta Cardon, clearance documents should be made out showing the port as "Las Piedras, Paraguana (Punta Cardon)". Failure to comply with this requirement may result in fines up to a max. of U.S. $600.00.

(3) Clearance documents out-bound: Outward clearance and cargo documents are delivered on board by the Ship's Services Representative.

In the event that the berth is required by another vessel, a vessel having completed loading may be required to vacate the berth promptly and proceed to anchorage to await cargo documents and clearance.

PILOTAGE: Pilots are employees of Venezuelan Government and pilotage is compulsory for vessels entering or leaving harbour. The Ship's Services Office will arrange for this service at any time. If it becomes necessary for Master of the vessel to disregard Pilot's orders in order to ensure safety to the ship, the Master must promptly submit a written report to the Harbour Master on the matter, via the Ship's Services Representative, stating reason for this action.

Pilots sustaining injuries: It is compulsory to submit a full report in cases where a Pilot is injured while performing duties on board vessels.

Agent's Notice to Masters: Dated July 1986.

Subject: Pilot Service from/to Punta Cardon

Harbour Master's Office has issued new regulations. Here below are mentioned regulations:

1. Pilot service from Punta Cardon is only compulsory when Masters are crossing the channel of Lake Maracaibo for the first time. If this is not the case, the Pilot should be then embarked at San Carlos.
2. Upon your request this Pilot service can be arranged by the Agency.
3. On departure, Pilot service to Punta Cardon is not required.
4. If Official Pilot is unable to disembark at San Carlos due to difficulties on board or by *force majeure,* or if you decide to change the instructions given to the Agency with regard to Pilot disembarking San Carlos, a letter addressed to the Harbour Master stating your reasons should be handed to the Pilot before he disembarks in Cardon.

Master's Note: With regard to the above, on reflection the content of the letter from Agent may not be too clear to those not familiar with this area. At risk of stating the obvious, what this Notice is saying is that pilotage inwards from the "Em" Buoy, to the San Carlos Pilot Station is only necessary on the Master's first visit to a Lake Maracaibo Port. Thereafter he may navigate the Outer Channel without a Pilot. The Outer Channel Pilot is taken at Punta Cardon on the inward passage, and disembarked there on the outward passage, should a Pilot be so required.

ANCHORAGE: The anchorage at Cardon roads within a radius of 2 miles from end of jetties has depths varying from 54 ft. to 100 ft. (LWS) and a bottom consisting of mud with some patches of small stones, sand and shells. There are no known obstructions from West to N.W. of the Piers and there is ample water for a clear approach when coming from West and N.W., but the anchorage is limited on the South by a sandspit projecting 1 mile S.W. off Punta Cardon Cape. A beacon is located on this Sandspit in position: Lat. 11° 36′ 03.4″ N., Long. 70° 14′ 15.6″ W. Fl.R. ev. 1 sec. 17 ft. 5 miles (U).

APPROACHES: Restricted Fishing Area. Masters when approaching coast should keep a particularly sharp lookout for fishing boats, nets and small craft.

Mechanically propelled vessels drawing more than 5 ft. are prohibited from navigating in the restricted fishing area that extends off Paraguana Peninsular from Punta Macolla, Lat. 12° 05′ 32″ N., Long. 70° 12′ 55″ W. to Punta Estanques (Los Taques), Lat. 11° 48′ 45″ N., Long. 70° 16′ 45″ W., and a line connecting the position indicated below:

(a) Lat. 12° 07′ 40″ N., Long. 70° 14′ 25″ W.
(b) Lat. 12° 03′ 15″ N., Long. 70° 19′ 23″ W.
(c) Lat. 11° 49′ 25″ N., Long. 70° 21′ 50″ W.

Leading Lines

	Position			*Height in Metres*
Jetty	*Latitude* N.	*Longitude* W.	*Colour*	*(LWS)*
I	11° 37′ 19.2″	70° 13′ 54.6″	Green	4.70
	11° 37′ 23.1″	70° 13′ 47.6″	Green	14.20
II	11° 37′ 32.0″	70° 14′ 02.0″	Red	4.83
	11° 37′ 35.9″	70° 13′ 55.1″	Red	14.30
III	11° 37′ 08.1″	70° 13′ 53.5″	White	3.06
	11° 37′ 09.1″	70° 13′ 50.6″	White	14.94
IV	11° 37′ 41.9″	70° 14′ 12.0″	Blue	5.10
	11° 37′ 42.4″	70° 14′ 09.4″	Blue	21.54

Land Marks

2 radio towers, very conspicuous, with micro-wave antenna at the middle painted in aluminium white, in position, Lat. 11° 38′ 03″ N., Long. 70° 13′ 56.2″ W. Height 205 ft. (62.5 m.).

Navigation aids

A light is located on the outer radio tower.

Position: Lat. 11° 38′ 03″ N., Long. 70° 13′ 56.2″ W.

Characteristics: Fl. White and Red, ev. 10 sec. Height 205 ft. (62.5 m.) 21 miles (U).

Sectors: Red 340° – 009°, White 009° – 202°, Eclipsed 202° – 340°. (All bearings are true from seaward).

Beacon: Located on sandspit of Punta Cardon.

Position: Lat. 11° 36′ 03.4″ N., Long. 70° 14′ 15.6″ W.

Characteristics: Fl. Red. ev. 1 sec. Height 17 ft. (5.2 m.) 5 miles (U).

2 large chimneys are very conspicuous in the Refinery Area. The North chimney is situated Lat. 11° 37′ 54.6″ N., Long. 70° 13′ 10.8″ W. Height above MLWS 399.6 ft. (121.8 m). The South chimney is situated Lat. 11° 37′ 52.9″ N., Long. 70° 13′ 09.8″ W. Height above MLWS 396.3 ft. (120.8 m.). For daylight distinguishing marks, both are painted with broad red and white bands and at night both have a string of all round fixed red lights at the top and the same at the middle height.

A steel tower. A commercial radio tower is situated outside the Refinery Area in position: Lat. 11° 36′ 29″ N., Long. 70° 13′ 42″ W. Height above MLWS 164.7 ft. (50.2 m.). This is not very visible during the day, but at night it has at the top, flashing every second, an all round Red Light, visible at 12 miles.

MAX. SIZE:

	Jetty/Berth		*Depth LWS* (ft. in.)	*Draft* (ft. in.)	*Length* (ft.)	*Displac.* (tons)
No. 1	North Outer	(3)	42 00	39 06	710	25,000
	South Outer	(4)	42 06	40 00	710	25,000
	North Inner	(1)	31 06	30 00	575	25,000
	South Inner	(2)	32 06	31 00	575	25,000
No. 2	North Outer	(3)	43 00	40 06	710	25,000
	South Outer	(4)	41 06	39 00	710	25,000
	North Inner	(1)	21 00	19 06	424	25,000
	South Inner	(2)	23 00	21 06	424	25,000
No. 3	North Outer	(3)	47 00	44 06	900	62,000
	South Outer	(4)	48 00	45 06	900	62,000
No. 4	North Outer	(3)	47 06	45 00	900	54,000
	South Outer	(4)	47 06	45 00	900	54,000

TUGS: 2 tugs of 1,200 h.p. and 1,600 h.p. respectively are available, and their assistance is compulsory for berthing. Number, disposition and manoeuvres of tugboats are directed by the Pilot. The following tug signals in practice in this port are listed below for Master's guidance:

Short blasts are used to give orders to the tug situated ahead.

Long blasts are used to give orders to the tug situated aft.

1 blast means *push* tug engine, ahead (if it is stopped); *stop* tug engine, stop (if it is moving).

2 blasts, *pull* tug engine, astern.

1 long, 1 short, 1 long and 1 short whistle, "Calling tugs".

2 long and 2 short whistles, "Tugs Dismissed".

RADIO: Arrival messages (ETA). Master of vessels bound for or diverted to Cardon are requested to radio the following information to "Maraven. Caracas" via "La Guaira Radio", call sign YVG, 72 hours in advance of estimated arrival, or as soon as possible.

(a) Name of vessel
(b) Flag
(c) ETA
(d) Last Port.
(e) Master's name
(f) Number of crew and passengers
(g) Port for which the vessel is cleared
(h) Quantity of clean ballast on board
(i) All requirements

This information is of the utmost importance to the Harbour Authorities in facilitating the entry of vessels in general, and in case of diversion.

VHF Radio Telephony. The radio and communication centre is located in the Oil Movements Office Building situated at the foot of No. 2 Pier at a height of 50 ft. above sea level. The roof of the building is painted black and the word "Marine" painted across in large white letters.

There is an RT set operating 24 hours a day on the following frequencies, and manned by English speaking operators:

156.6 MHz	FM	VHF	(Channel 12)	Range limit	25 miles
156.8 MHz	FM	VHF	(Channel 16)	,, ,,	25 ,,
2120 kHz	AM	HF		,, ,,	150 ,,
2182 kHz	AM	HF	(Channel 1)	,, ,,	150 ,,
7620 kHz	(SSB)	HF	(Channel 3)	,, ,,	300 ,,

Call sign: "Marine Cardon".

Vessels not equipped with radio telephone may call the installation by signal lamp (Aldis lamp) whereupon the service launch will be sent out to vessel to pick up any message it may have.

BERTHING: Without exception ships always moor head-in on all berths. It is considered prudent to have the outboard anchor hove out prior to approaching piers to facilitate speedy release while docking if necessary. Vessels are to be moored to satisfaction of the Port Services Superintendent or his deputy; mooring lines must be tended regularly and kept hove taut to prevent surging and possible damage to ships, docks or hoses. When adjusting mooring lines, the assistance of harbour tugs should be requested before slackening off any mooring line.

BALLAST: It is suggested that vessels nominated to load at this installation arrive with the minimum of ballast on board, necessary for the safe handling of the vessel under normal conditions. In this connection experience has shown that, under normal weather conditions, vessels can be safely berthed and unberthed with a quantity of ballast of approximately 20% of their respective Summer deadweights. Clean ballast can be pumped into the sea, but Masters are reminded that pollution of the sea incurs heavy fines. Dirty ballast can be received ashore. Maximum discharge pressure to shore installation is 150 p.s.i. in the 20 in. ballast line of Jetty No. 2; Jetties Nos. 4 and 1 have a 24 in. ballast line, and Jetty No. 3 has a 16 in. line. Masters are requested to endeavour to arrive at this port with 20% SDW ballast.

MEDICAL: Facilities are available for medical and dental treatment, vaccination and hospitalisation in a private clinic.

The doctor's working hours for out-patient treatment are as follows: Monday to Friday, 0900 to 1100 hrs., 1400 to 1700 hrs. Saturdays, Sundays and holidays, only urgent cases will be attended to.

Emergency cases will be attended to at all times.

Masters requiring medical or dental service or vaccination for their crew members should call Ship's Services by dialling 2105. Our representative will make the necessary arrangements with the clinic and arrange for transportation to pick up the crew members on the pier and to take them to the clinic and back. Any crew member who is sent ashore for medical or dental treatment, and who does not speak English or Spanish, must be accompanied by a crew member who speaks one of these languages.

Doctors do not attend patients on board. In serious cases where the patient is unable to walk an ambulance will be provided to take him to the hospital.

FRESH WATER: Fresh water is available at all berths. Loading rate is 30 t.p.h.

FUEL: Available if advance notice given. Funds at to be remitted to Chase Manhattan Bank, One Chase Manhattan Plaza, New York, 24 hours in advance to Maraven S.A. (Account No. 001-1-992773).

CUSTOMS: Venezuelan National Guards are stationed at the piers to ensure that vessels in port comply with regulations.

1. *Smuggling.* Strict compliance with the Customs laws of the country is enforced by the Authorities and Masters are strongly advised to caution crew members against attempting to smuggle ashore cigarettes in carton lots, cigars, tobacco, souvenirs, gifts (particularly items of women's apparel) or other articles. A maximum of twenty cigarettes per person for personal use is allowed to be carried but a greater quantity will result in the imprisonment of the offender with possible heavy fines and delay to the vessel.

2. *Bar.* On Customs Authorities instructions vessels maintaining a "Bar Service" on board for the use of officers, crew, passengers and visitors, must keep the bar closed during the vessel's stay in port.

3. *Firearms.* Firearms on board any merchant vessel calling at Venezuelan ports must not exceed one per officer, nor can the ammunition exceed 18 cartridges per officer. All firearms and ammunition must be declared on stores list. Officers must not carry firearms while ship is in Venezuelan waters. Said arms should be collected together with the ammunition and held in the Master's safe custody. Crew members should be warned against taking knives or other weapons ashore as these will be confiscated and the bearer fined.

CONSULS: Brazil, Great Britain, Italy, Netherlands and Norway have Consular representatives in this area.

TIME: Local time is GMT minus 4 hours.

CERTIFICATES: All ships arriving in Venezuelan ports for the first time must be measured by the Maritime Authorities for issuance of a Venezuelan Tonnage Certificate, known as "Certificado de Arqueo". This document gives the measurements and weight of the vessel in accordance with existing laws. The cost of measuring and issuing of the Certificate is contingent on size and tonnage of vessel.

It is usual practice to take ashore the ship's "General Arrangement" and "Capacity" plans, which are used as a basis for calculations. These plans and the Venezuelan Tonnage Certificate are later forwarded to ship's Owners.

Vessels registered in following countries are exempt from above regulations, due to existing reciprocal agreement with Venezuela: Denmark, France, Germany (F.R.), Great Britain, Ireland, Netherlands, Norway, Portugal, Sweden, U.S.A.

The Venezuelan Tonnage Certificate is used in calculating Venezuelan Government Port charges, such as Port Captain Habilitation for entry and despatch of vessels and Pilotage Dues, for all vessels except those registered in the countries mentioned above, in which case the Lloyd's Registered Tonnage is used.

HOLIDAYS: By order of the local Port Authorities it is requested that all ships in port be fully dressed on the following national holidays: January 1st, April 19th, July 5th, July 24th, October 12th, December 25th.

REPAIRS: Shore facilities are available for emergency repairs of a minor nature. The nearest dry docks are located at Puerto Cabello and Curacao, N.A. Request for repairs should be mentioned in the ship's ETA message.

SHORE LEAVE: Shore leave is permitted and Harbour Master's representative who boards vessel on arrival issues the required number of shore passes. These passes must be shown when proceeding ashore to the Government and Company Guards at the gangway and refinery gates. They are to be collected by Master prior to sailing and handed to Pilot unberthing the vessel. Masters are reminded that in accordance with the instructions of local police, crew members be properly dressed before leaving the vessel, i.e. long trousers and shirts.

Masters are requested to have shore leave expire at least 2 hours before expected departure. Men then found missing should be reported to the Ship's Services Office, tel. 2105, who will endeavour to locate them. An officer must accompany shore personnel in order to identify the missing crew member.

Vessels are not permitted to sail until all crew members are on board, unless said crew members are hospitalised or previously signed off by the Master through the Ship's Services representative. If any crew member is missing at sailing time and cannot be found, his passport and other personal documents must be handed to the Ship's Service representative, as well as written instructions as to his repatriation, when found. All costs and expenses of a crew member so left behind will be for ship's account.

GENERAL:

1. *Animals:* The importation and transit of all birds belonging to the genus parrot or parakeet is prohibited. For other birds a valid health certificate is required. For so-called "small animals" e.g. dogs, cats, monkeys, rabbits, etc. a valid health certificate and a valid rabies vaccination certificate are required.

2. *Bonded Stores:* Stores in bond are not obtainable in Punta Cardon. The nearest port with bonded stores facilities is Curacao.

3. *Board of Trade Gangway:* A safe gangway must be provided by the vessel and should be rigged as soon as possible after mooring to allow the Port Authorities to board, and should not be taken in until Pilot has boarded to unmoor vessel. The use of rung ladders, pilot ladders, etc. is contrary to Port Regulations and Port Authorities will not board except by means of a safe gangway or accommodation ladder.

4. *Damage during Manoeuvres:* When a vessel or the pier sustains damage during manoeuvres with an official Pilot on board, it is the responsibility of the Master to submit to the Ship's Services representatives, immediately after the accident, a report in quintuplicate, for presentation to the Harbour Master. Such reports should give full details of the accident and of all engine movements as ordered by the Pilot, as well as a sketch in triplicate of the ship's manoeuvring position at the time. These will be translated by the Agents into Spanish and forwarded to the Harbour Master.

5. *Cash Advance to Masters:* Cash advances to Masters are made only in Venezuelan currency, which is the Bolivar. Cash requirements should be included in the vessel's ETA message. Foreign currencies are accepted in the United Seamen's Service Club.

6. *Rat-guards:* By order of the Port Authorities rat-guards must be fitted to all mooring lines. Non compliance entails a fine of 200 Bolivares for each unguarded line.

7. *Kerosene, Motor Gasoline, Gas-Oil, Solvents:* Supplies for ship's purposes are available in drums. The return of empty drums ashore is prohibited by Customs regulations. Therefore the cost of each drum will be billed to the vessel in the Port Disbursement Account.

8. *Lubricants, Oils and Greases:* Supplies of products are available. Vessels arriving at Punta Cardon on Saturday or Sunday or on a holiday should give ample notice of their requirements by cable in order that the necessary labour arrangements for delivery can be made. This procedure also applies to the delivery of white oils mentioned under 7 above, when required outside working days.

9. *Laundry Service:* Laundry service is available throughout each working day. Such service should be requested in the vessel's ETA message.

10. *Wireless Transmitters in Port:* It is strictly prohibited to use vessel's wireless transmitters in the Port of Cardon. Non-compliance with this regulation may result in a fine being imposed on the vessel by the authorities.

11. *Mail:* On vessels' arrival, blank Mail List Forms will be handed to the Master to be completed in sextuplicate and duly signed by him, when sending ship's and crew mail ashore for posting. Ship's mail received after ship has sailed, or for vessels on which no advice has been received, will be held for 15 days and then returned by airmail to the owners or operators or senders, at ship's expense unless specific instructions have been received beforehand.

12. *Marine Surveyors:* Both the Lloyd's Agents at Maracaibo and Norske Veritas at Caracas have a representative in Punta Cardon who acts on their behalf when a surveyor is requested. However, in the case of continuous or classification surveys, advance notice of 4 days should be given in order to arrange for an appointed surveyor to come from Caracas. There is also a representative of the American Bureau of Shipping in this area (Caracas).

13. *Miramar Club:* Masters, chief engineers and their wives can visit the Miramar Club. For this purpose entrance passes should be requested from the Ship's Services Office, tel. 2105.

14. *Manaure Bathing Beach:* The above mentioned bathing beach is open to all ship's staff and crew members.

15. *Norwegian Government Seamen Service:* A Norwegian Vice Consul and Welfare Officer is stationed at Punta Cardon, and provides the usual services to seamen of this nationality. His telephone number is 4359.

16. *Navigation Charts:* Navigation charts are not available at this port.

17. *Passengers:* Movement of passengers over Cardon Piers is subject to restriction under terms of agreement with the government. Passengers will not be permitted to disembark unless in possession of the required Venezuelan visa and travel documents. If passengers are carried, Master should so advise in his radio ETA so that arrangements can be made for Immigration Authorities to visit vessel on arrival and thus facilitate clearance.

18. *Petroleum Inspection:* Charles Martin & Co., and E. W. Saybolt, petroleum inspectors, are available in this area. Contact can be made through the Loading Supervisor (tel. 2821).

19. *Personnel – Seamen Left Ashore:* In the case of seamen left ashore for hospitalisation, repatriation, desertion or other reasons, all documents and personal effects are to be handed to the Oil Movement Department's representative before sailing. A letter is required from the Master advising the maximum advances, if any, to be made to the seamen, and instructions concerning his repatriation. All expenses incurred by seamen left ashore, including cost of repatriation, are for ship's account. It is important that Masters bear in mind that the Venezuelan law will at all times hold the vessel, her Master, or Owner responsible for any seamen left behind in Venezuela.

20. *Photographing:* The taking of photographs within the boundary fence of the Cardon Refinery is prohibited. Taking cameras ashore is likewise prohibited.

21. *Provision and Stores:* Provisions and stores are available. Requisitions should be conducted through the Ship's Services Office. Telephone number 2105 or the Ship's Services representative when he calls on board with the authorities on arrival. Ships' chandlers are not permitted to visit ships, unless specifically instructed to do so by the Agents.

22. *Radar and Radio Repairs:* Repair and maintenance services for radar, radio, gyro compass, radio direction finder, echo sounder, etc. are available. The repair man should be contacted through the Ship's Services Office, telephone number 2105.

23. *Safety of Personnel:* It will be appreciated that persons intoxicated by alcoholic drinks can create risks of accidents; therefore we ask the Master's co-operation to ensure that these persons do not enter the refinery gates and/or board their vessel unless accompanied by sober members of their crew. In this connection we will advise the Master or one of his officers, so that measures can be taken to ensure the safety of the forementioned person(s) e.g. by sending one or more of the crew to the gate to accompany him (or them) to the ship.

24. *Visitors:* Visits to ships are prohibited except from those company employees, petroleum inspectors, etc., whose duties require their presence on board.

25. *Walport Film Exchange:* Subscribers to the Walport service may exchange films at the U.S. Seamen's Club situated at the foot of No. 2 Pier, from 0730 to 2200 hrs. every day, by telephoning 2803.

26. *Staff and Crew Changes:* No staff and/or crew should be engaged or discharged without consulting Ship's Services (telephone 2105). In case of discharge, identification documents must be handed to the Ship's Services representative or the Norwegian Consular Officer in the case of Norwegian vessels.

27. *Tank Cleaning and Mopping:* Several contractors in the area provide labour for tank cleaning and mopping. Masters in need of this service should submit their requirements to the Ship's Services Office (telephone 2105), who will contact and request a contractor to go on board to discuss details and estimate costs of work to be effected. It must be pointed out that the Master of the vessel is solely responsible for the proper fitness of the ship's tanks for loading his next cargo, and will therefore be held liable for any contamination of the cargo after loading, due to inadequate tank cleaning. Therefore it is up to him to decide the degree of tank cleaning necessary. He may, of course, seek advice from the installation representative in this respect, whenever there is any doubt.

28. *Turnaround:* To promote the economical operation of their vessel, Masters are requested to co-operate with installation representatives in minimising their in-port time. Any delays which are considered unnecessary or extensive should be reported to the loading Supervisor (tel. 2133) so that corrective measures can be taken.

29. *U.S.S. Club:* All seamen are welcome to the club operated by United Seamen's Service which is located at the shore end of Pier No. 2. Shore passes are required to reach this Club. Beer, soft drinks, ice-cream, candies and various souvenirs and presents can be purchased at reasonable prices. Free cinema shows are usually held twice weekly. A letter-posting service is available as well as recreational facilities, e.g. billiards, table tennis, darts, etc. A barber shop operates during daytime.

TELEPHONES:

Communications Office (General and Port Information, 24 hours service), 2604. Ship's Service Office (All services to ships: mail, doctor, taxi, papers, etc., 24 hours service), 2105. Agents' Office (Weekdays) (0700 to 1200 – 1300 to 1600 hrs.), 2125. Loading Supervisor (Re cargo and bunkers), day, 0700 to 1600 hrs., 2821/2133; at night, after 1600 hrs., 2133. U.S.S. Seamen's Club, 2803.

AUTHORITY: Maraven, S.A.

NOTES

Please also advise Shipping Guides Ltd.

Socialist Republic of Vietnam

GENERAL:

The following ports are open for international trade:

1. Campha
2. Hon Gay
3. Haiphong
4. Ben Thuy
5. Danang
6. Quy Nhon
7. Nha Trang
8. Saigon
9. Vungtau

DOCUMENTS: (All ports).

Arrival Procedure:

(a) Arrival documents to be filled in or signed:

Clearance from Last Port.
2 copies Declaration of Arrival.
2 copies Crew Lists.
8 copies Passenger Lists.
2 copies Health Declaration.
Crew Personal Effects (individual declaration).
Passengers Personal Effects (individual declaration).
5 copies Dangerous Cargo Declaration.
5 copies Cargo Manifest.
5 copies Cargo Plan.
8 copies List of Articles Forbidden to be Used in Port.
Zoological Quarantine Declaration.
Phyto Quarantine Declaration.
Ship's Stores Manifest.
Phyto Sanitary and Fumigation Certificates.
Veterinary Certificate.
Phyto Quarantine Certificate.
Application for Crew Members and Passengers Shore Passes (to be returned before Ship's Departure).

(b) Arrival documents to be submitted to Port Authority:

Ship Nationality Certificate and Navigation Certificates.
International Load Line Certificate.
International Tonnage Certificate.
Safety Radio Telephony Certificate.
Safety Equipment Certificate.
International Certificate of Vaccination for Passengers and Crew.
Ship's Derat (or Exemption) Certificate.
Seamans Passports or Seaman Books of Crew and Passports of Passengers.
Transit Cargo Manifest.
Zoological and Botanical Transit Cargo Manifest.
Certificates of Competency of Officers and Engineers.
Certificates of Proficiency in Manoeuvring Lifeboats.
Foreign Currency Declaration and Invoices.

Departure Procedure:

1 copy Health Declaration.
6 copies Outward Cargo Manifest.
6 copies Crew Lists and Passenger Lists (if changes).
6 copies Personal Effects Declaration.

RADIO: *Notice of Arrival:* ETA message to be given 48 hours prior to ship's arrival including particulars of vessel and cargo on board. 4 hours prior to arrival send correct time of arrival.

PILOTAGE: Compulsory.

Haiphong, Campha and Hon Gay Port Pilot Station at "Zero Buoy" (position Lat. 20° 42′ 01″ N., Long. 106° 57′ 08″ E.).

Vungtau and Saigon Port Pilot Station at "Zero Buoy" (position Lat. 10° 20′ 40″ N., Long. 107° 03′ E.).

HEALTH: *Sanitary and Quarantine:* Quarantine Documents: see "Documents".

Pratique is Free at the second port in Vietnam.

MEDICAL: Assistance available.

RESCUE AND SALVAGE: Rescue and salvage company available with head office in Haiphong and branches in other ports.

REPORT: In June, 1985 the Ministry of Transport and Communications and Ministry of Interior issued a joint Circular concerning foreign vessels trading to Vietnam.

Some of the major points in the Circular are:

Commercial vessels may call at all ports officially declared open if permission from Transport and Communication Minister obtained at least 7 days in advance of arrival. The arrival should be re-confirmed at least 24 hours before entering territorial waters.

Emergency calls are allowed but the Maritime Administration should be notified immediately.

Vessels only allowed to leave the pilot staion when all formalities such as Free Pratique, Customs Clearance, etc., have been performed.

Crew members and Officers are not allowed to have contact with other than Officials and Pilot during arrival and sailing formalities.

AUTHORITY: Ministry of Communication and Transport, Maritime Legislation Department, 11 Vo Thi Sau Street, Haiphong, Vietnam. *Tel:* 393. *Contact:* Nguyen Cong Duc, Director.

BEN THUY: 18.39 N. 105.42 E.

PORT LIMITS: The seaward boundaries of Ben Thuy port are the Lat. 18° 50′ N. in the North, the Lat. 18° 45′ N. in the South and the Long. 105° 49′ E. in the East.

DOCUMENTS: See "General" before first port.

PILOTAGE: Pilot boat arrives at "Zero Buoy" (Lat. 18° 47′ N., Long. 105° 47′ E.) at correct arrival time.

ANCHORAGE: Anchorage Area: "Zero Buoy" and Hon Ngu Island within port limits.

RESTRICTIONS: Maximum draft to enter 4.5 m. (15 ft.). Vessels exceeding 4.5 m. draft discharge cargo into self propelled barges at position: Lat. 18° 49′ N., Long. 105° 45′ E. (N.W. of Hon Ngu Island). Pilot boat may only arrive at "Zero Buoy" in conditions of weather with wind not exceeding Force 5. Pilot boards during daytime only.

MAX. SIZE: At berth LOA 100 m. Max. draft 4.5 m.

HEALTH: See "General" before first port.

RADIO: There is no radio contact with Ben Thuy port. Notice of Arrival messages sent via Haiphong Radio XVG or Danang Radio XVT.

VHF: Ben Thuy Harbour Master on Channel 16 from 0800 – 1400 hrs. and 1600 – 2000 hrs. local time.

TUGS: 2 tugs, 305 h.p. each available.

BERTHING: One pier of 200 m. length and 3 shorter berths.

CRANES: There are 7 mobile truck cranes, capacity 6 tons each.

BRIDGES: None.

STEVEDORES: Stevedores work 2 shifts. 0600 – 1800 hrs. and 1800 – 0600 hrs. with one meal interval between 1130 – 1230 hrs.

One gang average for day (24 hours).
Grain and Bulk Cargo: 300 tons.
General Cargo: 150 – 200 tons.

DENSITY: 1,000 at low tide.

FRESH WATER/FUEL: Not guaranteed.

SURVEYORS: Cargo Surveyors: Nina Control attend from Hanoi.
Ship Surveyors: Vires, Branch No. 3, Vinh City.

PORT REGULATIONS: To Harbour Master's advice.

SHIPMASTER'S REPORT: July 1982.

Location: 10 miles upstream from the entrance of the Song Ca river. Vessels exceeding 4.5 m. draft discharge cargo at anchor off the entrance to the river into self propelled barges which transport the cargo to Ben Thuy.

Pilot/Anchorage: Vessels anchor in position: Lat. 18° 47′ N., Long. 105° 47′ E. 1.5 miles S.E. of Hon Niem Island in 14 m., soft grey mud and sand. Pilot and officials board at this position. After clearance granted vessel shifts to discharge anchorage in position Lat. 18° 49′ N., Long. 105° 45′ E. 1 mile N.W. of Hon Niem Island in 10 m. This anchorage was approached by rounding Hon Niem Island to the Eastward, not less than 0.5 miles off, there is a dangerous rock awash at LW in position Lat. 18° 50.7′ N., Long. 105° 46′ E. It is prudent to approach the port in daylight due to the large amount of unlit fishing craft in the vicinity.

Documents/Officials

Officials boarding with Pilot on arrival:

3 Security Officers.
2 Customs Officers.
2 Immigration Officers.
2 Quarantine Inspectors.
1 Agricultural Inspector.
1 Agent.
1 Harbour Master.

To be accommodated and victualled during stay of vessel in port:

3 Security Officers.
2 Customs Officers.
1 Agent.

Agent is the only person who speaks/understands a limited amount of English.

Documents required:

6 Crew Lists.
2 Store Lists (deck, engine and cabin).
1 Health Declaration.
2 Stores Lists (provisions).
2 Crew Customs Declaration Lists.
2 Currency Lists (foreign monies in crew's possession).
2 Bonded Stores Lists.
4 copies Cargo Manifests.
4 copies of Bills of Lading.
2 Cargo Stowage Plans.
3 Forms (supplied) for Sextants, Binoculars, Cameras, etc.
3 Forms (supplied) for Arrival details and times.
1 Form (supplied) Report concerning where water taken during the voyage, drinking and ballast in tons and tank being used at present for drinking water.

Certificates of Registry, Radio, Load Line, Safety Equipment and Derat sighted also Clearance from last port.

All Passports/Seamen's Identity cards collected and taken ashore, require to see each crew member and compare with passport photo. Discharge Books were not required. All Vaccination Certificates sighted and returned. Inspection of all crew cabins and each crew member's foreign money counted at the same time.

Restrictions: Main switch for Radio Transmitter/Receiver sealed.

All Cameras sealed. Bond and beer lockers sealed. (Release of bonded stores available at any time from Customs Officers on board).

General: There is no Radio or VHF contact with Ben Thuy. ETA/Health messages, etc, via Haiphong Radio XVG to VOSA Haiphong.

No fresh water or oil fuels are available at the anchorages off Ben Thuy.

Limited quantities of fruit and vegetables are available when in season.

There are no facilities for sending or receiving mail.

Draft survey is carried out at commencement and completion of cargo, 3 surveyors attend from Hanoi, a journey of approximately 10 hours by road.

Bulk cargoes are discharged by ship's gear using shore grabs (which are in poor condition) each grab capacity approximately 1.5 tons (bulk wheat) also burlap savealls, sewn on to cargo nets are used.

Cargo loaded into self propelled barges, each carrying 40/50 tons bulk grain, approximately 20 barges are available when none are under repair, which is quite frequent, journey to discharge wharf takes 3 hours, 6 hours to discharge and 3 hours to return to the ship.

Stevedores work two shifts 0600 – 1800 hrs. and 1800 – 0600 hrs. with one meal interval between 1130 – 1230 hrs.

1 gang's average discharge per day (24 hours) 250/350 tons.

AUTHORITY: Ben Thuy Port Director and Harbour Master.

DANANG: (Tourane): 16.04 N. 108.13 E. (See Plan)

DOCUMENTS: See "General" before first port.
PILOTAGE: Pilot station at position: Lat. 16° 10′ N., Long. 108° 11′ E. Pilot boards from a tug boat during daytime only. Ships arriving at night should anchor in a position close to the pilot station.
ANCHORAGE: In the Bay of Tourane, depths up to 19 m.
RESTRICTIONS: No restrictions in the Bay and anchorage.
MAX. SIZE: See "Berthing".
HEALTH: See "General" before first port.
RADIO/VHF: Danang Radio, call sign XVT. Pilot and Harbour Master on VHF Channel 16.
TUGS: 3 Tugs available. 1×1,200 h.p. and 2×800 h.p.
BERTHING: There is one finger pier of 250 m. at Cang Sau (deep port) location Lat. 16° 07′ 01″ N., Long. 108° 12′ 6″ E.
MAX. SIZE: Permissible LOA 190 m. Beam 26 m. and Max. draft 11 m.
CRANES: There are no cranes available. There is one heavy lift floating crane of 100 tons capacity.
STEVEDORES: Ordered by Agent work continuous throughout 24 hours except for meal breaks.
MEDICAL: 6 hours' notice required for medical assistance. There is a hospital in town.
TANKERS: Two submarine hoses of 8 in., all kinds of white spirits discharged through both lines. Maximum back pressure 8 kgs. Average discharging rate 200 tons per hour per line.
FRESH WATER: Available by barges, rate of delivery 50 t.p.h.
FUEL: Fuel oil, diesel oil and lubricating oil available.
REPAIRS: Minor repair facilities. There are no dry docks at this port.
AIRPORT: There is an airport about 7 km. from the town. Air services to Ho Chi Min City, Hanoi and Haiphong City, local flights only.
TIME: GMT plus 7 hours.
HOLIDAYS: There are no special holidays.
POLICE/AMBULANCE/FIRE: Via local Agent.
SERVICES: Shipchandler available at all times.
SHORE LEAVE: Permitted via local Agent.
SURVEYORS: Cargo Surveyors: Vina Control.

Ship Surveyors: Vires, Branch No. 4, 114 Bach Dang Street, Danang City.

SHIPMASTER'S REPORT: 1976.
Documents: On arrival usually dealt with immediately by the Immigration Service, Police Service, Customs Service, Agency and Health Service.
Ship's Documents: Certificate of Registry, Radio Certificate, Load Line Certificate, Safety Equipment Certificate, Port Clearance from last port.
Cargo Documents: Bill of Lading (8 copies), Cargo Manifest (8 copies), Stowage Plan (5 copies), In Transit Cargo Manifest (if any).
Immigration: Crew List (7 copies), Store List (2 copies), Crew's Effect Declaration (2 copies), Passports of the Crew.
Health: Vaccination List (2 copies), Provision List (2 copies), International Vaccination Certificates.

All documents to be ready on arrival. Cameras and binoculars to be collected and placed in a locker, to be sealed. Bonded stores not sealed.
Pilotage: Pilot station at a position Lat. 16° 10′ N., Long. 108° 11′ E. Pilot boards from a tugboat and moves the ship to a position about 1 mile West of Phare de l'observatoire. Pilot boarding during daytime only. Ships arriving at night should anchor in a position close to the pilot station. Pilot will board the ship at 0600 hrs. in the morning. ETA should be given 48 hours and 24 hours prior to arrival at the pilot station.
Restrictions: There are no restrictions for entering the bay.
Health: A 24 hours cable should be sent to the Agent, stating that all crew are fit and healthy. If any sickness on board cable 48 hours in advance.
Radio:

Callsign	Frequency	Working hours GMT
XVT	500 kHz	0001 – 1200 hrs.
XVT 2	417.5 kHz	0001 – 1200 hrs.
XVT 2	8,570 kHz	0130 – 0145 hrs.
		0830 – 0845 hrs.
		1200 – 1315 hrs.

VHF: There is no VHF station.
Radar: There is no radar post.
Tugs: There are 3 tugboats available, 1×1,200 h.p., 2×800 h.p. each. Tug's lines are used if necessary.
Berthing: There is one finger pier of 250 m. and another under construction. The latter to be ready towards the end of 1976. A tanker berth is situated in position Lat. 16° 04′ N., Long. 108° 15′ E. called My Khe. Tankers proceed to this position, after clearance, with Pilot rounding by the peninsula. (See "Plan"). At the cargo pier all discharging is done by ship's gear.
Cranes: There are no cranes available. There is 1 heavy lift floating crane of 100 tons capacity.
Bulk Handling Facilities: Bulk cargoes are sometimes handled at the port (i.e. maize) but there are no special facilities.
Bridges: No bridges.
Stevedores: Ordered by the Agent. No ETA necessary. Working hours 0001 – 0400 hrs., 0800 – 2400 hrs. Approx. discharging rate general cargo 400 tons/gang.
Medical: Six hours' notice required for medical assistance. There is a hospital in town. Inoculations required for cholera and yellow fever.
Tankers: Two submarine hoses of 8 in., all kinds of white spirits discharged through both lines. Maximum back pressure 8 kg. at ship's manifold. Average discharging rate 200 t.p.h. per line.
Density: Cargo pier brackish depending on the season. At the tanker berth salt.
Fresh Water: Available by barge, rate of delivery 50 t.p.h.
Repairs: Repairs taking longer than 2 hours are not permitted unless permission is granted by the Port Master. Small repair facilities can be carried out ashore. There are no drydocks at this port.
Deck Watchmen: Cargo ships alongside the pier are provided with a gangway watch. Tankers discharging at My Khe will have two security guards on board during the stay in port.
Hatches: Old type hatches opened and closed by shore labour. Special patent hatches by crew.
Customs Allowances: The bonded stores are not sealed. There are no restrictions for quantity of spirits, cigarettes, beer, etc. It is strictly prohibited to supply any bonded stores to shore personnel.
Cargo Gear: There is 1 floating heavy lift crane of 100 tons.
Repatriation: Possible, but takes some time and can be very difficult. Haiphong is a better place for crew changes.
Airport: There is an airport about 7 km. from the town. Air services to Ho Chi Min City and Haiphong, local flights only, twice a week.
Time: GMT plus 7 hours (no Summertime) is kept along the whole coast.
Holidays: There are no special holidays.
Police/Ambulance/Fire: Via local Agent, telephone number 21161.
Services: There are laundry facilities (2 days ashore) with a 24 hour service. Shipchandler available at all times. Good fresh vegetables and fruits, depending on the season. Also good sea food.
Shore Leave: Permitted via local Agent with 6 hours' notice. Persons with invalid passport are not allowed to go ashore.
Regulations: It is strictly prohibited to throw any garbage into the bay, heavy fines. Garbage collected by barge.
Delays: Remittance has to be granted by Owners or Charterers before sailing. Without a sufficient remittance the vessel does not receive a clearance.

Alongside the pier berthing and unberthing only between sunrise and 1400 hrs. due to strong winds in the afternoon. At any other time when strong winds are experienced berthing and unberthing not allowed. The fore mentioned also for the tanker berth at My Khe, here berthing is normally carried out during the morning hours, when there are weak winds. During a strong monsoon it is sometimes necessary to stop discharging operations and unberth the ship.
General: Ships calling for the first time at Danang port should give their ETA and call sign, nationality, all other necessary particulars so that the ship can be identified by the Navy. Ships, chartered by the Vietnamese Government should state this also and whether time or voyage charter. Ships carrying general cargo should also give all particulars about the stowage of the cargo, whether any deck cargo, heavy lifts etc.
Agent: Vietnam Ocean Shipping Agency, 1a Quang Trung, Danang. Cable: OSA Danang, telephone 21161.

SHIPMASTERS' REPORT: September 1980.
Documents: See "General".
Pilotage: Compulsory. Pilot boards in position Lat. 16° 10′ N., Long. 108° 11′ E. Notice required 24 hours. Daylight only for berthing except in cases of emergency.
Anchorage: In the Bay of Tourane; depth up to 19.0 m.
Restrictions: No restrictions in the bay and anchorage, depth of water up to 19.0 m.
Radio: Danang Radio.
VHF: Pilot on Channel 16.
Tugs: Two tugs available; 1 of 1,200 h.p., the other being used for barge work only.
Berthing: Location Lat. 16° 07.1′ N., Long. 108° 12.6′ E. Two piers available. Distance from sea to berth 4 miles. Max. size permissible: LOA 190 m., beam 26 m. and deepest draft 11 m. Least depth of water in channel from sea to berth 13.0 m. Mean tidal range at berth 0.5 m. Nature of bottom at berth – mud and sand. Average density 1016.

Cargo Handling Facilities: No bulk handling facilities or quay cranes available. There is a quarter ramp for Ro/Ro vessels and a 50 ton floating crane. Security is good as armed police are on duty throughout the vessel's stay. There is adequate storage space for break bulk and palletised cargoes. No container handling facilities. Stevedore gangs are available as required and work throughout 24 hours except for meal breaks.
Barges: There are steel barges of various sizes which are towed by tugs.
Services: The following are available: Fresh water; fresh provisions; minor repairs facilities; airport with internal flights only; laundry services; bunker fuel oil; diesel oil; lubricating oil; doctor and hospital; groceries and meats.
General:
Officials Boarding on Arrival with Pilots:
  Two armed police who remain aboard during vessel's stay at anchor.
Officials Boarding when Vessel Anchored:
  Agent and assistant.
  1 Customs Officer.
  1 Immigration Officer.
  1 Agriculture Inspector.
  2 Quarantine Inspectors.
  2 Security Officers.
Documentation:
  8 Crew Lists.
  2 Stores Lists – Deck, Engine and Provisions.
  2 Crew Customs Declaration Lists.
  2 Currency Lists for foreign money in Crew's possession.
  2 Bonded Stores Lists.
  1 Health Declaration.
  2 Crew Vaccination Lists.
  All Vaccination Certificates.
  4 Copies of Bills of Lading.
  7 Copies of Cargo Manifest.
  2 Copies of Cargo Manifest – Cargo in Transit.
  1 Form (Supplied) for Ship's Sextants, Binoculars, Cameras, etc.
  1 Form (Supplied) for Arrival Details and Times.
  All discharge books (passports of Officers' wives collected for safe keeping ashore).
Restrictions:
  Main and Emergency Transmitters sealed.
  Stornos (Walkie Talkies) sealed.
  Cameras sealed.
  Bond sealed.
  Inspection of all cabins on arrival.

General:

Vessel on 4 hours' notice at all times for sailing or shifting berth. Although bond sealed release of spirits available at any time from Customs.

Very strict on cigarettes with issue of only 200 per week per person. Shore passes issued to all personnel. Shore leave very restricted but bus service available to Seaman's Club nightly from 1800 – 2130 hrs. accompanied by a guard.

Maximum of 20 cigarettes per person for shore leave.

Seaman's Club takes sterling (£5 notes and above only) and U.S. dollars.

One sight seeing tour was to have been arranged this call but cancelled due to adverse weather conditions. (Limited number of cameras would have been available on this occasion).

Remittances from Owners take at least 1 month before any cash is made available.

One typoon warning received this call when vessel had to vacate berth and proceed to anchorage.

One emergency vacation of berth at 0300 hrs. this call when heavy swell built up alongside pier.

On departure full inspection of cabins and personnel, discharge books (passports of Officers' wives returned). Shore passes collected. No mail received this call due 1 month delivery time. No restriction on bond for coastal passage Danang to Haiphong.

AUTHORITY: Danang Port Director and Harbour Master.

AGENT: Vosa, 1a Qang Trung Street, Danang City.

HAIPHONG: 20.52 N. 106.41 E.

PORT LIMITS: Seaward boundaries of Haiphong port limits within 3 miles of "Zero Buoy" (Lat. 20° 42′ 01″ N., Long. 106° 57′ 08″ E.) toward sea.

DOCUMENTS: See "General" before first port.

PILOTAGE: Pilot boat arrives at "Zero Buoy" at correct arrival time (CTA). Pilot station on VHF Channel 16.

ANCHORAGE: To Pilot's advice.

Ninhtiep Bachdang anchorage areas with max. draft 25 ft. Ha Long Bay with max. depth 10.00 m. (low tide).

RESTRICTIONS: Max. draft to enter 25 ft. on lower tide time. Ships have to operate lighterage at anchorage areas.

MAX. SIZE: At berths LOA 200 m. Breadth 26 m. Draft 25 ft.

HEALTH: See "General" before first port.

RADIO: Haiphong Radio handles vessel traffic. Call sign XVG frequency 500 kHz and 8364 kHz.

TUGS: Tugs available of 500 h.p. and 600 h.p. A larger tug of 3,200 h.p. is used for rescue, salvage and towage.

BERTHING: Port central area has 12 berths available.

Berth Nos. 1 and 2: Ore and coal cargo.

Berth Nos. 9 and 10: Grain cargo.

Berth No. 11: Refrigerated cargo and general cargo.

Doanxa Area: 2 berths for Ro/Ro and container ships.

ChuaVe Area: 2 berths for passenger ships and cargo ships.

SoDau Area: 1 pier and mooring buoy for tankers.

VatCach Area: 1 quay for barges.

CRANES: Port Central Area and Doanxa Area have shore cranes with capacities of 5 tons, 6 tons, 7 tons, 10 tons, 16 tons, 25 tons and max. 30 tons.

Floating cranes 60 tons to max. 200 tons available.

BRIDGES: None.

STEVEDORES: Ordered by Agent, 4 gangs/24 hours continuously. Loading and discharging rates stipulated by charter party.

Particular advice: see "General" – "Notice of Arrival".

DENSITY: Low tide 1000.

FRESH WATER: Supplied by ship chandler from barges.

FUEL: Not guaranteed.

FIRE PRECAUTIONS: Safety Regulations for tankers and other ships with dangerous cargo.

REPAIRS/DRY DOCKS: Pha Rung ship repair yard. Dry dock available for ship's with max. length 150 m.

SURVEYORS: Cargo surveyors: Vinacontrol. Ship surveyors: Vietnam Register of Shipping (VIRES).

CUSTOMS ALLOWANCES: No restrictions for spirits, cigarettes and beer for crews use, but strictly prohibited for commercial purposes.

REPATRIATION: To Agent's advice.

AIRPORT: Haiphong Airport available only for domestic flights to Danang and Ho Chi Min City International airport.

Noibai situated 130 km. from Haiphong.

TIME: GMT plus 7 hours.

POLICE/AMBULANCE/FIRE: Available.

SERVICES: To Agent's advice.

SHIP SUPPLY SERVICE: If necessary, to Agent's advice.

SHORE LEAVE: No restrictions (see documents).

SHIPMASTER'S REPORT: 1976.

Documents:

8 Crew Lists.

2 Ship's Stores Manifests.

2 Crew Personal Effects Declaration (especially: cameras, binoculars, and Foreign Currency).

2 Vaccination Lists: cholera. All International Vaccination Certificates. All Passports (are taken into custody by Security Officials).

Special Documents: Special forms which are handed to vessel on arrival.

Health Dept:

1 Declaration of Health on arrival.

1 List of Provision Store (incl. vegetables, fruits, fish, shellfish, meats etc. and where taken).

1 Report of water taken on board: (Drinking — or Ballast water, tons, ports where taken) — tank now being used to supply drinking water.

State Security Dept.:

4 Copies List of Articles forbidden to be used in port: ie. radio transmitter/receiver — Numbers and power; radar; VHF; radio direction finder; echo sounder; sextant, signal gun, signal rockets, flare signals, arms, ammunitions, cameras, binoculars, tape recorders, band recorders.

Note: The radio transmitter, VHF, radar, binoculars, cameras are sealed.

2 Copies Declaration of Arrival.

Note: Cameras, binoculars of the crew have to be collected and placed in a locker which is sealed. Bond is *not* sealed, and consumption is free.

Pilot: Boards at "Zero Buoy".

Note: There is no VHF radio contact possible and there is no signal station available, ETA should be given as exact as possible.

Restrictions: Max. draft to enter: 25 ft. (HW).

If ship's draft is more than 25 ft. ship has to lighten into lighters. This is done in Baie d'Halong. The procedure is that after embarking the Pilot at "Zero Buoy", the ship is brought to this bay (in daylight hours only) via: Bai de Lan Ha – Entree Profonde – Rade du Crapaud – Chenal du Volta – Chenal de la Cathedrale.

In our case we anchored in Chenal de la Cathedrale; Lat. 20° 52′ N. Long. 107° 03′ 06″ E. and discharged our gas oil cargo into tanker barges varying in size from 125 – 400 long tons. Some coastal tankers (1,500 – 2,000 long tons) are also available for accepting the cargo.

When discharging into lighters ship should provide suitable hoses.

General:

1. Ship was cleared by Authorities at this anchorage. In view of the distance to Haiphong – 5 hours by motorboat – this clearance is only given in daylight hours. Often the ship's Agent stays on board during cargo operations.

2. Because the radio transmitter is sealed, no direct contact with the outside world is possible. All messages for the Agents at Haiphong should be given to the lighters going there.

3. Medical assistance: A doctor and Hospital is available in Hon Gay – on the other side of the Baie d'Halong. The doctor inspects the patient on board before permission to go ashore is given.

4. Outward clearance: Same procedure as inward clearance. Authorities come by motorboat from Haiphong (boat leaves there at about 0600 hrs. and arrives in Halong Bay at about 1100 hrs.). Passports are handed back to crew.

5. On inward as well as on outward clearing, crew has to stay in their cabins for inspection by Customs and security officials.

SHIPMASTER'S REPORT: April 1979.

Pilotage: Boarding position: Lat. 20° 41′ N., Long. 106° 58′ E.

The pilot boat is a 25 m. long steel vessel with white hull and superstructure. A Vietnamese flag is printed on the white funnel.

The Pilot boarded without notice, also the Agent (VOSA) did not reply to any cables requesting information. Pilotage carried out during night time only in the Winter.

Two soldiers board with the Pilot and if vessel is to anchor for lightering the Pilot and soldiers remain onboard.

Buoys: The marking of the channel by buoys is good, but for day time only. At night the lights are poor and vessels have to keep a good lookout for them.

Customs: Bond is sealed when the vessel is alongside. Very strict allowance for cigarettes.

SHIPMASTER'S REPORT: October 1980.

Documents: See "Shipmaster's Report" for Danang dated September, 1980.

Pilotage: Compulsory. Pilot boards in position Lat. 20° 41′ N., Long. 106° 58′ E. 24 hours' notice required.

Anchorage: The inner anchorage is between the outer bar and the channel cut, depth at LW 8 m.

Restrictions: It is not advisable to enter or leave during hours of darkness as there are only a limited number of lights and buoys.

Max. Size: Max. LOA 200 m., beam 26 m., draft 7.5 m. Lightening facilities are available at Baie D'Halong for vessels with draft of up to 10 m.

Health: Quarantine Authority require 24 hours' notice of arrival.

Radio: Haiphong Radio handles vessel's traffic.

Tugs: Available. 1×600 h.p., 1×500 h.p.

VHF: The Agency (Vietnam Ocean Shipping Agency – VOSA) on Channels 6 and 16. They will forward messages to the Pilot.

Berthing: Berth situated in position Lat. 20° 52′ N., Long. 106° 43′ E. The berth was built in 1976 and is down river from the town berths. In all there are 12 berths available. Our berth was 18 miles from the entrance. Max. size acceptable at the berth, LOA 200 m., beam 26 m. and deepest draft 7.4 m.

Cargo Facilities: No bulk handling facilities; no cranes at this berth but some were sighted at the town berths; no Ro-Ro facilities visible. There is a floating crane with a capacity of 60 tons (approx.). Security is good as armed guards stay aboard the vessel throughout. No container facilities of any kind sighted. Labour works around the clock in 3 shifts.

Barges: Wood and steel barges available, some have engines.
Consuls: None, nearest are in Hanoi.
Services: The following are available: Fresh water; fresh provisions (depending on time of year); minor repair facilities; airport; laundry service; diesel oil; lubricating oil; doctor and hospital; small amounts of groceries and meats.
General: Any vessel intending to remain at the port for a long period of time should have onboard sufficient stores and fresh water prior to arrival, as if vessel at anchor, stores and fresh water can take up to one week to arrive.

SHIPMASTER'S REPORT: November 1981.
Pilot Station: The Pilot boards the vessel at the anchorage which is about 2 to 3 miles S.S.E. from Zero Buoy. Pilot boat is a metal boat about 20 m. length. The funnel is painted buff with a red stripe and a yellow star.
Restrictions: There are 2 mud banks up river. One after the buoyed channel and one after the ship-canal about 1.5 miles before the berths. River draft depends on the tide which varies from 6.4 m. to 7.2 m. at HW. Haiphong port draft about 6.9 m.
Pilotage: The channel from Zero Buoy to Haiphong has buoys but no lights visible and the buoys are often out of position. The channel is very narrow having few cm. bottom clearance. Pilots are good.
Anchorage: For deeper draft than 6.9 m., ships are lightened at Halong Anchorage. Pilots, Security Officers and Customs Officer board at Zero Buoy and the vessel proceeds to the anchorage via Passe Henriette. Depths are 18 m. to 21 m. and good holding ground. The place is sheltered from all winds except North.
Documents: 1 more copy of Crew List and Money Declaration necessary than stated in "Shipmaster's Report", September 1980 for Danang.
Also see "General".
Security Police: At Halong Anchorage 2 security policemen remain on board, requesting accommodation and food.
Agency: During the vessel's lightening, Agent's clerk remains continuously on board requesting accommodation and food. Any communication with the Agency at Haiphong is done by telegram. Ship's transmitter is unsealed by Security Officer, message sent, and then resealed. Whilst alongside, Agent visits every day and they are quite efficient.
Stevedores: At Halong Anchorage, a barge with quarters for the stevedores comes alongside the vessel. Chief Stevedore is always available speaking efficient English. Discharging performed by vessel's derricks with shore grabs. Rate about 1,500 metric tons per day. At Haiphong berth discharging performed by shore cranes with a rate of about 1,800 – 2,000 metric tons per day. Haiphong port has a berth accommodating ten large ships. There are about 25 shore cranes from 10 to 15 tons capacity and we have seen 1 floating crane of about 200 tons.
Ship Chandler: Fresh provisions are poor quality and only small quantities available. Low prices. Also ship chandler takes care of sick crew members for hospital and doctors.
Shore Leave: From Halong Anchorage crew are not allowed to go ashore. At Haiphong berth shore leave allowed from 0700 – 2300 hrs. All foreign currency, rings, watches, must be declared at the gate.
Repatriation: Agent assures Master that repatriation is very easy, however the need of formalities and permissions will take a long time.
Health: Quarantine doctor will revaccinate any crew member with expired certificate.
Communications: VOSA Agency has VHF Channel 16 and it is possible to contact them from Zero Buoy. Communication with Owners is very slow and the cable needs 2 to 3 days to reach the destination. Crew mail requires more than 40 days to reach the vessel.
Density: Halong anchorage 1020. Haiphong port 1000.
General: A lot of people visit the vessel claiming that they are Harbour Officers, Chief Stevedores, Receivers, Surveyors, Stevedores, Customs Officers, Security Officers.
Important: Stevedore's barge which is alongside the vessel at Halong Anchorage is full of rats, which come on board via ladders and other ropes, with result that the vessel becomes infested with rats.
Ships must have on board, from their previous port of call, sufficient quantity of rat poison to kill them after sailing from Vietnam.

DEVELOPMENTS: *1st Phase:* Construction of graving dock (150 m. ×25 m.×6.3 m.) and 200 m. length berth with depth 6.5 m.
2nd Phase: Construction of Dry Dock (180 m.×30 m.×7 m.) and small piers length 100 m. and 150 m.
AUTHORITY: Haiphong port office, No. 12 HoangDieu Street. Harbour Master's office in port area.

AGENT: Vietnam Ocean Shipping Agency (VOSA), 25 Dien Bien Phu Street, Haiphong City. Telegrams: VOSA Haiphong. VHF: Channels 6 and 16.

HO CHI MIN CITY (Saigon Port): 10.45 N. 106.45 E.

DOCUMENTS: See "General" before first port.
PILOTAGE: Upon arrival at pilot station the pilot service should be informed by cable of the exact position of anchorage, draft of the vessel, and the maximum speed the ship can do in the river.

Every evening from 2000 hrs. to 2200 hrs. (local time) radio watch should be kept with Saigon XVS on the frequency of 500 kHz. In case the vessel is to proceed up the river the next morning the pilot service will cable the Master the exact hour of departure from Cape St. Jacques (Vung Tau).

The pilot service will not send any Pilot to ships that do not give the information as to draft, speed of vessel, and exact position at the anchorage station at Cape St. Jacques (Vung Tau).

Pilot station at Vung Tau, Tel: 6. Pilot station at Saigon Tel: 21222 and 90508. Pilot boards at Vinh Dua (Gulf of Coco Trees).
ANCHORAGE: Vessels anchor in approach of "Zero Buoy" (position Lat. 10° 20′ 40″ N., Long. 107° 03′ E.) with depths of about 30 ft.
RESTRICTIONS: River transits, berthing and unberthing are effected in daylight hours only. Vessels should arrive 2 hours before daylight HW. At least 1 ft. keel clearance required. Least depth in channel, 27 ft. below Chart Datum.
MAX. SIZE: Length 673 ft. Vessels can proceed with draft 27 ft. depending on daily tide.
HEALTH: See "General" before first port.

Port officials board at Vung Tau if vessels call at Vung Tau. Free Pratique will be obtained from local authorities. For vessels calling at Saigon port, port officials will board upon docking alongside at Saigon port. Free Pratique will be granted at Saigon.
RADIO: Saigon Port Radio, call sign XVS.
TUGS: Available up to 2,600 h.p. Tankers usually berth without tug assistance.
BERTHING: Depth at quays 26 ft. to 36 ft.
TANKERS: Discharge at Nha-Be: Ex-Caltex Terminal, narrow pier with mooring buoys, depth in berth 27 ft. Ex-Shell Terminal, "T" jetty with mooring buoys, depth in berth 30 ft. No slop disposal facilities.
DENSITY: About 1005 at berths.
MEDICAL: Doctors and hospital facilities available.
FRESH WATER: Can be supplied by barge subject to advance notice of 24 hours.
FUEL: Diesel oil can be supplied.
REPAIRS: Machine shop facilities only.
AIRPORT: Situated about 5 miles from the port. International services.
DRY DOCK: Available at Basoong shipyard.
SURVEYORS: Cargo surveyors: Vinacontrol.

Ship's surveyors: Vires, branch No. 6, 22 Nguyen Hue Sreet, Ho Chi Min City.
AUTHORITY: Saigon Port Director and Harbour Master No. 01 Nguyen Tat Thanh Street, Ho Chi Min City.

NHA TRANG: 12.12 N. 109.13 E.

DOCUMENTS: See "General" before first port.
PILOTAGE: Pilot boards at one of 2 stations.
Southern pilot station: Lat. 12° 09′ 33″ N., Long. 109° 16′ 03″ E.
Northern pilot station: Lat. 12° 14′ 30″ N., Long. 109° 13′ 40″ E. on correct arrival time.
ANCHORAGE: To Pilot's advice.

Anchorage area for ships carrying dangerous cargo in North, West of Hon Mot. Max. depth 20 m. Other cargo ships anchor within 0.5 miles of port pier, max. depth 15 m.
RESTRICTIONS: Pilots board during daylight only.
HEALTH: See "General" before first port.
RADIO: Nha Trang radio, call sign XVN.
VHF: Harbour Master on VHF Channel 16.
TUGS: 3 tugs available. 600 h.p., 400 h.p. and 300 h.p. Use ship's lines.
BERTHING: 1 quay with length 100 m. available, also new construction of 80 m. length. Max. size ship at berth LOA 150 m., depth of water 6.0 m.
CRANES: 3 shore cranes available. 1 max. capacity 12 tons, 2 with max. capacities 5 tons. There are no floating cranes.
BRIDGES: None.
STEVEDORES: Stevedores work 3 shifts: 0000 – 0800 hrs., 0800 – 1600 hrs. and 1600 – 0000 hrs.

Load and discharge rates:
At berth: General cargo: 300 tons per day.
Bulk cargo: 400 tons per day.
Lightering: General cargo: 240 tons per day.
Bulk cargo: 300 tons per day.
TANKERS: Submarine pipe-line with max. pumping pressure of 100 p.s.i. (5 kg.) (300 m. distance from shore).
DENSITY: 1020.
FRESH WATER: Available by barges, cost per ton US$3.00.
FUEL: Supplied by ship chandler, available from self-propelled barge with max. capacity 50 tons.
FIRE PRECAUTIONS: Safety Regulations for tankers and other dangerous cargoes apply.
SURVEYORS: Cargo surveyors: Vinacontrol.

Ship Surveyors: Vires, Branch No. 5, Nha Trang City.
REPAIRS: Contact Agent.
AIRPORT: Nha Trang Airport serves Ho Chi Min City and Hanoi.
TIME: GMT plus 7 hours.
HOLIDAYS: There are no special holidays.
POLICE/AMBULANCE/FIRE: Police post is in inner port. Fire service Tel: 18 or 22135. Ambulance service Tel: 17.
SERVICES: Contact Agent.
SHORE LEAVE: No restrictions.
AUTHORITY: Nha Trang Harbour Master. *Tel:* 22586.

QUANG NINH AREA:

CAMPHA: 21° 01′ 30″ N., 107° 22′ E.

HON GAY: 20° 57′ 18″ N., 107° 03′ 45″ E.

DOCUMENTS: See "General" before first port.

PILOTAGE: Pilot boards at "Zero Buoy" in Haiphong port on correct arrival time.

ANCHORAGE: In Halong Bay, depths 18 m. to 21 m. (low tide) and good holding ground, the places are sheltered from all winds.

RESTRICTION: No restrictions.

MAX. SIZE: At berths LOA 200 m. Breadth no restriction. Draft to Pilot's advice.

HEALTH: See "General" before first port.

RADIO/VHF: Contact Haiphong Radio.

TUGS: 1 tug of 1,200 h.p.

BERTHING: Coal loading only. One quay available at Campha with 500 m. length Hon Gay, one pier of 250 m. length.

CRANES: Shore cranes available.

TANKERS: One mooring berth located at Lat. 20° 57′ 47″ N., Long. 107° 03′ 30″ E.

BRIDGES: None, but tankers going into and going out of mooring berth must contact Harbour Master to get permission to pass under high voltage electric line at Hon Gay Bai Chay.

SHIP'S OFFICERS REPORT: July 1986.

Pilotage: Compulsory. Pilot will board at pilot station between 0600 hrs. and 1800 hrs. (daylight hours). Pilot will bring vessel to either quarantine anchorage or Inner Harbour, via Vung Ha Long Buoyed Channel, for Customs and Immigration clearance.

Pilot station: Lat. 20° 44.2′ N., Long. 107° 10.5′ E.

Anchorages:

Quarantine Anchorage: Lat. 20° 52.2′ N., Long. 107° 06.2′ E.

Inner Harbour Anchorage: 0.8 miles S.S.W. off Hon Gay.

Restrictions: 1. Transit from pilot station to Quarantine Anchorage in daylight hours only.

2. Vung Ha Long Buoyed Channel dredged to 7.0 m. Draft restriction according to tides. Approximate max. draft 10.0 m.

3. Height restriction through Cua Lu to tanker berth 39.0 m. (air draft) at Chart Datum.

Radio/VHF: Hon Gay Pilot and Vosa Hon Gay (Agent) on VHF Channel 16.

Tankers: Tanker berth in position Lat. 20° 58.0′ N., Long. 107° 03.7′ E. Vessel tied up to buoys and discharged via flexible hose of 6 in. Vessel can expect delays. Average discharge rate 180 t.p.h.

Density: Between 1009 and 1017, according to tidal stream.

Agent: Vosa is sole government Agent. Agent acts as interpreter.

AUTHORITY: Quang Ninh Port Director and Harbour Master.

QUY NHON: 13.46 N. 109.14 E.

DOCUMENTS: See "General" before first port. Additional copies of documents may be required.

PILOTAGE: Pilot boards on correct arrival time at "Zero Buoy" (Lat. 13° 44′ 19″ N., Long. 109° 15′ 16″ E.). During bad weather Harbour Master will advise by VHF the anchorage position where Pilot may board in safety.

RESTRICTIONS: Pilot boards during daylight only.

ANCHORAGE: In "Zero Buoy" area with max. depth 10.00 m. If draft exceeds 9.00 m. vessels anchor in the Southern port limits.

MAX. SIZE: LOA 140 m. Draft 6.0 m.

HEALTH: See "General" before first port.

RADIO: Quy Nhon port, call sign XVH.

VHF: Harbour Master on watch: 0630 – 1100 hrs. and 1330 – 1730 hrs. on Channel 16.

TUGS: One tug of 800 h.p. available.

BERTHING: One quay with length 140 m., depth 6.50 m. (low tide) available.

CRANES: 5 shore cranes with capacities 15 tons, 12 tons, 10 tons and 2 shore cranes of 8 tons available.

BRIDGES: None.

STEVEDORES: Stevedores work 3 shifts: 0600 – 1400 hrs., 1400 – 2200 hrs and 2200 – 0600 hrs.

TANKERS: One floating pier for tankers with max. draft 9.0 m. Pipes and hoses of diameter 200 mm. and 159 mm. (6 in.).

DENSITY: 1020.

FRESH WATER: Available at berth.

FUEL: Not guaranteed.

FIRE PRECAUTIONS: Tanker regulations apply and fire service available on wharf.

REPAIRS: Machine shop in port. Minor repairs possible.

DRY DOCKS: 500 tons capacity for small ship construction.

SURVEYORS: Cargo surveyors: Vina Control attend from Hanoi.

Ship surveyors: Vires, branch 5, Nha Trang City.

AIRPORT: Pha Chat airport 35 km. from Quy Nhon city. Flights: Quy Nhon – Hanoi.

HOLIDAYS: There are no special holidays.

AMBULANCE/FIRE: Ambulance, tel. 17 or 2290. Fire, tel. 18 or 2291.

SERVICES: Contact Agent.

AUTHORITY: Quy Nhon Port Director and Harbour Master. *Tel:* 2221.

VUNG TAU: 10.21 N. 107.04 E.

DOCUMENTS/HEALTH: See "General" before first port.

PILOTAGE: Pilot boat arrives at "Zero Buoy" in Saigon port on correct arrival time.

RADIO/VHF: Contact Saigon Port.

TANKERS: Petroleum and gas port.

AUTHORITY: Port Director and Harbour Master authorised by Director of General Department of Petroleum and Gas.

NOTES

Please also advise Shipping Guides Ltd.

Virgin Islands

FREDERIKSTED, St. Croix: 17.43 N. 64.53 W.

DOCUMENTS: All forms are standard U.S. Government Forms:
Passenger List (I-418) – 3 copies.
Crew List (I-418) – 3 copies.
Clearance from Last Port.
Inward Customs Manifest (1302) – 4 copies.
Ship's Stores Declaration – Customs Form 1303 – 2 copies.
Crew Effects Declaration – Customs Form 1304 – 1 copy.
(Also see separate headings – "Health" – "Customs" – "Immigration").

PILOTAGE: Services available day or night. Payment for Pilot services is mandatory whether Master uses Pilot or not. (Vessels commissioned by the U.S. or foreign government, yachts and vessels under 100 gross tons are exempt from pilotage fees, except when the services of a Pilot are requested).

ANCHORAGE: Open roadstead on the lee (West) side of St. Croix, providing a good anchorage with no significant tide.

HEALTH: See "Health Regulations" before first U.S.A. Port (Albany).

Garbage should be disposed of beyond the 3-mile limit. On passing the 3-mile limit all garbage disposal units which open to the sea should be closed. All garbage should then be placed in covered cans and retained on board until the ship is again beyond the 3-mile limit.

RADIO: *(a)* Vessels may communicate with Island via:

Mackay Radio, Amagansett, New York	Call Letters WSL
Chatham, Massachusetts Radio	Call Letters WCC
Lantana Radio, Florida	Call Letters WOE
Barbados Radio, Barbados	Call Letters VPO
Destrellan Radio, Guadeloupe	Call Letters FFO
Fort de France Radio, Martinique	Call Letters FFP

All stations maintaining 24-hour service. These radio stations then relay the messages by cablegram to Frederiksted via either ITT World Communications Inc., Cable and Wireless or Western Union International.

(b) Master of every vessel arriving Frederiksted is required to give at least 24 hours advance notice of arrival to Captain of the Port, U.S. Coast Guard – San Juan, Puerto Rico, by wireless on 500 kHz or by radio telephone 2182 kHz. Call Letters for U.S. Coast Guard, San Juan, Puerto Rico – NMR.

(c) Masters are requested to advise Agent their expected time of arrival as far in advance as is possible, vessels arriving from ports other than U.S. or Caribbean Islands should give at least 7 days' notice, and vessels arriving from U.S. ports should give at least 4 days' notice. In addition, a message should be sent verifying arrival at least 48 hours in advance, with delays reported as necessary. Arrival messages should include information regarding repairs, stores, number of crew and passengers on board. If cash is required, a minimum of 7 days' (prior to date of arrival) notice is mandatory.

(d) While vessels are in Frederiksted the Authorities do not permit the use of the ship's radio transmitters.

(e) Vessels equipped with VHF equipment should commence radio watch on Channel 16 when vessel is 100 miles from St. Croix. Contact with Agents and shore facilities can be made direct or via Virgin Islands Marine Operator – Station WAH – Call Letters WAH.

TUGS: None readily available – tugs can be arranged with 48 hours advance notice.

BERTHING: A government-owned pier with a 1,400 ft. long approachway, bridging Maritime Zone to a pier-head 240 ft. long by 60 ft. wide. Vessels 600 ft. and over with a max. forward draft of 25 ft. have been accommodated.

FRESH WATER: Very limited, delivered by truck.

TIME: GMT minus 4 hours. Atlantic Standard Time.

HOLIDAYS: The following are legal holidays: Sundays; January 1st (New Year's Day); The third Monday in February (President's Day); March 31st (Transfer Day); Holy Thursday; Good Friday; Easter Monday; Whit Monday; Last Monday in May (Memorial Day); June 22nd (Organic Act Day); July 4th (Independence Day); July 3rd (Emancipation Day); Last Monday in July (Supplication Day); The first Monday in September (Labour Day); The second Monday in October (Columbus Day); The fourth Monday in October (Veterans' Day); The fourth Thursday in November (Thanksgiving Day); December 25th (Christmas Day); December 26th (Christmas Second Day), and such other days as the President or the Government may by proclamation declare as holidays.

REGULATIONS: The U.S. Coast Guard strictly enforces the Harbour Pollution Act of 1924, prohibiting discharge of refuse and oil in navigable waters of the U.S. Virgin Islands. Local Port Regulations are similar to those applying in U.S. Mainland Ports.

IMMIGRATION: Recommended that Masters who are unfamiliar with U.S. Immigration Procedure should seek clarification from Agents as far in advance as is possible.

If a vessel arrives direct from a United States mainland port or from Puerto Rico no Immigration inspection will be performed. If a vessel arrives direct from a foreign port the vessel shall undergo Immigration inspection.

Vessels arriving without a visaed crew list, may be able to obtain a waiver from Officer in Charge of U.S. Immigration & Naturalisation Service, by making application on Form I-193. A fee of $10.00 is required to obtain a waiver.

In order to expedite the clearing of the vessel, it is suggested that prior to arrival all passengers subject to inspection should be assembled where the inspection is to be performed.

Stowaways must be reported in ETA Message and listed on a Passenger Manifest (Form I-418) and on Form I-94, and must be reported to the U.S. Immigration Officer as soon as he boards.

All non-resident alien crew members, whether shore leave is required or not, are required to have in their possession valid Passports, Seamen's Book or Identification Card (with photo) and Form I-95 (crewman's Landing Permit) or Form I-184 (Alien Crewman's Permit and Identification Card) on arrival. All resident alien crew members are required to have in their possession Alien Registration Receipt Card (Form I-151) on arrival.

CUSTOMS: Customs Officers will board at anchorage or wharf berths, and will require an accommodation ladder.

Vessels required to enter and clear through Customs House:
Vessels loading or unloading cargo;
Vessels embarking or disembarking passengers;
Vessels remaining in port over 24 hours;
Vessels requesting permission for their passengers to go ashore during the stay of the vessel in port.

Vessels in above categories must present following documents:
Clearance from Last Port;
3 copies of Crew List (Form I-418) or substantially similar form – see note below*
3 copies Passenger List (Form I-418) or substantially similar form – see note below*
4 copies Inward Foreign Manifest covering all cargo for discharge at St. Croix, V.I., showing weights or measurements (of basis of how cargo is freighted) on all items (Customs Form 1302).
2 copies Stores List (Engine-Deck-Commissary-Narcotics).
1 copy Crew Effects Declaration (Custom's Form 1304).

* List of passengers and crew shall be on Customs and Immigration Form I-418 or on a substantially similar form, except that where no steerage passengers are aboard upon arrival, the listing of the passengers may be in the form of a vessel "Souvenir List" or similar list, in which the names of the passengers are listed alphabetically by class.

Sealing of Stores: Upon arrival of a vessel from a foreign port, or a vessel engaged in foreign trade from a domestic port, sea stores and ship's stores not required for immediate use of consumption on board while vessel is in port and articles acquired abroad by officers and members of crew, for which no permit to land has been issued, shall be placed under seal, unless Customs Officer is of the opinion that circumstances do not require such action. Customs Inspectors in charge of vessel, from time to time, may issue stores from under seal for consumption on board by passengers and crew.

Passengers disembarking must present personal baggage declaration if from foreign.

SHORE GANGWAYS: Available.

LAUNCHES/TENDERS: Not available.

AIRPORT: Distant 8.5 miles.

AUTHORITY: Virgin Islands Port Authority, Box 1707, St. Thomas, Virgin Islands, U.S.A. 00801. *Tel:* (809) 774-1629 (St. Thomas), (809) 778-3131 (St. Croix). *Contact:* Jean Bozzuto (St. Thomas, Larry Finch (St. Croix).

LIMETREE BAY, St. Croix: 17.41 N. 64.44 W.

(See Plan)

LOCATION: The facilities of Hess Oil Virgin Islands Corp. (HOVIC) are located in Limetree Bay on the South coast of the island of St. Croix, U.S. Virgin Islands. St. Croix is 32 miles South of St. Thomas and St. John Islands and 50 miles S.E. of the island of Puerto Rico. It is the largest of the U.S. Virgin Islands being 19 miles long and averages 3.5 miles in width.

The Sea Buoy "ELB" No. 2 marking the entrance to Limetree Bay channel is located in 60 ft. of water on the Westerly side of the channel: Lat. 17° 40′ 42″ N., Long. 64° 44′ 18″ W.

The Sea Buoy is painted red and is equipped with a flashing white light having a 1 sec. flash, 9 sec. eclipse with a visibility of 7 miles.

DOCUMENTS: Clearance (U.S. – Foreign). Inward clearance is effected on board immediately after docking. Clearance should be made for Christiansted, St. Croix, via Limetree Bay.

The following documents are required by the Customs and Immigration Authorities for entry and clearance:
Master's Certificate on Preliminary Entry.
Master's Oath.
Stores List.
Crew Purchase List (Curio List).
Inward Foreign Manifest.
Quarantine Free Pratique.
Derat Certificate.
Crew List (Certified).
Clearance from Last Port.
Crew Landing Permits.
Passenger List (if any passengers).

HEALTH: National quarantine laws are enforced in the U.S. Virgin Islands by officers of the U.S. Public Health Service. All vessels are subject to inspection.

RADIO: Masters are requested to advise both HOVIC – St. Croix and their Agents by radio 48 hours and 24 hours in advance of their ETA giving the vessel's name, date and hour of arrival (local time), bunkers and water required.

PILOTAGE: Service is available 24 hours a day and is compulsory for all vessels using HOVIC facilities in Limetree Bay. The HOVIC Harbour Master acts as Pilot and will assist the Master in docking and undocking vessels using Hess Oil facilities; however, the Master of the vessel retains full responsibility for the ship at all times. The Pilot can be contacted by VHF Channel 16. Pilot boards at the Sea Buoy, position Lat. 17° 40.7′ N., Long. 64° 44.3′ W. Vessels over 45,000 d.w.t. are subject to movements in daylight only. Vessels should remain outside the Sea Buoy until boarded by the Pilot. The Pilot will be placed aboard by a company tug.

The tug "Hovic 1" is equipped with a radio-telephone having the following crystals: 2182 kHz U.S.C.G., 2638 kHz Ship-to-ship. 2738 kHz Ship-to-ship, 2134 kHz San Juan, Puerto Rico and Galveston, Texas. Ships having the above crystals should call the "Hovic 1" 3 hours before their arrival at the Sea Buoy, and advise of any change in their ETA.

ANCHORAGE: There is no suitable anchorage for deep draft vessels off the port. Normal practice is to stop engines and wait 6 to 8 miles from the Sea Buoy if required to wait instructions. In bad weather vessels should proceed to Frederiksted and anchor in the vicinity of the long pier in depths of 30 ft. to 60 ft. Vessels shall have their anchors ready to let go upon entering the channel into Limetree Bay.

APPROACHES: Entrance to channel marked by a black Sea Buoy, equipped with a white flashing light, visible 7 miles. The buoy (ELB No. 2) (flashing every 10 secs.) is at the West side of the channel (Lat. 17° 40′ 42″ N., Long. 64° 44′ 18″ W.). At Sea Buoy there is 60 ft. of water and the channel has a depth of 60 ft. to Berth Nos. 3 and 4.

The turning basin opens up Eastward from the channel line and is approximately 1,200 ft. long and 1,000 ft. wide. The West turning basin is 1,500 ft. by 1,200 ft. with a max. depth of 35 ft.

RESTRICTIONS: Navigation permitted 24 hours a day except for ships over 50,000 d.w.t.

The Harbour Master will check and report on each vessel's draft before piloting them inbound or outbound.

TUGS: Tug assistance in the channel, docking and undocking is mandatory and is provided by 3×1,800 h.p. diesel tugs stationed in the port to provide this service. All tugs are under the orders of the HOVIC Harbour Master and are equipped with fire pumps and monitors to assist in fire fighting.

There are also 2 tugs of 7,000 h.p. available for the mooring of large tankers.

NOTICE OF READINESS: Notice of Readiness to load or discharge is a warranty that the vessel is in all respects ready to load or discharge, and that all of the ship's equipment (including, but not limited to tanks, pumps, valves, and pipe-lines) is ready and fit to load or discharge petroleum and/or petrochemical products. Notice of Readiness will not be accepted unless the vessel is in all respects ready to load or discharge as appropriate. Vessel will not be deemed ready to load or discharge and pumping will not commence until the senior deck officer shall have executed and delivered to HOVIC a "Declaration of inspection prior to bulk cargo transfer" as required by U.S. Coast Guard Regulations.

BERTHING:

Hess Hovic Terminal: A shore gangway is provided.

There are at present, 7 berths on finger pier, 3 on East side and 4 on West side.

Deepest berths are No. 3 and No. 4 each with 60 ft. depth of water alongside.

Port Alucroix: Situated to the West of Hess Oil Terminal. The port is entered via the Krause Lagoon Channel with a controlling depth of 35 ft. at MLW, and width of 300 ft. At the head of the lagoon is the Martin Marietta Alumina Terminal.

Pilot boards approximately 2.5 miles South of Martin Marietta Alumina Sea Buoy Nos. 1 and 2.

Container Port: Situated close West of the Hess Oil Terminal. The port is entered via the Krause Lagoon Channel and the container port channel. Length of pier 1,200 ft. Depth in channel and turning basin 35 ft.

1×30 ton "Paceco" portainer with telescopic spreader to handle 20 ft., 35 ft. and 40 ft. containers.

BALLAST: United States laws prohibit the pumping overboard of dirty ballast while a vessel is within U.S. coastal waters. All ballast must be pumped to facilities available ashore. However, if a vessel is especially equipped with clean segregated systems which are reserved for ballast use only, it is permissible to pump overboard at the dock after first being inspected and approved by the Dock Master.

In pumping dirty ballast ashore, the ballast is received through 1×12 in. shore line at a max. discharge pressure to shore installations of 125 p.s.i. The ballast is pumped into a ballast facility about 1 mile North of the dock. Due to the limited facilities and to the possibility of 2 vessels deballasting at the same time, it is requested that vessels arrive with the minimum possible ballast.

The U.S. Oil Pollution Act of 1924 applies to the Pollution of Coastal Waters. Violators are subject to fines and a year's imprisonment for offence.

LOADING: Loading operations are normally carried out at relatively high pumping rates. Loading rates may be reduced by request. Loading cargo overall will not be permitted without specific written authorisation from HOVIC's General Manager.

Hose pressures should not exceed 125 p.s.i. during loading or discharging.

Oil Dock is serviced by: 1×24 in. diameter crude line, 1×24 in. diameter No. 6 oil line. 1×20 in. diameter gasoline line, 1×20 in. No. 2 oil line, 1×10 in. diameter kerosene line, 1×12 in. diameter ballast line, 1×8 in. diameter fresh water line.

4×10 in. hoses are available for connecting up to each of the 20 in. and 24 in. shore lines – single 10 in. hoses are available for the kerosene and ballast lines.

Oil Dock 2 serviced by: 1×24 in. diameter crude line, 1×24 in. diameter No. 6 oil line.

MEDICAL: Medical attention is generally available from the public hospital at any hour of the day or night to crew members of all vessels. The representative of the ship's Agent should be contacted by the Master with any requests for medical attention for the crew. For each man needing medical or dental attention, a form should be completed in duplicate and signed by the Master, or in his absence, by the Chief Officer. The form should provide the date, patient's name, rating, and the name of the vessel. In case of emergency, or when a patient cannot be moved from the vessel, the Master should advise the ship's Agent by radio if at sea, or on the telephone if in port.

DENSITY: 1025.

FRESH WATER: The island of St. Croix is dependent almost entirely on rainfall for its supply of fresh water. There are wells but many of them are rather saline in nature. As a result fresh water is scarce and expensive. In conjunction with its refinery operation HOVIC operates a desalination plant and limited quantities of fresh water are available providing at least 48 hours' notice of these requirements is given prior to the ship's arrival. All fresh water is metered aboard ship.

FUEL: Both No. 6 fuel oil (Bunker C) and light marine diesel are available by prior arrangement. Advice concerning quantities should be given in the vessel's arrival message (ETA) sent 48 hours prior to arrival.

AIRPORT: Situated 5 miles from port facilities.

SHORE LEAVE: Under normal circumstances, no restrictions are imposed by the Immigration Authorities on shore liberty. Masters are requested to have all crew members on board at least 1 hour prior to departure time, to avoid delay "awaiting crew members". If crew members of foreign vessels are to be given shore leave, Form I-95 must be prepared for each member of the crew.

TIME: The U.S. Virgin Islands use Atlantic Standard Time, which is 4 hours slow of Greenwich Mean Time.

GENERAL: *(a) Immigration:* The United States Immigration laws apply in the U.S. Virgin Islands. Passports and visas are required.

(b) Customs: The Customs collection district of the U.S. Virgin Islands is under the jurisdiction of the U.S. Treasury Department but has its own Customs laws.

(c) Liquors: The transportation of alcoholic beverages inside HOVIC's property is strictly prohibited; consequently, no liquor or beer may be removed from vessels. The only exception to the foregoing is in the case of bonded stores ordered by Masters.

(d) Visitors: No visitors are permitted in the dock area. Only persons on official ship's business are permitted on the piers.

(e) Laundry: Only limited facilities are available to handle ship's laundry.

(f) Surveyors: Representatives of the American Bureau of Shipping, Lloyd's Register and other maritime classification societies are available in San Juan, Puerto Rico on 12 to 24 hours' notice. The ship's Agent will assist Masters in soliciting their services.

(g) Mail: Official and personal mail will be delivered on board by the ship's Agent when vessels are being cleared inwards. Mail received for vessels while in port will be delivered on board prior to sailing. Outgoing mail is accepted from Masters, provided it is accompanied by a mail transmittal slip to support disbursements.

(h) Transportation: Walking through the refinery is not permitted. Arrangements for transportation will have to be made through the ship's Agent or the Refinery General Manager's Office.

(i) Supplies and Repairs: Limited supplies of provisions and marine hardware are available on the island. There are no facilities for major repairs closer than San Juan, Puerto Rico. Machine shops in Christiansted and Fredriksted can assist in making minor repairs.

(j) Overloading: Masters are advised that the international laws are strictly enforced with regard to overloading and should be guided accordingly. In cases where overloaded cargo has to be discharged, all expenses incurred, including ship delay, will be for the vessel's account.

(k) Weather Conditions: The loading and discharge of all crude petroleum and its products will be stopped during any electrical storm. Ullage screens or ullage plugs must be in place. Loading gasoline or other similar low-flash products will be stopped during periods of calms when the heavy vapours cannot be dispersed quickly enough to prevent hazards from accumulated gas pockets. Ship's officers are cautioned to be on their guard during such conditions. In the event of abnormal weather conditions in the area, such as a hurricane, vessels will be notified that additional moorings are required. If the situation so demands, Masters will be told to suspend all operations and proceed to sea until normal weather conditions again prevail.

(l) Demurrage: Vessels are required to vacate berth promptly upon completion of cargo handling operation (loading or discharging operations, as the case may be). Permission to lay alongside at any time the vessel is not engaged in cargo handling operations must be granted in writing by the Dock Master. The Harbour Master will keep vessels advised of other vessels awaiting berth. If any vessel fails to vacate its berth upon completion of cargo handling operations and expiration of free laytime for dock usage as outlined below, the vessel will be responsible for penalties and demurrage as follows:

- (a) To pay dock demurrage.
- (b) To hold HOVIC blameless for any demurrage and damages incurred as a result of other vessels awaiting berth.

The following rules shall govern the determination of demurrage:

- (a) One hour free laytime will be allowed after completion of cargo handling operations. This free time will start at the time cargo hoses are disconnected from the ship's manifold on completion of loading or discharge of cargo. Vessels awaiting cargo papers and/or Customs clearance must vacate the berth within 1 hour of such completion and move outside to wait for their papers.
- (b) Three hours free laytime will be allowed for ballasting after discharge operations.

SHIPMASTER'S REPORT: October 1984.

Vessel: 140,000 d.w.t.

The Pilot boards from one of the large tugs. He can normally step straight on to the accommodation ladder. On departure he uses a pilot ladder only, on the starboard side. 2 large tugs put up 2 lines each forward and after end of main deck. 1 smaller tug puts up 1 line starboard side main deck aft and a fourth tug pushes. Moorings were 2 back springs, then 3 breasts, then 3 head/stern lines. Original I-418 (Crew List) to Immigration and 3 copies for Agent. 1 each of Customs Forms 1300, 1301, 1302 and 1303. The minimum draft requirements apply to departure and arrival.

AUTHORITY: Hess Oil Virgin Islands Corp.

Virgin Islands Port Authority, P.O.Box 1707, St. Thomas, Virgin Islands, U.S.A. 00801. *Tel:* (809) 774-1629 (St. Thomas), (809) 778-3131 (St. Croix). *Contact:* Jean Bozzuto (St. Thomas), Larry Finch (St. Croix).

ROAD HARBOUR & PORT PURCELL, Tortola, British Virgin Islands: 18.25 N. 64.37 W.

PORT LIMITS: All the area of water North of an imaginary line drawn from Burt Point to Hog Point (see BA Chart 2020).

DOCUMENTS:

Clearance from last port;
1 Declaration of Health Certificate;
4 Crew Lists;
2 Crew Store Lists;
2 Ship's Stores Lists;
2 Passenger Lists.

PILOTAGE: Only compulsory for vessels of 200 g.r.t. and over, unless a vessel is in possession of a valid Exemption Certificate issued by the Ports Manager. Pilot boards at Port limits after receiving advice from Agents preferably 12 hours prior to arrival. Link calls made through Tortola Radio, Channel 27 daytime and Channel 16 at night.

Vessels arriving ahead of ETA sound "G" on whistle if unable to advise Agent.

No inward pilotage at night, unless emergency, night Pilotage outwards by special arrangement.

ANCHORAGES: Between Buck Island and Beef Island or immediately South of Port limits, approximately 12 fathoms.

RESTRICTIONS: Anchorage within Port limits prohibited unless authorised by Ports Manager. Max. draft alongside Port Purcell 21 ft.

HEALTH: Customs issue Pratique for vessels with clear bill of health, otherwise request doctor to board on arrival alongside or at anchor.

RADIO: Call sign "Port Purcell" – can be reached by VHF Channel 16. Cable and Wireless maintain a Public Coast Station on Tortola, call sign "Tortola Radio", with an approximate range of 50 miles and provides linked telephone calls between ships and any shore based telephone subscriber. From 0700 – 1900 hrs. watch is kept on Channel 16, at night for emergencies only.

For distances in excess of 50 miles any other convenient shore station, (eg. Barbados, St. Thomas) that will accept messages for onward cabling or telephoning to Tortola.

TUGS: None available.

BERTHING: Port Purcell quay is 800 ft. long, max. draft 21 ft. at any state of tide, salt water. Ships discharge with own gear.

CRANES: Port Purcell has 1 mobile shore crane, max. lift 8 tons. Prior advice required for use.

MEDICAL: Hospital facilities available, no routine inoculations, etc., required unless specially notified.

DENSITY: Entirely salt water within port limits.

FRESH WATER: Available in limited quantities at Port Purcell, approx. delivery 20 t.p.h. and costs US$14.00 per 1,000 gallons.

FUEL: Diesel only for small vessels delivered by road tanker to Port Purcell, 2 hours' notice.

REPAIRS: Minor repairs only.

SURVEYORS: Available.

HATCHES: Opened and closed by crew.

CUSTOMS ALLOWANCES: No sealing of tobacco, wine or spirits.

AIRPORT: Beef Island, 7 miles, regular local flights to St. Thomas, Puerto Rico, Antigua which connect with several main lines to Europe and the Americas.

TIME: GMT minus 4 hours.

HOLIDAYS: Port Purcell closed Christmas Day, Good Friday and August Monday (1st in month).

POLICE/AMBULANCE/FIRE: Dial 999 (emergency). Police station 43422.

TELEPHONES: Telephones available for use on board ship, cost for connecting US $25.00 and 8 cents for local calls.

SHORE LEAVE: No restrictions for crews.

IDENTIFICATION CARDS: None required.

DELAYS: None should be expected. Cargo working is geared to ship's arrival, irrespective of time and 24 hours continuous working if required.

AUTHORITY: Ports Manager and Harbour Master, Road Town, Tortola, Virgin Islands.

ST. THOMAS: 18.20 N. 64.56 W. (See Plan)

Harbour of St. Thomas, U.S.V.I. situated on South side of Island of St. Thomas. It is 1,434 miles from port of New York. Northern side of Island borders on Atlantic Ocean, and Southern side on Caribbean Sea. The Harbour is one of the best in the West Indies, being almost landlocked.

WEATHER: The weather is usually mild with little wind. Squalls when they occur, usually come from the N.E.

DOCUMENTS: *Quarantine, Customs and Immigration* – see "Frederiksted".

Agent:

1 Copy Crew List (Form I-418).
1 Copy Passenger List (Form I-418).

PILOTAGE: Compulsory and available day and night. Pilot Boat has letter "P" on deck house and flies International Code flag "P". Pilots will meet vessels 1 to 3 miles outside harbour, boarding via Jacob's ladder.

ANCHORAGE: Outer Harbour Anchorage located beginning at Scorpion Rock Lighted Buoy No. 1 (Lat. 18° 19′ 25.6″ N., Long. 64° 55′ 08″ W.) thence 180° 1,580 yards; thence 263°, 2,490 yards; thence due North 1,255 yards; thence due East to the Southerly tip of Sprat Point, Water Island; thence to Cowell Point, Hassel Island, and thence to point of beginning. This anchorage is considered good and is about 8 fathoms with sand bottom.

RADIO: The St. Thomas Marine Operator will guard the following from 0600 to 2100 hrs.: Channel 26, 16 VHF, 2009 – 2506 and 2182 kHz AM, and the upper side band (2010.4 – 2507.4 kHz) of the same frequency. The Harbour Master's Office maintain a 24 hour watch on VHF Channel 16 (working on Channel 12).

(b) Master of every vessel arriving at St. Thomas is required to give at least 24 hours advance notice of arrival to Captain of the Port U.S. Coast Guard – San Juan, Puerto Rico by wireless on 500 kHz or by radio telephone 2182 kHz.

(c) Masters are requested to advise Agents their ETA, at least 36 hours in advance. Arrival messages should include cash requirements (local currency U.S. Dollar) and advice regarding repairs, stores, etc. This information is particularly necessary in the cases of vessel arriving on weekends or holidays. For cruise vessels the arrival messages should also include the number of passengers and crew on board.

(d) While vessels are in St. Thomas Harbour, the Authorities do not permit the use of the ship's radio transmitters.

(e) U.S. Coast Guards: This organisation maintains a small Marine Safety Detachment in St. Thomas to observe, service and effect repairs to navigation aids in vicinity of St. Thomas. An 82 ft. Coast Guard Patrol Boat "Point Whitehorn" (82364) is attached to the station for primary purpose of search and rescue work. Maintains watch on VHF Channel 16. Radio telephone marine information broadcasts, including Notices to Mariners, will be made on 2670 kHz, after first making a preliminary announcement on 2182 kHz. Radio telephone urgent and safety broadcasts or Marine Information will continue to be made on 2182 kHz.

TUGS: Normally not considered necessary for docking, however tugs are available for docking and undocking ships.

BERTHING: Wharf of the West Indian Company Limited, located on Eastern shore of harbour basin. Wharf is bulkhead type, 2,234 ft. long, running N.E./S.W., and is well protected to seaward. Mooring bitts are spaced at intervals of 50 ft. There is a "cut out" in the wharf 950 ft. from N.E. corner, which is 22 ft. wide and approximately 3.5 ft. above low water. This ramp is slanting from 8.3 ft. to 3.5 ft. over a distance of 20 ft. Similar type of ramp located on West Corner of wharf. Safe depth alongside from 27 ft. near N.E. end to 30 ft. on S.W. end. Bulwark is 8.3 ft. above mean tide. Average difference between high and low tide is 11 in.

Dockage dues are payable to the West Indian Company Limited, as per tariff.

In the Crown Bay area (access via East or West Gregerie Channels) the V.I. Port Authority maintains facilities which include a pier extending 800 ft. from shore with 500 ft. of berthing space on South side and 200 ft. on North side, where ships up to 25,000 g.r.t. can moor. Controlling depth presently 38 ft. This pier is used for berthing tourist and tanker vessels only. A curved bulkhead at top of Crown Bay, approximately 900 ft. long, is used for Ro/Ro, container and break bulk cargo. Controlling depth

15 ft. 24-hour arrival notice is required.

CARGO HANDLING: Containers are handled at the West Indian Company and the Crown Bay area (V.I. Port Authority), but no special gantry cranes are available. Ro/Ro cargo handled at these facilities as well. No liquid chemicals facilities exist here but there is a small privately-owned LPG plant limited to 20 ft. draft and 250 ft. length. Shell uses this facility for gasoline and light diesel. The "T"-pier in Crown Bay is used for the V.I. Water and Power Authority for movement of fuel and water, and Texaco has its own pipe-line on the same pier for their products.

STEVEDORES: Discharging and/or loading arranged by the West Indian Company Limited for account and risk of vessels.

Rates of discharging and/or loading dependent on vessel's equipment and stowage. However, following may be considered average:

General Cargo 6 weight tons per gang hour.
Bagged Goods 8/10 weight tons per gang hour.
Lumber 10/12 weight tons per gang hour.

Each stevedore gang normally consists of 12 stevedores (10 on board and 2 ashore), 2 winchmen, 1 signalman, 1 foreman.

FUEL: Bunkers are not available except for small craft.

FRESH WATER: Mostly rain water which when available is supplied by the West Indian Company Limited. This supply is limited and is on an emergency basis only. Water may also be requested from the Government of the Virgin Islands in cases of emergency only. Delivery effected by pipe alongside wharf. Water by barge can be delivered in St. Thomas.

PILOTAGE: Service is available 24 hours a day and is compulsory for all vessels using HOVIC facilities in Limetree Bay. The HOVIC Harbour Master acts as Pilot and will assist the Master in docking and undocking vessels using Hess Oil facilities; however, the Master of the vessel retains full responsibility for the ship at all times. The Pilot can be contacted by VHF Channel 16. Pilot boards at the Sea Buoy, position Lat. 17° 40.7′ N., Long. 64° 44.3′ W. Vessels over 45,000 d.w.t. are subject to movements in daylight only. Vessels should remain outside the Sea Buoy until boarded by the Pilot. The Pilot will be placed aboard by a company tug.

The tug "Hovic 1" is equipped with a radio-telephone having the following crystals: 2182 kHz U.S.C.G., 2638 kHz Ship-to-ship. 2738 kHz Ship-to-ship, 2134 kHz San Juan, Puerto Rico and Galveston, Texas. Ships having the above crystals should call the "Hovic 1" 3 hours before their arrival at the Sea Buoy, and advise of any change in their ETA.

ANCHORAGE: There is no suitable anchorage for deep draft vessels off the port. Normal practice is to stop engines and wait 6 to 8 miles from the Sea Buoy if required to wait instructions. In bad weather vessels should proceed to Frederiksted and anchor in the vicinity of the long pier in depths of 30 ft. to 60 ft. Vessels shall have their anchors ready to let go upon entering the channel into Limetree Bay.

APPROACHES: Entrance to channel marked by a black Sea Buoy, equipped with a white flashing light, visible 7 miles. The buoy (ELB No. 2) (flashing every 10 secs.) is at the West side of the channel (Lat. 17° 40′ 42″ N., Long. 64° 44′ 18″ W.). At Sea Buoy there is 60 ft. of water and the channel has a depth of 60 ft. to Berth Nos. 3 and 4.

The turning basin opens up Eastward from the channel line and is approximately 1,200 ft. long and 1,000 ft. wide. The West turning basin is 1,500 ft. by 1,200 ft. with a max. depth of 35 ft.

RESTRICTIONS: Navigation permitted 24 hours a day except for ships over 50,000 d.w.t.

The Harbour Master will check and report on each vessel's draft before piloting them inbound or outbound.

TUGS: Tug assistance in the channel, docking and undocking is mandatory and is provided by 3×1,800 h.p. diesel tugs stationed in the port to provide this service. All tugs are under the orders of the HOVIC Harbour Master and are equipped with fire pumps and monitors to assist in fire fighting.

There are also 2 tugs of 7,000 h.p. available for the mooring of large tankers.

NOTICE OF READINESS: Notice of Readiness to load or discharge is a warranty that the vessel is in all respects ready to load or discharge, and that all of the ship's equipment (including, but not limited to tanks, pumps, valves, and pipe-lines) is ready and fit to load or discharge petroleum and/or petrochemical products. Notice of Readiness will not be accepted unless the vessel is in all respects ready to load or discharge as appropriate. Vessel will not be deemed ready to load or discharge and pumping will not commence until the senior deck officer shall have executed and delivered to HOVIC a "Declaration of inspection prior to bulk cargo transfer" as required by U.S. Coast Guard Regulations.

BERTHING:

Hess Hovic Terminal: A shore gangway is provided.

There are at present, 7 berths on finger pier, 3 on East side and 4 on West side.

Deepest berths are No. 3 and No. 4 each with 60 ft. depth of water alongside.

Port Alucroix: Situated to the West of Hess Oil Terminal. The port is entered via the Krause Lagoon Channel with a controlling depth of 35 ft. at MLW, and width of 300 ft. At the head of the lagoon is the Martin Marietta Alumina Terminal.

Pilot boards approximately 2.5 miles South of Martin Marietta Alumina Sea Buoy Nos. 1 and 2.

Container Port: Situated close West of the Hess Oil Terminal. The port is entered via the Krause Lagoon Channel and the container port channel. Length of pier 1,200 ft. Depth in channel and turning basin 35 ft.

1×30 ton "Paceco" portainer with telescopic spreader to handle 20 ft., 35 ft. and 40 ft. containers.

BALLAST: United States laws prohibit the pumping overboard of dirty ballast while a vessel is within U.S. coastal waters. All ballast must be pumped to facilities available ashore. However, if a vessel is especially equipped with clean segregated systems which are reserved for ballast use only, it is permissible to pump overboard at the dock after first being inspected and approved by the Dock Master.

In pumping dirty ballast ashore, the ballast is received through 1×12 in. shore line at a max. discharge pressure to shore installations of 125 p.s.i. The ballast is pumped into a ballast facility about 1 mile North of the dock. Due to the limited facilities and to the possibility of 2 vessels deballasting at the same time, it is requested that vessels arrive with the minimum possible ballast.

The U.S. Oil Pollution Act of 1924 applies to the Pollution of Coastal Waters. Violators are subject to fines and a year's imprisonment for offence.

LOADING: Loading operations are normally carried out at relatively high pumping rates. Loading rates may be reduced by request. Loading cargo overall will not be permitted without specific written authorisation from HOVIC's General Manager.

Hose pressures should not exceed 125 p.s.i. during loading or discharging.

Oil Dock is serviced by: 1×24 in. diameter crude line, 1×24 in. diameter No. 6 oil line. 1×20 in. diameter gasoline line, 1×20 in. No. 2 oil line, 1×10 in. diameter kerosene line, 1×12 in. diameter ballast line, 1×8 in. diameter fresh water line.

4×10 in. hoses are available for connecting up to each of the 20 in. and 24 in. shore lines – single 10 in. hoses are available for the kerosene and ballast lines.

Oil Dock 2 serviced by: 1×24 in. diameter crude line, 1×24 in. diameter No. 6 oil line.

MEDICAL: Medical attention is generally available from the public hospital at any hour of the day or night to crew members of all vessels. The representative of the ship's Agent should be contacted by the Master with any requests for medical attention for the crew. For each man needing medical or dental attention, a form should be completed in duplicate and signed by the Master, or in his absence, by the Chief Officer. The form should provide the date, patient's name, rating, and the name of the vessel. In case of emergency, or when a patient cannot be moved from the vessel, the Master should advise the ship's Agent by radio if at sea, or on the telephone if in port.

DENSITY: 1025.

FRESH WATER: The island of St. Croix is dependent almost entirely on rainfall for its supply of fresh water. There are wells but many of them are rather saline in nature. As a result fresh water is scarce and expensive. In conjunction with its refinery operation HOVIC operates a desalination plant and limited quantities of fresh water are available providing at least 48 hours' notice of these requirements is given prior to the ship's arrival. All fresh water is metered aboard ship.

FUEL: Both No. 6 fuel oil (Bunker C) and light marine diesel are available by prior arrangement. Advice concerning quantities should be given in the vessel's arrival message (ETA) sent 48 hours prior to arrival.

AIRPORT: Situated 5 miles from port facilities.

SHORE LEAVE: Under normal circumstances, no restrictions are imposed by the Immigration Authorities on shore liberty. Masters are requested to have all crew members on board at least 1 hour prior to departure time, to avoid delay "awaiting crew members". If crew members of foreign vessels are to be given shore leave, Form I-95 must be prepared for each member of the crew.

TIME: The U.S. Virgin Islands use Atlantic Standard Time, which is 4 hours slow of Greenwich Mean Time.

GENERAL: *(a) Immigration:* The United States Immigration laws apply in the U.S. Virgin Islands. Passports and visas are required.

(b) Customs: The Customs collection district of the U.S. Virgin Islands is under the jurisdiction of the U.S. Treasury Department but has its own Customs laws.

(c) Liquors: The transportation of alcoholic beverages inside HOVIC's property is strictly prohibited; consequently, no liquor or beer may be removed from vessels. The only exception to the foregoing is in the case of bonded stores ordered by Masters.

(d) Visitors: No visitors are permitted in the dock area. Only persons on official ship's business are permitted on the piers.

(e) Laundry: Only limited facilities are available to handle ship's laundry.

(f) Surveyors: Representatives of the American Bureau of Shipping, Lloyd's Register and other maritime classification societies are available in San Juan, Puerto Rico on 12 to 24 hours' notice. The ship's Agent will assist Masters in soliciting their services.

(g) Mail: Official and personal mail will be delivered on board by the ship's Agent when vessels are being cleared inwards. Mail received for vessels while in port will be delivered on board prior to sailing. Outgoing mail is accepted from Masters, provided it is accompanied by a mail transmittal slip to support disbursements.

(h) Transportation: Walking through the refinery is not permitted. Arrangements for transportation will have to be made through the ship's Agent or the Refinery General Manager's Office.

(i) Supplies and Repairs: Limited supplies of provisions and marine hardware are available on the island. There are no facilities for major repairs closer than San Juan, Puerto Rico. Machine shops in Christiansted and Fredriksted can assist in making minor repairs.

(j) Overloading: Masters are advised that the international laws are strictly enforced with regard to overloading and should be guided accordingly. In cases where overloaded cargo has to be discharged, all expenses incurred, including ship delay, will be for the vessel's account.

(k) Weather Conditions: The loading and discharge of all crude petroleum and its products will be stopped during any electrical storm. Ullage screens or ullage plugs must be in place. Loading gasoline or other similar low-flash products will be stopped during periods of calms when the heavy vapours cannot be dispersed quickly enough to prevent hazards from accumulated gas pockets. Ship's officers are cautioned to be on their guard during such conditions. In the event of abnormal weather conditions in the area, such as a hurricane, vessels will be notified that additional moorings are required. If the situation so demands, Masters will be told to suspend all operations and proceed to sea until normal weather conditions again prevail.

(l) Demurrage: Vessels are required to vacate berth promptly upon completion of cargo handling operation (loading or discharging operations, as the case may be). Permission to lay alongside at any time the vessel is not engaged in cargo handling operations must be granted in writing by the Dock Master. The Harbour Master will keep vessels advised of other vessels awaiting berth. If any vessel fails to vacate its berth upon completion of cargo handling operations and expiration of free laytime for dock usage as outlined below, the vessel will be responsible for penalties and demurrage as follows:

- *(a)* To pay dock demurrage.
- *(b)* To hold HOVIC blameless for any demurrage and damages incurred as a result of other vessels awaiting berth.

The following rules shall govern the determination of demurrage:

- *(a)* One hour free laytime will be allowed after completion of cargo handling operations. This free time will start at the time cargo hoses are disconnected from the ship's manifold on completion of loading or discharge of cargo. Vessels awaiting cargo papers and/or Customs clearance must vacate the berth within 1 hour of such completion and move outside to wait for their papers.
- *(b)* Three hours free laytime will be allowed for ballasting after discharge operations.

SHIPMASTER'S REPORT: October 1984.

Vessel: 140,000 d.w.t.

The Pilot boards from one of the large tugs. He can normally step straight on to the accommodation ladder. On departure he uses a pilot ladder only, on the starboard side. 2 large tugs put up 2 lines each forward and after end of main deck. 1 smaller tug puts up 1 line starboard side main deck aft and a fourth tug pushes. Moorings were 2 back springs, then 3 breasts, then 3 head/stern lines. Original I-418 (Crew List) to Immigration and 3 copies for Agent. 1 each of Customs Forms 1300, 1301, 1302 and 1303. The minimum draft requirements apply to departure and arrival.

The Harbour Master's Office maintain a 24 hour watch on VHF Channel 16 (working on Channel 12).

(b) Master of every vessel arriving at St. Thomas is required to give at least 24 hours advance notice of arrival to Captain of the Port U.S. Coast Guard – San Juan, Puerto Rico by wireless on 500 kHz or by radio telephone 2182 kHz.

(c) Masters are requested to advise Agents their ETA, at least 36 hours in advance. Arrival messages should include cash requirements (local currency U.S. Dollar) and advice regarding repairs, stores, etc. This information is particularly necessary in the cases of vessel arriving on weekends or holidays. For cruise vessels the arrival messages should also include the number of passengers and crew on board.

(d) While vessels are in St. Thomas Harbour, the Authorities do not permit the use of the ship's radio transmitters.

(e) U.S. Coast Guards: This organisation maintains a small Marine Safety Detachment in St. Thomas to observe, service and effect repairs to navigation aids in vicinity of St. Thomas. An 82 ft. Coast Guard Patrol Boat "Point Whitehorn" (82364) is attached to the station for primary purpose of search and rescue work. Maintains watch on VHF Channel 16. Radio telephone marine information broadcasts, including Notices to Mariners, will be made on 2670 kHz, after first making a preliminary announcement on 2182 kHz. Radio telephone urgent and safety broadcasts or Marine Information will continue to be made on 2182 kHz.

TUGS: Normally not considered necessary for docking, however tugs are available for docking and undocking ships.

BERTHING: Wharf of the West Indian Company Limited, located on Eastern shore of harbour basin. Wharf is bulkhead type, 2,234 ft. long, running N.E./S.W., and is well protected to seaward. Mooring bitts are spaced at intervals of 50 ft. There is a "cut out" in the wharf 950 ft. from N.E. corner, which is 22 ft. wide and approximately 3.5 ft. above low water. This ramp is slanting from 8.3 ft. to 3.5 ft. over a distance of 20 ft. Similar type of ramp located on West Corner of wharf. Safe depth alongside from 27 ft. near N.E. end to 30 ft. on S.W. end. Bulwark is 8.3 ft. above mean tide. Average difference between high and low tide is 11 in.

Dockage dues are payable to the West Indian Company Limited, as per tariff.

In the Crown Bay area (access via East or West Gregerie Channels) the V.I. Port Authority maintains facilities which include a pier extending 800 ft. from shore with 500 ft. of berthing space on South side and 200 ft. on North side, where ships up to 25,000 g.r.t. can moor. Controlling depth presently 38 ft. This pier is used for berthing tourist and tanker vessels only. A curved bulkhead at top of Crown Bay, approximately 900 ft. long, is used for Ro/Ro, container and break bulk cargo. Controlling depth

15 ft. 24-hour arrival notice is required.

CARGO HANDLING: Containers are handled at the West Indian Company and the Crown Bay area (V.I. Port Authority), but no special gantry cranes are available. Ro/Ro cargo handled at these facilities as well. No liquid chemicals facilities exist here but there is a small privately-owned LPG plant limited to 20 ft. draft and 250 ft. length. Shell uses this facility for gasoline and light diesel. The "T"-pier in Crown Bay is used for the V.I. Water and Power Authority for movement of fuel and water, and Texaco has its own pipe-line on the same pier for their products.

STEVEDORES: Discharging and/or loading arranged by the West Indian Company Limited for account and risk of vessels.

Rates of discharging and/or loading dependent on vessel's equipment and stowage. However, following may be considered average:

General Cargo 6 weight tons per gang hour.
Bagged Goods 8/10 weight tons per gang hour.
Lumber 10/12 weight tons per gang hour.

Each stevedore gang normally consists of 12 stevedores (10 on board and 2 ashore), 2 winchmen, 1 signalman, 1 foreman.

FUEL: Bunkers are not available except for small craft.

FRESH WATER: Mostly rain water which when available is supplied by the West Indian Company Limited. This supply is limited and is on an emergency basis only. Water may also be requested from the Government of the Virgin Islands in cases of emergency only. Delivery effected by pipe alongside wharf. Water by barge can be delivered in St. Thomas.

PILOTAGE: Service is available 24 hours a day and is compulsory for all vessels using HOVIC facilities in Limetree Bay. The HOVIC Harbour Master acts as Pilot and will assist the Master in docking and undocking vessels using Hess Oil facilities; however, the Master of the vessel retains full responsibility for the ship at all times. The Pilot can be contacted by VHF Channel 16. Pilot boards at the Sea Buoy, position Lat. 17° 40.7′ N., Long. 64° 44.3′ W. Vessels over 45,000 d.w.t. are subject to movements in daylight only. Vessels should remain outside the Sea Buoy until boarded by the Pilot. The Pilot will be placed aboard by a company tug.

The tug "Hovic 1" is equipped with a radio-telephone having the following crystals: 2182 kHz U.S.C.G., 2638 kHz Ship-to-ship, 2738 kHz Ship-to-ship, 2134 kHz San Juan, Puerto Rico and Galveston, Texas. Ships having the above crystals should call the "Hovic 1" 3 hours before their arrival at the Sea Buoy, and advise of any change in their ETA.

ANCHORAGE: There is no suitable anchorage for deep draft vessels off the port. Normal practice is to stop engines and wait 6 to 8 miles from the Sea Buoy if required to wait instructions. In bad weather vessels should proceed to Frederiksted and anchor in the vicinity of the long pier in depths of 30 ft. to 60 ft. Vessels shall have their anchors ready to let go upon entering the channel into Limetree Bay.

APPROACHES: Entrance to channel marked by a black Sea Buoy, equipped with a white flashing light, visible 7 miles. The buoy (ELB No. 2) (flashing every 10 secs.) is at the West side of the channel (Lat. 17° 40′ 42″ N., Long. 64° 44′ 18″ W.). At Sea Buoy there is 60 ft. of water and the channel has a depth of 60 ft. to Berth Nos. 3 and 4.

The turning basin opens up Eastward from the channel line and is approximately 1,200 ft. long and 1,000 ft. wide. The West turning basin is 1,500 ft. by 1,200 ft. with a max. depth of 35 ft.

RESTRICTIONS: Navigation permitted 24 hours a day except for ships over 50,000 d.w.t.

The Harbour Master will check and report on each vessel's draft before piloting them inbound or outbound.

TUGS: Tug assistance in the channel, docking and undocking is mandatory and is provided by 3×1,800 h.p. diesel tugs stationed in the port to provide this service. All tugs are under the orders of the HOVIC Harbour Master and are equipped with fire pumps and monitors to assist in fire fighting.

There are also 2 tugs of 7,000 h.p. available for the mooring of large tankers.

NOTICE OF READINESS: Notice of Readiness to load or discharge is a warranty that the vessel is in all respects ready to load or discharge, and that all of the ship's equipment (including, but not limited to tanks, pumps, valves, and pipe-lines) is ready and fit to load or discharge petroleum and/or petrochemical products. Notice of Readiness will not be accepted unless the vessel is in all respects ready to load or discharge as appropriate. Vessel will not be deemed ready to load or discharge and pumping will not commence until the senior deck officer shall have executed and delivered to HOVIC a "Declaration of inspection prior to bulk cargo transfer" as required by U.S. Coast Guard Regulations.

BERTHING:

Hess Hovic Terminal: A shore gangway is provided.

There are at present, 7 berths on finger pier, 3 on East side and 4 on West side.

Deepest berths are No. 3 and No. 4 each with 60 ft. depth of water alongside.

Port Alucroix: Situated to the West of Hess Oil Terminal. The port is entered via the Krause Lagoon Channel with a controlling depth of 35 ft. at MLW, and width of 300 ft. At the head of the lagoon is the Martin Marietta Alumina Terminal.

Pilot boards approximately 2.5 miles South of Martin Marietta Alumina Sea Buoy Nos. 1 and 2.

Container Port: Situated close West of the Hess Oil Terminal. The port is entered via the Krause Lagoon Channel and the container port channel. Length of pier 1,200 ft. Depth in channel and turning basin 35 ft.

1×30 ton "Paceco" portainer with telescopic spreader to handle 20 ft., 35 ft. and 40 ft. containers.

BALLAST: United States laws prohibit the pumping overboard of dirty ballast while a vessel is within U.S. coastal waters. All ballast must be pumped to facilities available ashore. However, if a vessel is especially equipped with clean segregated systems which are reserved for ballast use only, it is permissible to pump overboard at the dock after first being inspected and approved by the Dock Master.

In pumping dirty ballast ashore, the ballast is received through 1×12 in. shore line at a max. discharge pressure to shore installations of 125 p.s.i. The ballast is pumped into a ballast facility about 1 mile North of the dock. Due to the limited facilities and to the possibility of 2 vessels deballasting at the same time, it is requested that vessels arrive with the minimum possible ballast.

The U.S. Oil Pollution Act of 1924 applies to the Pollution of Coastal Waters. Violators are subject to fines and a year's imprisonment for offence.

LOADING: Loading operations are normally carried out at relatively high pumping rates. Loading rates may be reduced by request. Loading cargo overall will not be permitted without specific written authorisation from HOVIC's General Manager.

Hose pressures should not exceed 125 p.s.i. during loading or discharging.

Oil Dock is serviced by: 1×24 in. diameter crude line, 1×24 in. diameter No. 6 oil line. 1×20 in. diameter gasoline line, 1×20 in. No. 2 oil line, 1×10 in. diameter kerosene line, 1×12 in. diameter ballast line, 1×8 in. diameter fresh water line.

4×10 in. hoses are available for connecting up to each of the 20 in. and 24 in. shore lines – single 10 in. hoses are available for the kerosene and ballast lines.

Oil Dock 2 serviced by: 1×24 in. diameter crude line, 1×24 in. diameter No. 6 oil line.

MEDICAL: Medical attention is generally available from the public hospital at any hour of the day or night to crew members of all vessels. The representative of the ship's Agent should be contacted by the Master with any requests for medical attention for the crew. For each man needing medical or dental attention, a form should be completed in duplicate and signed by the Master, or in his absence, by the Chief Officer. The form should provide the date, patient's name, rating, and the name of the vessel. In case of emergency, or when a patient cannot be moved from the vessel, the Master should advise the ship's Agent by radio if at sea, or on the telephone if in port.

DENSITY: 1025.

FRESH WATER: The island of St. Croix is dependent almost entirely on rainfall for its supply of fresh water. There are wells but many of them are rather saline in nature. As a result fresh water is scarce and expensive. In conjunction with its refinery operation HOVIC operates a desalination plant and limited quantities of fresh water are available providing at least 48 hours' notice of these requirements is given prior to the ship's arrival. All fresh water is metered aboard ship.

FUEL: Both No. 6 fuel oil (Bunker C) and light marine diesel are available by prior arrangement. Advice concerning quantities should be given in the vessel's arrival message (ETA) sent 48 hours prior to arrival.

AIRPORT: Situated 5 miles from port facilities.

SHORE LEAVE: Under normal circumstances, no restrictions are imposed by the Immigration Authorities on shore liberty. Masters are requested to have all crew members on board at least 1 hour prior to departure time, to avoid delay "awaiting crew members". If crew members of foreign vessels are to be given shore leave, Form I-95 must be prepared for each member of the crew.

TIME: The U.S. Virgin Islands use Atlantic Standard Time, which is 4 hours slow of Greenwich Mean Time.

GENERAL: *(a) Immigration:* The United States Immigration laws apply in the U.S. Virgin Islands. Passports and visas are required.

(b) Customs: The Customs collection district of the U.S. Virgin Islands is under the jurisdiction of the U.S. Treasury Department but has its own Customs laws.

(c) Liquors: The transportation of alcoholic beverages inside HOVIC's property is strictly prohibited; consequently, no liquor or beer may be removed from vessels. The only exception to the foregoing is in the case of bonded stores ordered by Masters.

(d) Visitors: No visitors are permitted in the dock area. Only persons on official ship's business are permitted on the piers.

(e) Laundry: Only limited facilities are available to handle ship's laundry.

(f) Surveyors: Representatives of the American Bureau of Shipping, Lloyd's Register and other maritime classification societies are available in San Juan, Puerto Rico on 12 to 24 hours' notice. The ship's Agent will assist Masters in soliciting their services.

(g) Mail: Official and personal mail will be delivered on board by the ship's Agent when vessels are being cleared inwards. Mail received for vessels while in port will be delivered on board prior to sailing. Outgoing mail is accepted from Masters, provided it is accompanied by a mail transmittal slip to support disbursements.

(h) Transportation: Walking through the refinery is not permitted. Arrangements for transportation will have to be made through the ship's Agent or the Refinery General Manager's Office.

(i) Supplies and Repairs: Limited supplies of provisions and marine hardware are available on the island. There are no facilities for major repairs closer than San Juan, Puerto Rico. Machine shops in Christiansted and Fredriksted can assist in making minor repairs.

(j) Overloading: Masters are advised that the international laws are strictly enforced with regard to overloading and should be guided accordingly. In cases where overloaded cargo has to be discharged, all expenses incurred, including ship delay, will be for the vessel's account.

(k) Weather Conditions: The loading and discharge of all crude petroleum and its products will be stopped during any electrical storm. Ullage screens or ullage plugs must be in place. Loading gasoline or other similar low-flash products will be stopped during periods of calms when the heavy vapours cannot be dispersed quickly enough to prevent hazards from accumulated gas pockets. Ship's officers are cautioned to be on their guard during such conditions. In the event of abnormal weather conditions in the area, such as a hurricane, vessels will be notified that additional moorings are required. If the situation so demands, Masters will be told to suspend all operations and proceed to sea until normal weather conditions again prevail.

(l) Demurrage: Vessels are required to vacate berth promptly upon completion of cargo handling operation (loading or discharging operations, as the case may be). Permission to lay alongside at any time the vessel is not engaged in cargo handling operations must be granted in writing by the Dock Master. The Harbour Master will keep vessels advised of other vessels awaiting berth. If any vessel fails to vacate its berth upon completion of cargo handling operations and expiration of free laytime for dock usage as outlined below, the vessel will be responsible for penalties and demurrage as follows:

(a) To pay dock demurrage.

(b) To hold HOVIC blameless for any demurrage and damages incurred as a result of other vessels awaiting berth.

The following rules shall govern the determination of demurrage:

(a) One hour free laytime will be allowed after completion of cargo handling operations. This free time will start at the time cargo hoses are disconnected from the ship's manifold on completion of loading or discharge of cargo. Vessels awaiting cargo papers and/or Customs clearance must vacate the berth within 1 hour of such completion and move outside to wait for their papers.

(b) Three hours free laytime will be allowed for ballasting after discharge operations.

SHIPMASTER'S REPORT: October 1984.

Vessel: 140,000 d.w.t.

The Pilot boards from one of the large tugs. He can normally step straight on to the accommodation ladder. On departure he uses a pilot ladder only, on the starboard side. 2 large tugs put up 2 lines each forward and after end of main deck. 1 smaller tug puts up 1 line starboard side main deck aft and a fourth tug pushes. Moorings were 2 back springs, then 3 breasts, then 3 head/stern lines. Original I-418 (Crew List) to Immigration and 3 copies for Agent. 1 each of Customs Forms 1300, 1301, 1302 and 1303. The minimum draft requirements apply to departure and arrival.

AUTHORITY: Hess Oil Virgin Islands Corp.

Virgin Islands Port Authority, P.O.Box 1707, St. Thomas, Virgin Islands, U.S.A. 00801. *Tel:* (809) 774-1629 (St. Thomas), (809) 778-3131 (St. Croix). *Contact:* Jean Bozzuto (St. Thomas), Larry Finch (St. Croix).

ROAD HARBOUR & PORT PURCELL, Tortola, British Virgin Islands: 18.25 N. 64.37 W.

PORT LIMITS: All the area of water North of an imaginary line drawn from Burt Point to Hog Point (see BA Chart 2020).

DOCUMENTS:

Clearance from last port;
1 Declaration of Health Certificate;
4 Crew Lists;
2 Crew Store Lists;
2 Ship's Stores Lists;
2 Passenger Lists.

PILOTAGE: Only compulsory for vessels of 200 g.r.t. and over, unless a vessel is in possession of a valid Exemption Certificate issued by the Ports Manager. Pilot boards at Port limits after receiving advice from Agents preferably 12 hours prior to arrival. Link calls made through Tortola Radio, Channel 27 daytime and Channel 16 at night.

Vessels arriving ahead of ETA sound "G" on whistle if unable to advise Agent.

No inward pilotage at night, unless emergency, night Pilotage outwards by special arrangement.

ANCHORAGES: Between Buck Island and Beef Island or immediately South of Port limits, approximately 12 fathoms.

RESTRICTIONS: Anchorage within Port limits prohibited unless authorised by Ports Manager. Max. draft alongside Port Purcell 21 ft.

HEALTH: Customs issue Pratique for vessels with clear bill of health, otherwise request doctor to board on arrival alongside or at anchor.

RADIO: Call sign "Port Purcell" – can be reached by VHF Channel 16. Cable and Wireless maintain a Public Coast Station on Tortola, call sign "Tortola Radio", with an approximate range of 50 miles and provides linked telephone calls between ships and any shore based telephone subscriber. From 0700 – 1900 hrs. watch is kept on Channel 16, at night for emergencies only.

For distances in excess of 50 miles any other convenient shore station, (eg. Barbados, St. Thomas) that will accept messages for onward cabling or telephoning to Tortola.

TUGS: None available.

BERTHING: Port Purcell quay is 800 ft. long, max. draft 21 ft. at any state of tide, salt water. Ships discharge with own gear.

CRANES: Port Purcell has 1 mobile shore crane, max. lift 8 tons. Prior advice required for use.

MEDICAL: Hospital facilities available, no routine inoculations, etc., required unless specially notified.

DENSITY: Entirely salt water within port limits.

FRESH WATER: Available in limited quantities at Port Purcell, approx. delivery 20 t.p.h. and costs US$14.00 per 1,000 gallons.

FUEL: Diesel only for small vessels delivered by road tanker to Port Purcell, 2 hours' notice.

REPAIRS: Minor repairs only.

SURVEYORS: Available.

HATCHES: Opened and closed by crew.

CUSTOMS ALLOWANCES: No sealing of tobacco, wine or spirits.

AIRPORT: Beef Island, 7 miles, regular local flights to St. Thomas, Puerto Rico, Antigua which connect with several main lines to Europe and the Americas.

TIME: GMT minus 4 hours.

HOLIDAYS: Port Purcell closed Christmas Day, Good Friday and August Monday (1st in month).

POLICE/AMBULANCE/FIRE: Dial 999 (emergency). Police station 43422.

TELEPHONES: Telephones available for use on board ship, cost for connecting US $25.00 and 8 cents for local calls.

SHORE LEAVE: No restrictions for crews.

IDENTIFICATION CARDS: None required.

DELAYS: None should be expected. Cargo working is geared to ship's arrival, irrespective of time and 24 hours continuous working if required.

AUTHORITY: Ports Manager and Harbour Master, Road Town, Tortola, Virgin Islands.

ST. THOMAS: 18.20 N. 64.56 W. (See Plan)

Harbour of St. Thomas, U.S.V.I. situated on South side of Island of St. Thomas. It is 1,434 miles from port of New York. Northern side of Island borders on Atlantic Ocean, and Southern side on Caribbean Sea. The Harbour is one of the best in the West Indies, being almost landlocked.

WEATHER: The weather is usually mild with little wind. Squalls when they occur, usually come from the N.E.

DOCUMENTS: *Quarantine, Customs and Immigration* see "Frederiksted".

Agent:

1 Copy Crew List (Form I-418).
1 Copy Passenger List (Form I-418).

PILOTAGE: Compulsory and available day and night. Pilot Boat has letter "P" on deck house and flies International Code flag "P". Pilots will meet vessels 1 to 3 miles outside harbour, boarding via Jacob's ladder.

ANCHORAGE: Outer Harbour Anchorage located beginning at Scorpion Rock Lighted Buoy No. 1 (Lat. 18° 19′ 25.6″ N., Long. 64° 55′ 08″ W.) thence 180°, 1,580 yards; thence 263°, 2,490 yards; thence due North 1,255 yards; thence due East to the Southerly tip of Sprat Point, Water Island; thence to Cowell Point, Hassel Island, and thence to point of beginning. This anchorage is considered good and is about 8 fathoms with sand bottom.

RADIO: The St. Thomas Marine Operator will guard the following from 0600 to 2100 hrs.: Channel 26, 16 VHF, 2009 – 2506 and 2182 kHz AM, and the upper side band (2010.4 – 2507.4 kHz) of the same frequency. The Harbour Master's Office maintain a 24 hour watch on VHF Channel 16 (working on Channel 12).

(b) Master of every vessel arriving at St. Thomas is required to give at least 24 hours advance notice of arrival to Captain of the Port U.S. Coast Guard – San Juan, Puerto Rico by wireless on 500 kHz or by radio telephone 2182 kHz.

(c) Masters are requested to advise Agents their ETA, at least 36 hours in advance. Arrival messages should include cash requirements (local currency U.S. Dollar) and advice regarding repairs, stores, etc. This information is particularly necessary in the cases of vessel arriving on weekends or holidays. For cruise vessels the arrival messages should also include the number of passengers and crew on board.

(d) While vessels are in St. Thomas Harbour, the Authorities do not permit the use of the ship's radio transmitters.

(e) U.S. Coast Guards: This organisation maintains a small Marine Safety Detachment in St. Thomas to observe, service and effect repairs to navigation aids in vicinity of St. Thomas. An 82 ft. Coast Guard Patrol Boat "Point Whitehorn" (82364) is attached to the station for primary purpose of search and rescue work. Maintains watch on VHF Channel 16. Radio telephone marine information broadcasts, including Notices to Mariners, will be made on 2670 kHz, after first making a preliminary announcement on 2182 kHz. Radio telephone urgent and safety broadcasts or Marine Information will continue to be made on 2182 kHz.

TUGS: Normally not considered necessary for docking, however tugs are available for docking and undocking ships.

BERTHING: Wharf of the West Indian Company Limited, located on Eastern shore of harbour basin. Wharf is bulkhead type, 2,234 ft. long, running N.E./S.W., and is well protected to seaward. Mooring bitts are spaced at intervals of 50 ft. There is a "cut out" in the wharf 950 ft. from N.E. corner, which is 22 ft. wide and approximately 3.5 ft. above low water. This ramp is slanting from 8.3 ft. to 3.5 ft. over a distance of 20 ft. Similar type of ramp located on West Corner of wharf. Safe depth alongside from 27 ft. near N.E. end to 30 ft. on S.W. end. Bulwark is 8.3 ft. above mean tide. Average difference between high and low tide is 11 in.

Dockage dues are payable to the West Indian Company Limited, as per tariff.

In the Crown Bay area (access via East or West Gregerie Channels) the V.I. Port Authority maintains facilities which include a pier extending 800 ft. from shore with 500 ft. of berthing space on South side and 200 ft. on North side, where ships up to 25,000 g.r.t. can moor. Controlling depth presently 38 ft. This pier is used for berthing tourist and tanker vessels only. A curved bulkhead at top of Crown Bay, approximately 900 ft. long, is used for Ro/Ro, container and break bulk cargo. Controlling depth

15 ft. 24-hour arrival notice is required.

CARGO HANDLING: Containers are handled at the West Indian Company and the Crown Bay area (V.I. Port Authority), but no special gantry cranes are available. Ro/Ro cargo handled at these facilities as well. No liquid chemicals facilities exist here but there is a small privately-owned LPG plant limited to 20 ft. draft and 250 ft. length. Shell uses this facility for gasoline and light diesel. The "T"-pier in Crown Bay is used for the V.I. Water and Power Authority for movement of fuel and water, and Texaco has its own pipe-line on the same pier for their products.

STEVEDORES: Discharging and/or loading arranged by the West Indian Company Limited for account and risk of vessels.

Rates of discharging and/or loading dependent on vessel's equipment and stowage. However, following may be considered average:

General Cargo 6 weight tons per gang hour.
Bagged Goods 8/10 weight tons per gang hour.
Lumber 10/12 weight tons per gang hour.

Each stevedore gang normally consists of 12 stevedores (10 on board and 2 ashore), 2 winchmen, 1 signalman, 1 foreman.

FUEL: Bunkers are not available except for small craft.

FRESH WATER: Mostly rain water which when available is supplied by the West Indian Company Limited. This supply is limited and is on an emergency basis only. Water may also be requested from the Government of the Virgin Islands in cases of emergency only. Delivery effected by pipe alongside wharf. Water by barge can be delivered in St. Thomas.

MEDICAL: Local hospital is the Knud-Hansen Memorial Hospital, which is equipped with facilities for operations, etc.

TIME: Official St. Thomas time is Atlantic Standard Time, which is 4 hours behind GMT.

HOLIDAYS: The following are legal holidays in St. Thomas: Sundays; January 1st (New Year's Day); January 15th (Martin Luther King); January 30th (Roosevelt's Birthday); February 12th (Lincoln's Birthday); The third Monday in February (Washington's Birthday); March 31st (Transfer Day); Holy Thursday; Good Friday; Easter Monday; Whit Monday; The last Monday in May (Memorial Day); June 22nd (Organic Act Day); July 4th (Independence Day); July 25th (Supplication Day); The first Monday in September (Labour Day); The second Monday in October (Columbus Day); The fourth Monday in October (Veterans' Day); November 1st (Liberty Day); The fourth Thursday in November (Thanksgiving Day); December 25th (Christmas Day); December 26th (Christmas Second Day), and such other days as the President of the Government may by proclamation declare as holidays.

Whenever any holiday falls upon Sunday, the Monday following is a legal holiday.

REGULATIONS: The U.S. Coast Guard strictly enforces the Harbour Pollution Act of 1924, prohibiting discharge of refuse and oil in navigable waters of the U.S. Virgin Islands.

Local Port Regulations are similar to those applying in U.S. Mainland Ports.

HEALTH, CUSTOMS, IMMIGRATION: Refer to Frederiksted.

CONSULS: Following countries have consular representatives in St. Thomas.

Belgium
Denmark
Dominican Republic
El Salvador
France
Haiti
Netherlands
Norway
Panama
Sweden
United Kingdom

AIRPORT: Distance 2 miles. Connections with International flights from Puerto Rico and direct flights from New York and Miami.

GENERAL: *Gangway:* One aluminium gangway available which is 34 ft. long and 2 ft. 6 in. wide – made with skidding prevention strips only and therefore not recommended for use as a passenger gangway. There is a similar gangway that is owned and used on V.I. Port Authority facilities. Since these are the only gangways; they are made available to vessels on first-come-first-served basis.

Stores: St. Thomas should not be depended upon for large quantities of provisions or deck and engine stores, as practically all commodities are imported making prices higher than United States mainland ports and Puerto Rico. No regular Ship's Chandlers established in St. Thomas, V.I.

Storage Facilities: The West Indian Company Limited undertakes ordinary storage for a limited period of time in 8 transit warehouses, all 14 ft. high with a total floor area of 80,000 sq. ft., plus an additional 9,600 sq. ft. roof covered area. There is also a large uncovered area available for outside storage. Only limited cold storage facilities are available on The West Indian Company's Dock.

Ice: Small quantities may be obtained.

Laundry: Modern laundry service is available.

POLICE/AMBULANCE/FIRE: Police 915; Ambulance 774-1212; Fire 921. Port Authority 774-2250, 774-2333.

AUTHORITY: Virgin Islands Port Authority, Office of the Assistant Executive Director, Marine Division, P.O.Box 36, St. Thomas, Virgin Islands, U.S.A. 00801. *Contact:* Austin M. Monsanto, Marine Manager.

NOTES

Please also advise Shipping Guides Ltd.

Western Samoa

APIA: 13.50 S. 171.45 W. (See Plan)

PORT LIMITS: The Customs Act defines the port of Apia as follows: The limits of the said port of Apia shall be a circle of 2 miles radius from the Custom House now existing in Apia and the said port shall include all land, river, and sea included within that circle. The Shipping Act defines the limits of the port in similar terms using the Export Wharf as the centre of the 2 mile radius circle. Both of these features are shown on Chart 2211.

DOCUMENTS:
1 Clearance from previous port of call.
3 Crew Lists.
3 Passenger Lists.
2 Health Documents.
1 Manifest.
Bills of Lading.
Ship's Papers (stores and poisons).
List of Dangerous Goods.

PILOTAGE: 72 hours ETA is required, confirm 24 hours before arrival. Pilotage is compulsory for merchant vessels. Pilot boards 1.5 miles outside harbour on line of leading beacons. Pilot boards from harbour tug.

By night, in addition to usual navigation lights, Pilot boat carries standard identification, i.e. a red light on foremast with all-round visibility. Exemption from pilotage may be granted to Masters of vessels trading regularly to Apia, but pilotage dues are still payable.

ANCHORAGES: In 20 fathoms outside a line drawn between the 2 reefs and preferably on line of leading beacons. Bottom is coral.

RESTRICTIONS: No night-time or tide restrictions. Turning basin dredged to 36 ft. in 1972, extending to 1,200 ft. from each end of the wharf. Arrivals preferred during daylight hours.

MAX. SIZE: Shore bollards to take stern and bow lines for vessels up to 800 ft. in length. Max. draft 35 ft.

Buoy mooring for tankers up to 32,000 d.w.t. consists of 3 buoys with black and red vertical stripes, 1 ahead and 2 astern. Vessel also uses starboard anchor.

HEALTH: Doctor boards vessel on arrival alongside.

RADIO: ETAs should be sent 72 hours before arrival, and confirmed 24 hours before. Signals to incoming ships by radio or radio-telephone from Apia radio station 5WA. For radio, ships should call on 500 kHz and operate on 483 kHz. For radio-telephone, ships should call on 2182 and operate on 2162 or other available frequency as may be arranged once contact has been established. Apia maintains continuous service. Call sign "Apia Radio" repeated.

Apia Radio maintains continuous service, and the Harbour Master can be called on Channel 16 during normal working hours. The tug and pilot launch also operate on Channel 16 .

TUGS: 2 tugs available, *Pualale,* 425 b.h.p. (7 ton pull) and *Savaii,* 175 b.h.p.

BERTHING: Export Wharf – reinforced concrete wharf 604 ft. in length on the East side of inner harbour. Max. depth alongside 36 ft. All loading and discharging is carried out with ship's gear. No wharf cranes available. This wharf and all surrounding areas enclosed by fence is Customs area and all vessels trading to or from places outside Western Samoa must depart from or arrive at this wharf.

New wharf 604 ft. long, vessels up to 800 ft. may be berthed.

There is 250 ft. of berthing alongside the inner face of the Southern arm of the wharf for small ships in deep water.

There are no special Ro/Ro facilities.

Shore equipment: One 15 ton mobile crane. Two×20 ton forklifts. About 10×3 to 5 ton forklifts.

STEVEDORES: Arranged by ship's Agents.

MEDICAL: Advance notice to Agents preferable. Doctors and good general hospital where seamen may be admitted.

There is a private medical clinic and a private dental clinic. Both high standard.

TANKERS: Shell, Mobil, and B.P. operating in Samoa, and have own discharging facilities. Tanker terminal situated on West Reef. Discharge line is 6 in. diameter. Launch service may be provided between ship and shore at a small charge.

DENSITY: 1025 – but may alter considerably during rainy season.

TIDES: Mean high water intervals 6 hours 27 minutes, Spring range 3.8 ft., mean range 2.6 ft. Tidal stream normally slight, but after heavy rain outflow from rivers and streams can cause it to become quite strong.

The current across the harbour entrance about 600 m. off the reef can be variable, but is predominantly Westerly and velocities up to 4 knots have been reported but this is not normal.

FRESH WATER: Available at wharf from shore installation.

FUEL: Only light diesel fuel available.

FIRE PRECAUTIONS: Fire services available on wharf, station is 0.5 miles distant.

GANGWAY/DECK WATCHMEN: Recommended and available.

OPENING/CLOSING HATCHES: Opened and closed by stevedores.

CUSTOMS ALLOWANCES: No enforcements.

IDENTIFICATION CARDS: Not needed.

CONSULS: The New Zealand High Commissioner represents all British subjects; French Consul, Australian High Commissioner, Embassy of the Chinese People's Republic, South Korean Consul, West German Consul, United States of America Consul.

REPAIRS: Minor repairs only.

SURVEYORS: None.

AIRPORT: 25 miles from Apia on Western side of Island. Regular and frequent mail and passenger services. Direct to Auckland or USA via American Samoa.

TIME: GMT minus 11 hours. No alteration to clocks.

HOLIDAYS: No cargo on Sundays between 0300 and 2100 hrs. The recognised holidays are Christmas, New Year, Boxing Day, Good Friday, Easter Monday, Whit Monday, Anzac Day and Independence holidays from 1st June to 3rd June.

TELEPHONES: Police and public telephones near wharf and provisions are available for telephone connection to tourist vessels berthed at the wharf.

POLICE/AMBULANCE/FIRE: Hospital 21.212; Police 22.222; Fire 999 emergency or 20.404.

EMERGENCY CO-ORDINATION CENTRE: U.S Coast Guard, Pago Pago, American Samoa, 80 miles East of Western Samoa.

SHORE LEAVE: No restrictions.

BANKS: Bank of Western Samoa, P.O.Box 189, Apia, Western Samoa. Tel: 22 422. Telex: 258.

Pacific Commercial Bank (Affiliate Bank of New South Wales and Hawaii), P.O.Box 192, Apia, Western Samoa. Tel: 22 781. Telex: PCB 231.

STORING: See "Prelims".
1. Truck only.
2. N/A.
3. Yes.
4. Yes.
5. No regulations.
6. Yes.

SHIP SUPPLY SERVICE: The Marine & Shipping Division of the Ministry of Transport provides tug-boat services which are available for ship-to-shore transport of personnel and/or essential ship stores, sick crew members, etc., on application to the Secretary, Ministry of Transport.

GENERAL: *Supplies:* Provisions available. Deck and engine room supplies can be obtained in limited quantities.

Divers: No divers other than scuba divers are available, and skin divers may be recruited for up to 50 ft. diving.

Oil Pollution: The pumping of bilges, etc., within harbour limits is not permitted and *heavy penalties will be imposed for any breach.*

Garbage Disposal: The dumping of refuse of any kind within harbour limits is strictly prohibited. Properly covered receptacles will be made available and rubbish disposal vans will clear them as necessary. A small charge will be made for this service.

Charts: BA 1730 – Samoa or Navigation Islands.
BA 1339 – Plans in Samoa.
BA 2211 – Apia Harbour.

AUTHORITY: Government of Western Samoa, Ministry of Transport, P.O.Box 1607, Apia, Western Samoa. *Tel:* 23 700, 23 701 and 23 702. *VHF:* Channel 16. *Telex:* 21 Malo Sx. *Cables:* Mot Sam Govt. *Contact:* The Secretary, Ministry of Transport. Peter Smith, Assistant Secretary Marine and Shipping, and Acting Harbour Master.

NOTES

Yemen Arab Republic

GENERAL:

CIRCULAR: Extract from the Circular dated 21st June, 1975 from the Hodeidah Port General Corporation, Hodeidah, Y.A.R.

Information and General Condition:

1. *Payment of Tolls and Dues:*

All charges imposed herein are payable in cash, in advance except in the circumstances in which the General Manager of the Hodeidah Port General Corporation exceptionally agrees otherwise.

2. *Definition to Certain Terms:*

(a) "Vessels" shall deem to refer in the Regulations to every floating craft made to sail on water by its or without its own means, whether or not fit for navigation.

(b) "Working Day": Commences at 0600 hrs. and ends at 1800 hrs. Night: Commences 1800 hrs. ends 0600 hrs. following day. Weekend: Commences Thursday 1200 hrs. and ends Saturday 0600 hrs.

3. *Public Holidays:*

The following occasions are observed as Public Holidays, which commence from 1200 hrs. on the preceding day and end at 0600 hrs. following the holiday:–

1. Weekly Holiday: Friday.
2. Al-Hijra (Moslem New Year): *1st Muharram.
3. Maulid-El-Nabi (Prophet's Birthday): *12th Rabia Awal.
4. Al-Meiraj (Prophet's Ascension Night): *27th Rajab.
5. Al-Shaabania: *15th Shaaban.
6. Idd-El-Fitr (4 days): *1st to 4th Shawal.
7. Idd-El-Adha (5 days): *9th to 13th Dulhijja.
8. Revolution Anniversary: 26th September.
9. 13th June (National Holiday).
10. Labour Day (1st May).
11. Revolution Day (14th October).

*N.B.: For Hijra Calendar dates, the corresponding Georgian Calendar dates will be those proclaimed by the Government of the Yemen Arab Republic.

CIRCULAR: To Owners/Masters.

We quote below text of a circular dated 21st January, 1979, issued by the General Corporation for Ports and Marine Affairs, Hodeidah, for your information and necessary compliance:

"No vessel, having no workable derricks or winches of her own, shall be received or accepted.

Agents shall be responsible for said obligations and without any liability to the Port General Corporation, in all Yemen Ports.

Due to non-availability of discharging means of floating cranes at anchorage and non-guarantee of available shore cranes, advisable you ensure that all ships calling under your Agency should be fully equipped as required."

PILOTAGE: Pilotage is compulsory on all vessels irrespective of their size, on entry and departure.

FINES:

1. A minimum fine of Rials 500/– and not exceeding Rials 2,000/– for failing to hoist the flag of the Yemen Arab Republic on the highest mast of the vessel.

2. Rials 160/– for arrival at outer harbour without prior notification (at least 24 hours' prior notice is required).

3. Vessels attempting to enter the Inner Harbour without prior permit and without Pilot will bear all responsibilities against that in addition to a fine of between Rials 5,000/– and 10,000/–. This is also applicable on sailing.

4. Rials 500/– to 1,000/– for draining water onto the quays in addition to the responsibility for whatever may be caused against that.

5. Rials 500/– to 1,000/– for throwing garbage overboard.

6. Rials 500/– to 1,000/– for immobilising/repairing engines without prior permission from the Authorities.

7. In case a Pilot is called to take the vessel out but she fails to sail for reasons of her own or her Agents, the following expenses will be charged in addition to Pilotage fees:

(a) Pilot detention.
(b) Tugs' assistance.
(c) Unmooring fees.
(d) Any other expenses.

8. The Corporation also reserves the right to impose any fine considered for violating its rules and regulations.

HODEIDAH: 14.48 N. 42.55 E. (See Plan)

Also see "General" before first port.

FLAG: It is essential that from the time they enter Yemen territorial waters all vessels fly the Yemen Arab Republic flag and this should be flown continuously until they leave these waters on sailing. Failure to observe this courtesy may result in a heavy penalty. The design of the flag is red, white and black horizontal stripes of equal size with green star in centre of white stripe.

DOCUMENTS: On arrival 16 copies of Manifests of cargo for discharge are required and each must be endorsed with the word *Correct* by the *Customs Authorities* at the Port of Loading. It is imperative that at least 2 of the 16 copies of manifests on board the ship should be freighted copies, otherwise 2 additional copies, showing freight details should be airmailed to Hodeidah separately to arrive in advance of the vessel. The Master should also be in possession of 1 copy of each Bill of Lading and certificate to show vessel is not blacklisted.

PILOTAGE: Pilotage is compulsory and as the entrance of the Channel giving access to the Port cannot be observed from the port area itself it is essential that accurate ETAs be given to the Agent in order to avoid delays waiting for a Pilot.

Vessels will be piloted down a dredged channel of about 8 miles in length. The channel, which is buoyed with black starboard and red port buoys, is 7.5 m. deep and 100 m. wide.

Pilot boarding position: Lat. 14° 56′ N., Long. 42° 54′ E.

ANCHORAGE: Masters are also recommended to ensure that on arrival they anchor off the entrance to the new port to await the Pilot and do not anchor off the old port opposite the town some 5 miles to the South and which is still shown as being the Port of Hodeidah on some charts. Vessels anchoring in the wrong area may suffer some delay before they can be contacted and asked to proceed to the correct area. Masters should be advised to anchor at the outer anchorage in the following position: Lat. 14° 55′ N., Long. 42° 54′ E. Also see "Shipmaster's Report – May 1982".

RESTRICTIONS: The approach channel is dredged to 9.5 m.

MAX. SIZE: Max. draft 30 ft. Also see "Shipmaster's Report", dated May 1982.

Shipmaster's Report: January 1985.

Entrance channel is buoyed differently to that shown on B.A. Chart (See "Plan"). Pilot suggests that max. draft at LW is approximately 8.0 m., especially if there is a swell at the entrance.

HEALTH: All members of the crew must be vaccinated against yellow fever and cholera otherwise permission will not be given to disembark.

RADIO: Masters should also ensure that a radio watch is kept to receive calls from the Port Authorities. The Hodeidah Radio station is operative between 0600 and 1800 hrs. daily, the call sign is: 4WD or 4WD3 (short).

TUGS: 6 tugs, 375 h.p. – 1,800 h.p. Pilot launch 250 h.p. also available to assist.

BERTHING: The quay is 540 m. in length with 4 berths, the first 70 m. long, depth 6 m., the second, third and fourth are of 150 m. length and 8.5 m. depth. *Officially, ships berthing are restricted in length to 180 m. and to a max. draft of 26 ft.*

The quay is of concrete construction and is well founded, vessels being secured to bollards in the normal manner. Use of rat-guards is recommended. The quay is equipped with 4 electric cranes described as having a max. capacity of 5 tons. Floating crane of 75 tons capacity available.

There is also a dolphin berth for discharging of petroleum products, which is connected by submarine pipes to storage tanks near the port area. The depth alongside is 6 m.

STEVEDORES: All labour is provided by Agent's representative including winchmen and tally clerks, but winchmen are provided entirely at ships' risk.

Rates of discharge vary but are quite satisfactory and with bagged cargo the average obtained is 30 tons per hatch per hour. Night work is possible.

Vessels are expected to supply food on board to cargo supervisors, foreman, and tally clerks. It may be left to Master's discretion whether this is supplied, but if not the Agency will have to supply same and the cost will be debited to the vessels.

Working Hours: Normally from 0600 hrs. to 1100 hrs. and again from 1300 hrs. to midnight. Additional work outside these hours, including after midnight can usually be arranged if necessary, although this cannot be guaranteed. Any work after midnight is overtime.

MEDICAL: Hospitals at Hodeidah and Sanaa-Taiz.

FRESH WATER: Available; pumping rate 10 t.p.h.– 15 t.p.h.

FUEL: Small quantities of diesel oil available from Yemen Petroleum.

CONSULS: (and Embassies):

Algeria
China
Egypt
Germany D.R.
Germany F.R.
Ethiopia
France
Italy
Iraq
Korea
Kuwait
Lebanon
Libya
Saudi Arabia
Syria
U.S.S.R.
United Kingdom
U.S.A.
Yugoslavia

REPAIRS: Light repairs can be carried out.

SURVEYORS: Lloyd's Agency available.

AIRPORT: Flights to Sanaa. Also flights from the new Hodeidah International Airport.

TIME: GMT plus 3 hours.

HOLIDAYS: Friday is the weekly day of rest, Sunday being a normal working day. There are also a number of Moslem holidays. Work is usually possible on such days but cannot be guaranteed. Holidays for special occasions are also liable to be declared at short notice. Friday if worked 50% and public holidays 100% surcharge. During the Moslem fast period of Ramadhan lasting about twenty nine days, which again varies from year to year, work is slower.

Also see "General" before first port.

SHORE LEAVE: Allowed. The Master should prepare a list of persons wishing to go ashore as Agent has to issue I.D. cards.

REGULATIONS: It is strictly forbidden for crew and passengers on board to take photographs while a vessel is in the harbour approaches or secured to the jetty in harbour.

Any vessel which permits oil and/or water to be discharged into the harbour will be liable to a minimum penalty of US $500.

DEVELOPMENTS: A container Ro/Ro quay is under construction. Also see "Report" on page 1917.

REPORT: August 1979 (Updated 1986).

Hodeidah Port is situated 5 km. away from the old town, built in 1961, the population of which is about 200,000. It was built on the Red Sea Coast, S.E. of Khour Ras Alkatheeb, 4 km. away from the town of Hodeidah.

Hodeidah port is built at a location safe from storms and strong winds. The port is under the administration of the Ministry of Public Works, managed by the Hodeidah Port General Corporation. It has a direct connection with the capital city of Yemen, Sana'a, by a modern highway and another connecting the twin capital Taiz.

The official characteristics of the port are given as an external pool, 10 m. in depth, where ships can anchor. A channel, minimum 45 m. wide, about one km. long and 7.9m. to 8.3 m. deep, enters into the inner pool. Maximum draft allowed is 25 ft. at HW. Buoy markings and signals for safe entry and departure are available The dimension of the inner pool is irregular, about 500 m.×400 m. Overall depth is 7.6 m. at LLW, except for 100 m. wide strip along the 300 m. berth where the depth is 8.5 m.

The port consists of a quay for loading and discharging and one special jetty for tankers. The total length of the quay is 570 m. forming 4 berths of 120 m., 150 m., 150 m. and 150 m. respectively. The quay can receive vessels up to 180 m. in length with a draft of 25 ft. at HW. The quay is equipped with 4 electric shore cranes of 5 tons maximum lifting capacity each and two mobile cranes each of 30 tons capacity.

Discharging speed for bagged cargo is between 250 tons and 300 tons per hatch per day. For general cargo the discharging speed is about 150 tons per hatch per day.

At present, there are 21,660 sq.m. of cargo storage floor space:

Shed No. 1	45 m.×60 m.	2,700 sq.m.
2	96 m.×60 m.	5,760 sq.m.
3	50 m.×60 m.	3,000 sq.m.
4	50 m.×60 m.	3,000 sq.m.
5	25 m.×60 m.	1,500 sq.m.
6	45 m.×60 m.	2,700 sq.m.
7	50 m.×60 m.	3,000 sq.m.

and several open storage yards for heavy machinery and equipment. There are fuel tanks with a storage capacity of 16,000 cu.m. connected to the oil jetty by means of a pipe-line system. A wireless station for communications, from ship to shore and vice versa, is also available.

Future Development: The development of Hodeidah Port includes:

1. Dredging:
   a. Deepening of the approach channel to 9.0 m. below MLW (Mean Low Water) with the provisions of a passing bay and deepening of the port basin to 9.0 m. below MLW. (Completed 1980).
   b. Deepening to a depth of 9.5 m. MLW alongside Berth No. 2 and No. 6 (completed).
   c. An area to the West of Berth No. 1 to a depth of 4.0 m. MLW.
   d. Reclamation of land to construct Berth No. 6.

At the end of 1980 Hodeidah port will have:

Berth No. 1, length 110 m., dredged to 8.0 m.
Berth No. 2, length 150 m., dredged to 9.5 m.
Berth No. 3, length 150 m., dredged to 9.5 m.
Berth No. 4, length 166 m., dredged to 10.0 m.
Berth No. 5, length 195 m., dredged to 10.0 m.
Berth No. 6, length 195 m., dredged to 10.0 m.
Oil berth for 15,000 d.w.t tankers dredged to 10 m.

2. Berth No. 6: 195 m. long berth with a 40 m. wide apron. (Completed 1982). Berth No. 6 is designed for container ships of: 22,500 d.w.t., length 204.0 m., breadth 31.0 m., draft 9.2 m., container capacity 1,522 units.

One container crane of 30.5 tons capacity will be installed on Berth No. 6 and will be able to load and unload between 30/40 containers per hour.

3. Slipway (completed 1981): 500 ton slipway next to the mechanical workshop. Slipway able to handle vessels 32 m. in length, 10 m. wide and 3.2 m. draft.

4. Paved Storage Areas (completed/available 1981): The concrete paving of open storage areas behind the 40 m. wide apron has approximately 80,000 sq. m.

5. Buildings and Other Services (completed/available 1981): Construction of service buildings include offices of the Port Corporation, Customs, Labour, First-aid with canteens, wash places and toilets.

6. Oil Terminal (completed/available 1981): 2 new breasting dolphins and 2 mooring buoys for handling tankers up to 15,000 d.w.t.

7. Floating Craft (completed/available 1981): A new 75 ton self-propelled floating crane has been provided.

8. Cargo Handling Equipment (completed/available 1981): 4 high level boom cranes, 1 port type mobile crane, 10 forklifts, 10 tonne trailers with tractors, 3 Ro/Ro tractors with goosenecks and Ro/Ro trailers.

9. Grain Silo Complex: The project under construction in Hodeidah port consists of a 20,000 ton Silo and a 14 stall bagging plant which has a bagging capacity of 200 per hour. The whole installation has a through put of 160,000 tons per year.

10. Water Mains (completed 1982): Extended to Berth No. 6 and fire mains will be from sea water and maintained with a 70 m. head by hydraulic accumulator.

Special Uses:

Berth No. 4 – grain unloading (40% berth occupancy).

Berth No. 6 – containers (with 30.5 ton container crane).

Container capacity will exceed 300,000 tons per year but will depend on the capability to empty containers and create an equivalent to that of the shipping.

Cargo must be carried by ships with a draft less than 9.2 m.

Arrival at Hodeidah/Ras Alkatheeb Ports:

Vessels arriving at Hodeidah Roads should anchor in the following positions inside Buoy No. 2.

Lat. 14° 55′ 58″ N., Long. 42° 53′ 53″ E.

Masters should radio or cable Agent the following information at least 24 hours in advance:

(i) Exact ETA.
(ii) Draft – fore and aft.
(iii) Quantity of cargo on board and distribution.
(iv) GRT, NRT and LOA (When vessel is calling for the first time).

Through Hodeidah Radio Station, Calling Sign: 4WD 500 kHz. (Frequency from 0500 hrs. up to 1700 hrs. GMT). 72 and 48 hours prior notice of arrival can also be given through Aden Radio.

Pilotage on entry and departure is compulsory. Normally, no pilotage is allowed after 1630 hrs., or before 0600 hrs. Hence vessels arriving in Hodeidah Roads after 1630 hrs. may not be piloted in until 0700 hrs. the following morning. Likewise, vessels which do not sail before 1630 hrs. may not be piloted out until 0600 hrs. the following day.

Supply of fresh water and shipchandlering is available.

Documents:

4 Copies of Cargo Manifest.
2 Copies of Freight Manifest.
1 Copy of Bill of Lading.

(These should be airmailed to Agent after departure of vessel from port of loading.)

11 Copies of Cargo Manifest.
1 Copy of Freight Manifest.

(To be handed over to Agent by Master on arrival of vessel.)

Port Formalities:

1. Doctor.
2. Immigration.
3. Customs.

FOLLOWING TO BE STRONGLY OBSERVED BY ALL MASTER/CREWS OF VESSELS CALLING AT HODEIDAH:

1. Sale of wines and spirits prohibited.
2. Discharging water onto quay and dismantling ships' engines at berth not allowed.

In addition to above, Masters/Crews should be advised to take serious note of all prohibitions stipulated in the Port Tariff, see "General" before first port – "Fines".

SHIPMASTER'S REPORT: May 1982.

I came in and berthed at No. 6 Berth at 8.5 m. draft and discharged via vacuvators direct into lorries and managing a rate of 3,000 t.p.d. Pilot reckoned 29 ft. maximum can be taken in.

Other points in "Guide" seem accurate, but with the chart BA 3050 being too small I cannot see many Masters bringing a large ship into the recommended anchorage position. I anchored 3 cables N.N.E. of the No. 2 Buoy in better water.

PURSER'S REPORT: August 1982.

Requirements:

1 Maritime Declaration of Health. (Any country's (preferably Arab) is accepted suitably amended).
1 Vaccination List (ship's form).
10 Crew Lists (ship's form).
2 Bonded Stores Lists (ship's form).
1 Crew Effects List (ship's form).

Sundry Customs and Agent's forms were brought aboard on arrival. These required the usual information regarding draft, fuel, water, and tonnages, etc.

Customs and Port Authorities were very particular that cargo tonnages were accurate as per manifest when completing forms.

Customs sealed both bond and beer rooms, but placed no restriction on quantities in bars and cabins with the proviso that alcohol was not sold or given to locals. An additional quantity of bonded items was allowed to be removed before sailing.

Courtesy Ensign: Supplied in the U.S.A. and not marked to show which was top. It should be flown with the red stripe uppermost.

Mail: The Agent advised that mail both in and out of the country was slow and unreliable.

Laundry and Chandlery: Both services available but not used.

Navigation: The Master advises that navigational marks could well change due to berth extensions and port improvements. A container crane is at present under construction.

SHIPMASTER'S REPORT: April 1984.

Pilotage: Ships can enter or sail out of harbour at anytime, if Agent makes strong request. All the buoys in the channel as well as the approaches including the Sea Buoy are lit.

Berthing: Observed a ship entering with 30 ft. draft and Pilot confirmed that vessels can enter up to 30 ft. draft.

Stevedores: Bagged cargo discharging rate increased to up to 30 t.p.h. provided that receivers are able to supply sufficient trucks in time.

The stevedores no longer request drinking water from the ship, as they drink bottled water supplied from shore.

AUTHORITY: Ports and Marine Affairs Corporation, P.O.Box 3183, Hodeidah, Yemen Arab Republic. *Telex:* 5565 Mawani Ye. *Contact:* Captain Ali H. Elhabory, Chairman, Captain Ali H. Sharaf, Director-General, Captain Abdullah A. Rajab, Harbour Master.

AGENT: The Hodeidah Shipping & Transport Co. Ltd., P.O.Box 3337, Hodeidah, Yemen Arab Republic. Tel: 2403/4/5. Cables: "Hodship". Telex: 5510 (Hodeidah) and 2218 (Sana'a). Answerback: "Hodship". Branches at Mocha, Saleef, Taiz and Sana'a.

MOCKA: 13.17 N. 43.10 E.

Mocka new port opened in June 1979, with equipment for loading and unloading.

BERTHING: 150 m. of quay for vessels of up to 26 ft. draft (Depth 27 ft). Vessels may berth simultaneously. Cargo is discharged direct onto trucks or onto open area. New sheds are under construction.

TUGS: 2 available.

FUEL: Not available.

TIME: GMT plus 3 hrs.

REPORT: August 1979 (Updated 1986).

The project of constructing Mocka Port has been in execution since April 1978. The construction was completed during April 1979 and the port was officially opened to International traffic in June 1979.

Location: Mocka is connected to Hodeidah by a road of 240 km. out of which 45 km. is asphalt surfaced. Mocka is also connected to the twin capital of the Republic, Taiz, by a road of 110 km.

Jetty: The port consists of a jetty of 150 m. in length and 35 m. wide with a draft of 8.5 m. during low tide. This jetty can accommodate 2 vessels at a time, each of 150 m. length, on both sides and a Ro/Ro vessel at the head. A protecting jetty for breakwaters is also constructed for controlling the force of strong waves. It is 750 m. in length and 15 m. wide with various depths from 5 m. to 3.5 m. This jetty is constructed for the purpose of protecting the main jetty and can receive coasters and lighters of aforesaid drafts.

Anchorage: The dimension of the manoeuvring area, for vessels securing at berth and departing from the main jetty, is 420 m. The length of the channel leading to the manoeuvring area is 2,000 m. with a draft of 28 ft. 5 in. during low tide, whereas the draft during high tide is about 30 ft. Vessels calling at Mocka should anchor at the following position: Lat. 13° 20′ 01″ N., Long. 43° 13′ 02″ E.

Storage of Cargo: The reclaimed area for storage of discharged goods consists of 300,000 sq.m. 4 storage sheds (60 m.×50 m.).

Future Developments: There are plans for building other jetties together with protecting jetties in the near future.

Bunkers: Bunkers, at present, are not available at this port. Any vessel calling at this port is required to supply fresh water for drinking purposes to all labourers during stevedoring operations.

Radio: Vessels calling at Mocka are advised to contact Agent through Hodeidah Radio Station, call sign, 4WD, 500 kHz (frequency from 0500 hrs. up to 1700 hrs. GMT), as, at present, this port is not equipped with a wireless station. It is proposed to establish one during 1979.

SHIPMASTER'S REPORT: August 1980.

Vessel: 6,000 d.w.t., 104.0 m. LOA. Discharged 2,000 tons of RBD palm oil.

Port Limits: None defined, however vessel is in port limits and 'arrived' once anchored within the anchorage marked on BA Chart 1955.

Documents: 1 copy personal effects declaration, 1 copy stores list, 1 copy inoculations and vaccinations and at least 10 copies of cargo manifests, 3 copies of crew list.

Anchorages: Vessel anchored safely in a position with the North Fort Barge 103° True −1.74 miles. Vessel's max. draft was 20 ft. and there was 30 ft. of water below the keel at 1 hour before low water. It is inadvisable to proceed further South, especially at night due to the placing of unlit channel marking buoys by the port.

Pilotage: There are presently two berths, one on either side of a finger wharf. The Pilot boards at the anchorage and brings the ship alongside one of these berths. There are 3 Pilots in Hodeidah and 1 in Mocka.

Max. Size and Restrictions: Max. permissible draft is 26 ft. salt water and max. LOA permissible is 500 ft.

Radio: None. The port operates VHF on Channels 16 and 14. There are no fixed hours and the port radio is in operation only when the port wishes to communicate with the vessels.

Radar: None.

Tugs: 2 tugs assist vessels for berthing and unberthing. We were assisted by the 'Markaron' (2,000 h.p.).

Cranes: None. There are mobile cranes available with the prior arrangements of the ship's Agents. Otherwise ship's gear is mainly used.

Stevedores: None in the strictest sense. Labour is recruited by the Agents and made available on board.

Tankers: There is no facility for discharging petroleum cargo.

Density: 1025.

Fresh Water: Not available.

Fuel: Not available.

Fire Precautions: None.

Consuls: None.

Repairs: Not available.

Dry Docks: None.

Surveyors: None.

Watchmen: None.

Customs Allowances: Bonded stores are not sealed. Master is verbally informed not to make any issue from the bonded stores without the Customs permission. All officers and crew who declared their quota were allowed to keep same.

Repatriation: Possible, but local Agent has no knowledge of how to effect it.

Airport: None.

Time: GMT plus 3 hours.

Shore Leave: Allowed. The town is situated about 4 km. from the jetty. There is no entertainment that seamen can find in this town and it is not advisable to be ashore after dusk.

ID Cards: None are issued but ship's personnel going ashore have to carry their seaman's book or passport.

AUTHORITY: Ports and Marine Affairs Corporation, Hodeidah, Yemen Arab Republic. *Contact:* Abdelkader Abyadh, Manager of Mocka Port.

AGENT: See "Hodeidah".

RAS ALKATHEEB: 14.55 N. 42.53 E.

The Port of Ras Alkatheeb is situated 14 km. from the main city of Hodeidah and connected by a gravel road which is in the process of being resurfaced and broadened with two traffic lanes on the same alignment, thus providing a first class road transport link between Hodeidah and Ras Alkatheeb. Also see "Hodeidah".

BERTHING: The port has a berth 270 m. in length and 27 m. wide, pontoon type, with ships berthing on either side. This port can receive vessels with a max. draft of 26 ft. at high tide. Vessels can be secured to barges and coasters with a draft of 14 ft. which can be connected to the shore, thus enabling ships to discharge directly onto waiting trucks. Said pontoon is mainly used for bagged cargo on direct delivery basis.

Presently, this port does not have shore crane facilities and all unloading is done with ship's own gear.

Storage and Delivery: Due to lack of storage facilities at this port, delivery at present, is given directly under the hook.

GENERAL: The port is not a commercial port.

SHIPMASTER'S REPORT: November 1980.

1. Port does not accept Vessel's Registration until vessel is anchored between Buoy No. 1 and No. 2. This as per the Port Radio VHF station.
2. Buoy No. 2 is placed about 6 cables N.N.W. of charted position.
3. Do not attempt entry at night since Buoys are unlit and there are many uncharted stranded wrecks visible only during daytime.
4. Tugs available: 4×700 b.h.p. and 3×1,800 b.h.p. Pilotage only during daytime.
5. Vessel berthed at Ras Khatib pontoon. Max. draft 8.0 m., total effective length of pontoon 270 m.
6. Port issues a directive to Agents giving estimated time to discharge. If not completed, port charges at the rate of 4 Rials/per metre/per hour of stay extended.
7. Distance from Ras Khatib berth to town 15 km. Only 10 to 15 shore leave passes given to vessel regardless of number of crew.
8. No chipping and scraping permitted but painting is allowed.
9. Fresh water inside port is $4/– per ton, at Ras Khatib $20/– per ton by barge.
10. Provisions available but expensive.
11. Repatriation possible but very difficult due to having to obtain permission from Saana (Capital).
12. Cargo work is fast, 260 tonnes of cement per gang per day. Normal shift 0730 – 1200 hrs. and 1500 – 2330 hrs.
13. As per "Pilot", there will be dredging carried out soon and also lighted buoys will be placed.
14. Ras Khatib light Fl. 3 sec. of very low power.
15. Yellow fever inoculation not compulsory unless coming from infected area.

SALEEF (Salif): 15.18 N. 42.41 E.

Saleef port is a natural port on the Red Sea, approximately 80 km. North of Hodeidah port. Two routes, one round the North end of Kamaran Island and the other around the South end provide suitable access to the harbour.

As prevailing winds are generally Southerly or Northerly, vessels are able to approach the berth from downwind. This is important as vessels will probably have to berth without tug asistance. Initially, mooring facilities are designed for 50,000 d.w.t. vessels and consists of a wharf head 20 m. wide, 93 m. long with two dolphins. A 10 m. wide trestle connects the wharf head to the shore. Facilities are designed to absorb the berthing impact of a ship approaching with a velocity component of 15 cm. per second perpendicular to the berth face and for a 50 tons mooring line pull.

Future developments: A French consulting firm has been awarded the contract to submit a report on future developments of this port.

SHIPMASTER'S REPORT: December 1979.

Acknowledgements: Most of the information has been gleaned from local Agency representatives and Capt. A. Saeed, Harbour Master.

Reference has been made to Red Sea Pilot and various BA Charts. Local written information is unavailable for the area concerned.

General: Salif lies some 60 km. North of Hodeidah, it is a natural deepwater harbour sheltered by Kamaran Island.

Since 1976 the port has enjoyed moderate expansion and can now boast a modern jetty capable of berthing ocean going vessels; other pontoon type berths are available, these being linked to the shore by small stone jetties. At present the port can accommodate two vessels of up to 200 m. length with a draft of 12 m.

Salif is geared for the export of bulk salt and the import of grain and some general cargo. In the near future a further pontoon type berth is due to come into operation to be used solely for the import of bulk cement. A bagging plant and silo have been constructed to handle the additional cargo.

This report is mainly directed to the facilities associated with the import of grain, however where possible relevant information has been included which could prove useful to other vessels trading in the area.

Documents:

6 Crew Lists with passport numbers.
2 Bonded Stores Lists.
2 Personal Manifests.
2 Vaccination Lists.
3 Copies Cargo Manifest.
Local inward forms made out on arrival.

Approaches: (BA Charts: 543 and 548). Recommend approaching around the North end of Kamaran Island, as mentioned in Red Sea and Gulf of Aden Pilot, page 390.

The lighthouses stand out well, but at night they are not lit (December 1979). The only difficulty in making Salif, in daylight, is passing to the South of N.W. shoal light, the channel at this point being about one mile wide. At night the lighthouses prove quite good radar targets, and the various islands etc. show up quite well. Once around the top of Kamaran Island course can be set down Kamaran Passage to the anchorage area off Ras el Salif. Charterers frequently advise that passage is possible South of Kamaran Island, however this is not advisable; the leads mentioned on the chart are very difficult to see and there is no room for error.

Anchorage: No specific area designated but anywhere in the vicinity of Salif Jetty. For vessels waiting for the wheat berth it is best to anchor about 0.75 miles West of Ras el Salif. Good holding ground in about 14 fathoms of water. For vessels with poor radar it would be best to anchor outside Kamaran Island until daylight, when passage can be made in safety.

Weather: See "Red Sea Pilot" for information. At Salif the wind usually picks up during the day and this can delay berthing if the strength is above Force 4.

Pilotage: Pilot boards in anchorage area from medium sized launch. Yemenese Pilot with limited English.

Daylight pilotage only.

Berthing: Vessels berth, at the bagging plant pontoon, head to wind. The pontoon consists of a flat topped barge made fast to a small stone jetty; it is well fendered with car tyres. The offshore anchor is used whilst coming alongside and a launch runs various ropes ashore to posts set on the land. Five ropes are required either end and it is necessary to join the first few together as considerable lengths are initially run. The bagging pontoon can only accommodate one vessel at a time. See "Shipmaster's Report – May 1982".

The general cargo and salt exporting jetty lies some distance to the South of the bagging plant. This pier can take one vessel of up to 200 m. in length. Facilities at this berth are an improvement over the pontoon, however for the import of grain type cargoes, it is not so efficient, it being necessary to bag the cargo by hand. Both berths can take vessels with up to 39 ft. draft.

Buoys are at present being laid to the North of the bagging pontoon and these could prove an obstacle for vessels berthing. The moorings are being laid to assist vessels making fast to the new cement pontoon (see "Projects").

Quarantine/Health Regulations: Doctor boards on arrival, either at anchorage or alongside. No health forms as such. Certificates not required unless vessel from infected area when Yellow Fever and Cholera certificates are needed. No derat facilities.

Customs: Usual Islamic laws in force. Bond not sealed and apparently no objection for crew to consume spirits/beer on board. On no account must alcohol be given/sold to local Yemenese.

Immigration: Passports are inspected on arrival. (Harbour Master acts as translator for Immigration Authorities.) Shore leave granted with passes for Salif area only. Special permission has to be given to proceed outside local area, i.e. Hodeidah.

For crew repatriation, passports are taken to Sanaa by Agent for necessary visas to be arranged.

Medical Facilities: One doctor resides in Salif, Yemenese and speaks English. He will attend the ship rather than the patient visiting him. The nearest hospital is in Hodeidah.

Port Operations (Bagging Plant): Foremen and workers are hard working. The foremen reside in caravans close to the bagging plant whilst most of the stevedores come from Salif.

The method of discharge is to load a number of diesel driven evacuators on deck and by various pipelines, these are connected to a storage hopper situated on the pontoon/barge. The hopper is connected to a small bagging plant and by means of conveyors the sacks are loaded onto road transport.

Discharge rates per 24 hours worked between 1,600 tonnes and 1,850 tonnes. Charter Party rate indicated about 750 tonnes per day. The takeaway rate from the hopper appears to be adequate with plenty of road trucks available. The grain is shipped immediately to different parts of the Yemen.

It is usual to carry sufficient bags to enable the complete discharge of the grain to go unhindered. The bags are baled and discharged onto the pontoon at regular intervals.

Ship's gear is required at each hold to sling the pipes that lead from the evacuators into the hatch. It is also required for discharging the gunnies and for loading the evacuators (1.5 tonnes). The evacuators appear reliable but spillage of diesel results during re-filling etc.

Fresh Water: Available but expensive. Supplied by road tanker at 15 tonnes a time, it is necessary to use ship's pump for pumping the water aboard. Agents require ample notice prior to supplying water.

Fuel: Heavy oil and diesel oil not available unless barged from Hodeidah.

Stores: Not readily available; fresh stores difficult to obtain.

Agency: The main Agency lies some 60 km. away by track, and the ship is attended by a runner who commutes between Hodeidah and Salif. Considerable delays result before ship's business can be completed and it is necessary for everything to be in writing; repatriation, in particular, is difficult for the organiser as well as the traveller.

Communications between Salif and Hodeidah are non-existent, a telephone line exists, but this is out of order. It is however possible to communicate directly through Portishead Radio and sometimes the only way to get messages out.

Local currency and American Dollars are obtainable from the Agents. It is difficult to obtain the money from the Agents and generally it is best to arrive with sufficient cash on board to cover any expenditure.

To arrange repatriation it is necessary to allow at least 6 days. Visas have to be obtained from Sanaa and tickets arranged. If pre-paid tickets have been sent from U.K., then they must arrive in ample time. The airport at Hodeidah has regular connections with Sanaa which in turn is linked into most air routes via Paris. Transportation from the ship to Hodeidah is by Land Rover or similar four wheel drive vehicle.

Port Regulations: Nothing in writing. The Harbour Master, Capt. Saeed, is the person to approach if anything required. Apparently Salif is designated a military zone and this is the reason no written information is available.

Gangway: The vessel only lies alongside for a distance of about 80 ft. amidships and consequently a pilot ladder is used instead of a gangway or brow. If this causes any difficulty, ship's lifeboat can be used as a ferry between gangway and shore.

Watchmen: Supplied by local Police/Army. They remain aboard during vessel's stay and keep pilferage to a minimum. They also keep close watch on any alcohol that may be obtained by local Yemenese.

Shore Leave: See "Immigration".

Garbage: No facilities for taking garbage away from the ship; best to dump waste food etc., whilst retaining cardboard boxes, and plastic containers.

Repairs: Possible to immobilise main engines, as once on the berth it is unlikely to shift. No repair facilities ashore.

Time: GMT plus 3 hours (no change).

Flag: Yemen Arab Republic Flag must be flown at all times. Red, white, black horizontal stripes with a black star in the white section.

Consuls: Situated in Hodeidah or Sanaa. Harbour Master available for Noting Protest, etc.

Tugs: None available for berthing though frequently tugs operate in the area towing barges, pontoons, etc.

VHF: Situated in port office but hours of working very flexible. The Harbour Master normally calls any vessel up shortly after anchoring.

Fire/Ambulance: None available.

Projects: A new pontoon berth, similar to the grain berth, is being constructed about 0.25 miles to the North. Silos have been erected close to the shore and are capable of storing 9,000 tonnes of finished cement. A bagging plant has also been constructed next to the silos. It is intended that cement be shipped, in bulk, and with evacuators discharged into the silos. This project is due for completion sometime in 1980.

SHIPMASTER'S REPORT: May 1982.

I was in Saleef recently with 39,127 tonnes wheat – ship 182.08 m. long. The following are changes to information in the Guide.

The barge – pontoon berth with bagging plant no longer exists and apart from cement boats all ships now berth at jetty by Salt terminal.

Minimum water I found there in 18 days' stay was 18.5 m.

Ship's gear must be used and grain is dumped on wharf and bagged in situ, being taken away by lorries. Rate erratic, between 900 t.p.d. and 2,000 t.p.d.

Vessel has to vacate berth for car carriers and salt loaders.

No shore leave permitted.

Bond is now sealed. No restrictions on what is kept out.

NOTES

Please also advise Shipping Guides Ltd.

People's Democratic Republic of Yemen

ADEN, (including Little Aden): 12.48 N. 44.54 E.

DOCUMENTS:
5 Crew Lists for Ship's Agent, Police and Immigration.
5 Passenger Lists for Ship's Agent, Police and Immigration.
2 Lists of Bonded Stores.
1 Health Form to be shown to Pilot on boarding and handed to Ship's Agent.
Manifests, Bills of Lading if landing cargo only.
Ship's Register to be sighted by Pilot.
Arrival Declaration to be filled in by Ship's Agent after arrival.
Dangerous material declaration to be handed to Pilot on boarding.

PILOTAGE: Compulsory for all vessels proceeding to and from Inner Harbour and Oil Harbour at Little Aden which exceed 200 g.r.t. To call Pilot fly International Code Flag "G" or red/white/red lights at night. Call "Harbour Control" on VHF Channel 16, or R/T 2182 kHz. 48 hours' notice of ETA with draft to Harbour Office.

Pilot boat will meet ship at the Fairway Buoy in all weathers. Pilot boat is 50 ft. launch painted red, flying Pilot flag by day or white/red lights at night. Pilot will board on lee side of ship by pilot ladder only. Vessels waiting Pilot can anchor anywhere in Outer Harbour except in a Prohibited Area of 2,000 ft. around the Fairway Buoy. All Pilots are Yemenies with foreign-going Master's certificates.

ANCHORAGES: Ample anchorage area available with in Outer Harbour depths from 18 ft. to 54 ft.
(*a*) Anywhere North of Fairway Buoy clear of Main and Little Aden Channels and clear of Prohibited Area mentioned above.
(*b*) Deep water anchorage anywhere to S.W. of Fairway Buoy clear of Little Aden Channel and Prohibited Area mentioned above.

MAX. SIZE:
Aden:
(*a*) Max. length 900 ft., breadth no restriction, depth 38 ft. at datum for vessels taking bunkers from A.B.C. (Aden Bunkering Co.).
(*b*) Vessels taking bunkers from Y.K.T.C. (Yemen-Kuwait Terminal Co.), max. length restricted to tankers of 750 ft., breadth no restriction, depth 39 ft. at datum.
(*c*) Larger vessels can be considered on application to the Port Officer. Longest vessel to enter 940 ft.

Little Aden Refinery:
Max. length 760 ft., breadth no restriction, depth 40 ft. at datum and max. deadweight 65,000 tons.

A new jetty 45 m. in length has been constructed on the North side of the oil harbour by Agip Oil Company for use by oil rig supply tugs. Vessels up to 90 m. LOA and 6.1 m. draft can berth on the jetty.

Note: In both harbours vessels manoeuvring require 2 ft. water under keel, and vessels of draft 37 ft. and above require 4 ft. water under keel.

Ballast Draft for Tankers: All tankers when manoeuvring within the port shall be ballasted properly to a mean ballast draft which shall not be less than half the Summer draft and the trim by the stern not exceeding 6 ft. These figures are the minimum for normal conditions and may be increased when conditions necessitate at the discretion of the Pilot.

HEALTH: Vessels requiring Pratique fly International Code Signals or 3 red lights at night. This signal to be exhibited until Pratique has been granted by the Pilot or Port Health Officer.

Control of quarantinable and infectious diseases is direct responsibility of Port Health Officer. All passengers from infected local areas except children under age of one year are required to have valid international certificate of vaccination or revaccination against yellow fever and cholera.

RADIO: All ships landing passengers are boarded by Assistant Port Health Officer unless Radio Pratique has been given. Pratique may be obtained by radio to Port Health Authorities no earlier than 12 hours and no later than 4 hours before arrival, in accordance with international procedure. All landing passengers medically inspected and vaccination certificates checked on board before Free Pratique granted. Ships having infectious diseases on board are also boarded; after examining the case and taking any necessary precautions the Assistant Port Health Officer grants Restricted Pratique. Ships also inspected for issuing derat exemption certificates. Deratting carried out when necessary and derat certificate issued.

Yemen Telecommunications Company: Mercury House, Ras Boradi (Tel. 22223/5).

Wireless telegraphy:

Medium wave	*GMT*	*kHz*

6 In		Dolphin & breast buoys (oil)	800	38
7 In	T	Dolphin & breast buoys (oil)	750	39

The capital letters in column two denote alternative designation of mooring buoys/dolphins.

Home Trade Quay (H.T.Q.): 800 ft. long with depth of 18 ft. Max. size of ships that can berth there are restricted to 122 m. LOA and max. draft 5.5 m.

Free zone. Initial Stage 525,420 sq. ft. open space and 162,000 sq. ft. covered space. Import and export industrial facilities. No restrictions, no taxes. Transhipment storage free for unlimited period.

STEVEDORES: ETA advice to Ship's Agents at least 48 hours before arrival.

MEDICAL: Advance notice for medical attention not normally required except for serious cases requiring doctor's attendance on board, or ambulance cases. Vaccination certificate required for landing. Hospital facilities available.

TANKERS: Tankers carrying dangerous petroleum (flash point below 73° F) and those not gas free or carrying more than 3 tons of category one cargo (explosives) cannot enter Aden Harbour during hours of darkness. They can enter Little Aden day or night. Slop (residue) discharge facilities available at Little Aden. 4 tanker berths for discharge/loading at Little Aden with max. datum depth of 40 ft.

Berthing at Oil Harbour: Functions of Oil Harbour Little Aden to receive crude oil in bulk for oil refinery and to export refined petroleum products. Vessels carrying cargo for refinery, other than oil, discharge at Inner Harbour.

Oil harbour has finger jetty and 2 T-head jetties which provide berths for 4 tankers. Tankers of up to 65,000 tons Summer deadweight with 55,000 tons of cargo can be accommodated.

Berth	*Type*	*Normal maximum length of ship in feet*	*Datum depth in in feet*
1	Dolphin & mooring dolphins	750	40
2	Dolphin & mooring dolphins	750	40
3	Dolphin & mooring dolphins	750	40
4	Dolphin & mooring dolphins	750	40

BALLAST: Notice: Port Authority require vessels arriving or saililng in ballast to have mean draft 50% of Summer draft and maximum trim of 6 ft. by stern. However, should the vessel have segregated ballast tanks then ballast condition must comply with regulation 13 of International Convention for Prevention of Pollution 1973 Protocol 1978. Total deballasting time allowed being 6 hours only. Vessels should have maximum possible ballast clean and capable of being pumped overboard. Dirty ballast and slops can be received ashore at maximum rate of 500 t.p.h.

Signed: Marine Superintendent.
Aden Refinery Company.

DENSITY: Salt water at all times.

FRESH WATER: Ample available, delivered by barge in Aden at about 50 t.p.h. Ordinary water in Little Aden supplied by pipe-line at about 40 t.p.h. and condensate at about 2 t.p.h.

FUEL:
(*a*) A.B.C. (4 berths).
Marine fuel 2500 sec., 1000 sec., 600 sec., 200 sec.
Diesel oil and gas oil.
(*b*) Yemen-Kuwait Terminal Co.
Marine fuel – all grades below 3,500 sec.
Diesel oil and gas oil.
All supplies done on a Nomination basis through the Company's Head Offices, with the vessel giving at least 48 hours' notice to Aden.

FIRE PRECAUTIONS: As per the Refinery regulations (International Standard). Tug wires to be rigged and check list to be furnished.

GANGWAY/DECK WATCHMEN: It is recommended watchmen are employed; they can be supplied by Ship's Agent. Safety net to be rigged.

OPENING/CLOSING HATCHES: Normally carried out by stevedores, derrick-topping by ship's crew. Vessels not to move in harbour with beams off.
CUSTOMS ALLOWANCES: Tobacco/Wine, Spirit allowance. No restriction at the moment. Bonded stores not allowed to be supplied more than 1 hour before ship sails.
IDENTIFICATION CARDS: Shore pass to be carried at all times when ashore.

REPAIRS: Workshops are equipped to carry out: Boiler repairs; Plating and sheet metal work; Galvanising work/moulding work; Welding and blacksmith's work; Main and auxiliary machinery repairs; Carpentry and joinery work; Electrical and plumbing work; Refrigeration repairs; painting, cleaning and chipping. Repairs afloat to vessels up to 80,000 tons are undertaken; repairs to the largest vessels carried out mostly in Outer Harbour.

Radio engineering section with fully qualified personnel giving round-the-clock service of repairs and maintenance to radar and radio equipment.

During repairs, maintenance and painting – no rubbish to be thrown overboard, precautions to prevent pollution to be taken. No painting overside to be carried out without written permission from Port Authority. Chipping and/or scrapping overside strictly not permitted.
DRY DOCK: 1 sideways slipway taking 1,500 tons and floating dock lifting capacity 4,500 tons. Length 137 m., breadth 31 m. Max. draft 6.0 m.
REPATRIATION: Arranged through Ship's Agent and Immigration.
AIRPORT: About 5 miles from port. Flights to U.K. via Beirut (Middle East Airlines), Air France, Kuwait Airways, Air India, Ethiopian Airlines, Saudi Air and Alyemda also call.
TIME: GMT plus 3 hours. No alteration of clocks.
HOLIDAYS: Most holidays are religious which have movable dates. National holidays are 14th October and 30th November. Cargo work usually carried out during all holidays. Friday is a public weekend holiday.
POLICE/AMBULANCE/FIRE: Ambulance at Crater 53232; Harbour Police 22851; Port Health 22626/7; Fire 22222.
TELEPHONES: No connection to ships but link calls can be made on VHF through Yemen Communications using Channel 16 to call and working on Channel 26. Some Agents have private VHF Channels.
GENERAL: Outer harbour contains ample anchorage area for vessels requiring datum depths up to 54 ft. Inner harbour approached by 2.7 mile dog-leg channel, dredged to 38 ft., from Fairway Buoy in Outer Harbour where Pilots board. Inner harbour protected by breakwater at Steamer Point and by rubble mound. It provides 24 buoy or anchor-and-buoy berths, including 13 with oil bunkering facilities. Majority of these berths have a datum depth of 30 ft. or 38 ft., with max. length of ship ranging from 275 ft. to 750 ft. In addition 3 dolphin berths, with bunkering facilities, of 39 ft. datum depth and normally accommodating ships of 750 ft. – 900 ft. max. length; vessels of greater length can be accommodated with the approval of the Port Officer. Quays and wharves cater for shallower-draft vessels and lighters.

Oil harbour, serving refinery at Little Aden, reached by 38 ft. channel from Fairway Buoy, provides facilities for tankers of up to 750 ft. All berths and anchorages are under the jurisdiction of the Port Officer.

In order to facilitate berthing arrangements for ships calling at Aden, Masters are requested to furnish the Port Authority with the necessary information, such as, LOA, max. draft, g.r.t., type of ship, object of call, dangerous cargoes on board and IMO Classes, ETA and any other information Master thinks may be useful.
SHORE LEAVE: *Regulations:* In accordance with Art. 8 of the Immigration Rule No. 28 of the year 1969, all crew members coming ashore will be excused from obtaining visa provided they surrender their passports to the Immigration Officer-in-Charge. These passports will be given back to the holders before they return to their particular vessels. Any crew member unable to comply with these instructions will not be permitted to visit the town.

Ships' crew are not allowed to stay ashore after 0000 hrs.
SHIP SUPPLY SERVICE: There are no firms specialised in this field in Democratic Yemen. However, the Yemen Ports Authority has a large fleet of tugs and launches at Aden, and will, in 1985, have 2 Voith Schneider propelled tugs, 1 fast pilot launch and 2 mooring launches at the newly constructed port of Mukalla-Khalf. These craft are available at all times for rendering assistance to sick persons on board ships in the vicinity of the ports and are also available for crew changes, mail and spare parts delivery.

As to helicopter services, the Democratic Yemen Army and Air Force make their helicopters available for rescue at sea whenever possible.
REGULATIONS: Vessels must fly the National flag of P.D.R.Y. at foremast. No movement of "dangerous petroleum" at night. Vessels must vacate oil berths on completion of bunkering. Main engines must not be immobilised in an oil berth. Sufficient crew must remain aboard vessel at all times to move her.

Ships carrying dangerous cargoes calling at Democratic Yemen Ports must inform the Port Authority concerned not less than 48 hours prior arrival. IMO Class I dangerous cargo to discharge at Outer Harbour Anchorage, if IMO Class I in transit vessel will manoeuvre during day time only.

Immobilisation of main engines should not be executed at any berth before obtaining written permission from Port Authority, through ship's Agent. Same procedure applies for overside hull painting. Application to be through ship's Agent in duplicate. Main engine immobilisation in oil berths and Home Trade Quay not allowed.
DEVELOPMENTS: The oil harbour is being deepened and widened.

Additional berths and grain storage to be built.

SHIPMASTER'S REPORT: 1976
Documents:

Pilot: Sights Ship's Register to check tonnages.
Customs: 2 Crew Lists; 1 Bond List.
Immigration: 2 Crew Lists.
Doctor: 1 Health Form; 1 Vaccination List.

Note: Crew List should have consecutive numbers as well as Agreement numbers.
Agents: 2 Crew Lists; Arrival information sheet; Statement of Owners full address also Cable address; 2 Arrival declaration for Yemen Ports Authority; 2 Aden Port Log; 1 Charges sheet for Mail; 1 Sailing information sheet; 1 Currency refund sheet.

Agent brings these Forms on board and will assist with filling in the information.
Communications: It was found impossible to make Radio Contact with Aden prior to 5 days before arrival. Best time seems to be after Aden sends its Traffic List. VHF contact was made at 12 miles as the hills around Aden appear to blanket signals when further away. Channels 16, 13, 8 or 6.
Approach: This is straightforward. The BA Charts appear to be well up-to-date. The Fairway Buoy is easily seen at 8 miles. Pilot boards here. Pilot ladder required. Authorities will not allow the accommodation ladder to be used.
Mooring: There was a trainee Pilot with both the inward and outward Pilot.

Ship was swung using starboard anchor and 1 tug aft. Berthed at No. 4 Berth. Forward: 3 ropes to buoy on inside plus starboard anchor 5 shackles. Aft: 1 rope from port quarter and 1 from starboard quarter taken to outside buoy, then 2 ropes, 1 from each quarter taken to inside buoy. Ship then hove to be centred between the 2 after mooring buoys. When ship in position oil pipe-line, on floats is towed alongside.
Visit: Agent boarded with Doctor. At first Doctor was insisting all had to have Cholera vaccinations but is not really necessary. Immigration and Customs boarded. All pleasant and helpful. Bond was sealed.
Port Facilities: 2 fairly powerful tugs. Numerous mooring boats, 1 floating crane seen but as to lift capacity this was not ascertained. Port is run by The Yemen Ports Corporation. Like the Agency it is State owned.
Watchmen: Agents automatically provide 2 watchmen. Seemed to be alert.
Regulations: Masters are requested to assist the Port Authority by not allowing Bumboatmen or fishermen to board without written permission. The Port Authority advises Masters to be most careful if they do issue written permission. There were no bumboats about and no one seeked permission to come aboard to do business.

One half hour prior to sailing the Pilot signal red-white-red in a vertical line or "G" to be hoisted also call Port Control on VHF 16.

Use of ship's whistles or sirens is very controlled.
Bunkering: Ship's crane used to hoist pipe-line aboard. The bunkering operation went smoothly and the Oil people seemed co-operative.
Walport Film Exchange: Agents were cabled but it is necessary for an Officer to go with the Agent to make the exchange.
Mail: Mail posted in London on 22nd March or 23rd March was stamped as having arrived Aden 28th or 29th March.
General: It would seem that the Port Authority, State, etc., are very keen to build up a thriving Port. It would also seem that they endeavour to give a good efficient service. I gather there is a special duty free shop ashore for the purchase of souvenirs, goods, etc.

SHIPMASTER'S REPORT: March 1985.
Documents: See "Fuel".
Pilotage: Harbour Control was called on VHF Channel 16 two hours before arrival and again 4 miles off the Fairway Buoy. Information given from the Harbour Control regarding Pilot and berthing gave the impression of a well organised port. Night signal for a ship requiring Pilot is following: vertical lights, red-white-red.
Radio: From one week before arrival, radio messages were sent via Aden Radio (7OA) to Aden and Ethiopia. Radio Officer told me that Aden Radio proved to be easy and efficient to work with.
Fuel: Bunkering commenced immediately on arrival even before ship cleared by the Authorities. Authorities came on board just before departure to collect Crew Lists and Stores Lists. Crew's cabins were not searched and stores not sealed.

2 men from the Agents were on board to handle ship's matters.
Repatriation: 7 crew members were repatriated to Denmark, and 7 new crew members joined. Tickets for those to be repatriated were brought from Denmark with the joining crew. Crew change went smoothly.

Notices: Yemen Ports Authority – Port of Aden:

Masters are requested to assist the Port Authorities in controlling bumboat traffic as follows:

Bumboatmen and fishermen selling fish *may not* board ships without the written permission of the Master. Disregard of this rule renders the men liable to police action *after* the ship has left when evidence cannot be obtained from the ship. Masters can greatly assist the Authorities if they will ensure that they give written approval to bumboatmen and fishermen whom they have allowed to board the ship.
Port Officer, Aden.

To: All Masters of Vessels in Aden Port – From National Shipping Agency.

The undermentioned information is for your kind attention and guidance:

Immobilisation of Ship's Engines:

Please note that it is an offence to immobilise ship's engines WITHOUT written permission being obtained from the Yemen Ports Authority. To avoid heavy penalty, Masters are advised to forward their requests to us in duplicate, as ship's Agents, and should NOT immobilise ship's engines unless they are in possession of the written permission of the Yemen Ports Authority for the period approved.

Garbage Collections:

Appended below are extracts from Circular No. G/3/128 dated 25th January, 1984, of the Port Officer and Director of Marine Affairs, Yemen Ports Authority, Aden:

(a) Collection and removal of garbage from vessels is entrusted to persons authorised and licensed by the Yemen Ports Authority, Aden, and who work on a rota system.

(b) It is compulsory for a vessel staying in the harbour for a period exceeding 24 hours to avail itself of this service and fees will be collected per day **whether garbage has been collected or NOT.**

(c) Similarly it is compulsory for garbage collectors to call on vessels allocated to them daily unless other arrangements have been agreed with the Master of a ship. Any garbage collector who does not call on vessel allocated to him daily without prior agreement of the Master will not receive his fee that day if reported.

Note: Masters requiring special service for collection of extra garbage, i.e., refuse/wastes, etc., emanating from the cargo holds/engine room, etc., must put their written request in duplicate to us, as Agents, to arrange for the garbage collector to call on their vessel. The Master should also notify us in writing the charges agreed upon for the extra garbage with the Collector. This does not apply to U.S.S.R. vessels who are required to comply with the procedures below.

For Masters of U.S.S.R. Ships: Before applying for the collection of extra garbage, please first submit your written request in *4 copies* through the Agent for *approval* of the Resident Representative for U.S.S.R. ships. Please *do NOT* employ collection of the extra garbage before receiving this approval.

Scraping, Chipping and Painting in the Port:

Please note that as per instructions from Yemen Ports Authority, scraping, chipping and/or painting are *NOT ALLOWED* during vessel's stay in the port, unless prior permission is obtained from the Port Officer through us, as Agents. Any requests for the above must be forwarded to us in duplicate.

Shore Leave – Immigration Regulations:

All shore leave expires at 2300 hrs. and, therefore, all Masters, Ship's Officers, crew and passengers should be on board by this time. Overnight stay ashore is *not permitted.* Infringement of the above will be subjected to penalty and also delay to the ship.

Cash Advance to Master in Yemeni Dinars:

Cash advances required by Masters for payment to their crew in order to enable the crew to avail themselves of purchases from *Tax Free Shop,* require the following procedures to be complied with:

(a) Masters are required to render their requisitions in duplicate to the Agents during working hours together with 2 copies of Crew List.

(b) Either the Master or Chief Officer or Purser in person should have the requisition attested, stamped and signed by the Customs Officer before handing them to National Shipping Co. (the Agents).

(c) Together with the cash to Master the Agents will issue Purchase Certificates on Tax Free Shop.

(d) After completion of the purchases and 24 hours before vessel is due to sail, the Master should obtain *Purchase Clearance Certificate* from Tax Free Shop and hand it over to the Agents. This is most essential as against these Certificates only and after reconciling with the actual cash advanced, the Agents can accept the balance cash refund from Master.

Under the Exchange Control Regulations, it is an offence *not* to return the *UNUSED* Yemeni Dinars prior to sailing. Masters of vessels who received Cash Advance in Yemeni Dinars are advised to return *ALL* Yemeni Dinars remaining in their possession, to our representative who boards to clear the vessel, and ensure to obtain from him *on the spot* an official receipt of the National Shipping Company for the amount refunded, prior to departure of the vessel.

Victualling Allowance:

Free meals to Stevedores' Personnel/Watchmen.

Free meals are normally given by vessels by mutual arrangements between Masters and the Stevedores, to save time of the following persons who otherwise would have to go ashore for their meals:

One Tally Clerk per hatch working.
One Foreman.
One Cargo Supervisor.

It is left entirely to your discretion to supply free meals to the above mentioned personnel and the watchman or not. Kindly, therefore, note that we do *NOT* countersign or vouch expenditures.

Contacts on VHF: Masters of vessels can contact Agents on VHF (Channel 16) at any time during the *DAY* or *NIGHT* for any inquiries or services required. The Harbour Control also can be contacted on the same Channel.

Authorities: All in all the Port Organisation, Pilots, tugs and the Authorities gave us a good impression of the port.

AUTHORITY: Yemen Ports Authority, Tawahi, Aden, People's Democratic Republic of Yemen. *Tel:* 22666. *Telex:* 2278 Mawany Ad. *Cables:* Mawany. *Contact:* Director General.

MUKALLA (Khalf): 14.31 N. 49.09 E. (See Plan)

SHIPMASTER'S REPORT: August 1984. (Updated 1986).

PORT LIMITS: See "Gulf of Aden Pilot" (No. 64).

DOCUMENTS: See "Aden".

PILOTAGE: Compulsory for all vessels proceeding to and from the Port of Khalf. Call Pilot on VHF Channel 16. Vessels to display international signals day and night.

ANCHORAGES: Pilot Book as mentioned above gives sufficient information. A good practice during July each year (when S.W. monsoon is at its strongest) is to drop a second anchor in the morning and to heave it home again at about 1900 hrs. To keep second anchor out during the whole time of port stay is unadvisable as direction of turning on wind/tide is unpredictable and thus might end up with chains fouled.

RESTRICTIONS: Entering/leaving:

Anchorage: None.

New Port: Daytime only. During S.W. monsoon only between 0600 hrs. and 1100 hrs. Draft 10.3 m.

MAX. SIZE: Ship's normally accommodated at Khalf Port up to 145 m., drawing max. draft of 8.5 m. Larger ships could be accepted if permission granted in advance by the Port Authority.

HEALTH: As ship arrived from Aden, no formalities whatsoever.

RADIO: All communication before arrival/after departure Aden and Mukalla via Aden Radio (70A). This radio station is working satisfactorily.

Once in port (either at anchorage or alongside) it is forbidden to use ship's radio and/or telex.

Sending cables/telexes via the Agency is time-consuming.

TUGS: At least 1 tug, and probably 2 when port is open for shipping.

MEDICAL: Local hospital available but only a few facilities.

DENSITY: 1026.

FRESH WATER: Not available.

FUEL: Not available.

STORES: Not available.

REPAIRS: Not available.

CONSULS: None.

SURVEYORS: Available.

FRESH PROVISIONS: Not available.

GANGWAY/DECK WATCHMEN: Not required, no reports of pilferage of cargo and/or ship's stores.

HATCHES: Once open, not necessary to close again except for sailing. Climate: Warm/humid but no rainfall.

CUSTOMS ALLOWANCES: Bonded stores were sealed on arrival, no specific rules, no search parties of Customs.

On departure: No check of seals.

REPATRIATION: *Crew Change:*

Out-going: Via Mukalla Airport to Aden (6 times a week except Fridays) then either via Jeddah or Dubai/Kuwait to ultimate destination.

In-coming: Very difficult as visa required and not easy to obtain.

Note: Flights Mukalla-Aden and vice-versa may differ from printed timetables.

BANKS: National Bank of Yemen. Local currency: Dinar.

On presentation of passport-receipt, US$ (and only this currency) can be exchanged for Dinars (approximately US$3 for 1 Dinar).

It is very difficult to obtain US dollars in exchange for Dinars.

SHORE LEAVE: In Mukalla (as well as in Aden) when passing Customs Gate, passport is exchanged for receipt by the Immigration Officer on duty. When returning from shore leave this receipt is again exchanged for passport.

Note: It is difficult to make Officials understand that crew members and/or visitors from abroad are not in possession of a receipt, which makes a crew change extra time consuming (Charterer had to wait 3 hours before he was allowed to proceed to the ship).

SHIP SUPPLY SERVICE: See "Aden".

DELAYS: At present congestion may occur during the S.W. monsoon period.

In future congestion may occur as infrastructure of the new port leaves much to be desired (Roads to/in/from the port, direct delivery etc.).

GENERAL: *Transit Time Airmail Post:*

Mukalla-Europe: Minimum 2 weeks, maximum 3 weeks.

Europe-Mukalla: Minimum 2 weeks, maximum 3 weeks.

Agency: National Shipping Co., P.O.Box 8039, Mukalla, People's Democratic Republic of South Yemen. Cables: "Natship Mukalla" (via Aden Radio).

Importer: National Company for Home Trade, 5th Government Branch, Mukalla.

SHIPMASTER'S REPORT: April 1985.

PORT LIMITS: The port limits extend in a 270° direction from Ras Marbat for 2.5 miles, thence 000° along Long. 49° 07′ E. to the coast.

PILOTAGE: Pilot boards from launch, off the breakwater.

ANCHORAGE: For vessels over 10,000 d.w.t. (see below) all cargo is handled at the anchorage which may be closed from May to October due to its exposure to the S.W. Monsoon. Holding ground is reported to be variable. Reasonable anchorage obtained in 27 fathoms in position Lat. 14° 30.8′ N., Long. 49° 08.3′ E. approximately 5 cables due South of rocky projection on which part of town is built. Requests will be made to anchor closer to the shore to reduce barge transit time.

APPROACHES: Charts B.A. 3784 and 10.

Prominent terrain affords reasonable radar positions. Careful consideration should be given to night-time arrival if without radar due to the total absence of navigational aids at both the port and adjacent coastlines. The white house at Point Ras Marbat and the 4 tower ruins above the town are charted and conspicuous from seaward.

RESTRICTIONS: Berthing during daylight hours only.

MAX. SIZE: Max. size 10,000 d.w.t. Max. draft 8.8 m.

VHF: Channel 16 for Port Authority, call sign "Mukalla Harbour Master".

Agent can be contacted by calling Mukalla Harbour Office on Channel 16.

TUGS: One Voith Schneider tug of 2,000 h.p. Reportedly to be replaced by 2×1,000 b.h.p. tugs shortly.

BERTHING:

Berth	*Length* (m.)	*Depth* (m.)
No. 1	177.25	9.15
No. 2	184.00	9.15
Fisheries	160.00	4.50

Turning Basin: Width 250 m. Depth 10 m.
Harbour Entrance: Approx. width 200 m. Depth 11 m.
Lighters: 4×200 tonnes, 4×60 tonnes and 2×400 tonnes, all plus or minus 10% subject to swell conditions. Lighters are discharged either at Khalf Harbour or at town quay located on West side of town, rocky projection in position Lat. 14° 31.5′ N., Long. 49° 08.2′ E. Town quay is restricted in size and served by mobile cranes.
Stevedores: Labour is available 6 days a week, Saturday to Thursday inclusive.

Morning shift: 0700 – 1230 hrs. Afternoon Shift: 1300 until lighters are full.

The afternoon shift is unpredictable and subject to lighters being availble.
Medical: Local hospital affords basic medical requirements.
Fresh Water: Not available.
Fuel: Not available.
Shore Leave: Restricted by curfew to between 0800 – 1200 hrs. and 1600 – 1900 hrs. All persons going ashore are required to exchange passport for local pass at Immigration.

GENERAL:
Harbour: Khalf Harbour, recently completed and as yet uncharted (see "Plan") provides 2 commercial jetties and a fisheries jetty.
Swell: Reportedly maximum 20 cm. in S.W. Monsoon.
Provisions: None available with the exception of individual purchases of fruit or poor quality vegetables available from market stalls ashore. Fishing good from ship's rail and crayfish, etc. obtainable from local fishing boats.
Launch: By prior arrangement with Agent only. Special dispensation can be obtained from Harbour Master to utilise ship's lifeboat. Barges can be used if other arrangements do not materialise.
Communications: By cable only. Telephone system is reported to be unreliable.
Port Officials: Immigration and Customs Officials board on arrival. Passports or Seaman's Cards are sighted. Bond Locker and Beer Room sealed but sufficient released for shipboard consumption.

Usual port papers required.
Agency: The National Shipping Co., Mukalla, Yemen. Cables: "Natship, Mukalla". Telex: None but reported to be planned.

NISHTUN: 15.49 N. 52.14 E.

DOCUMENTS: See "Aden".
PILOTAGE: Compulsory. Manoeuvring during day time only. There is a lighthouse, range 28 miles, flashing 10 sec. in position Lat. 15° 49.0′ N., Long. 52° 12′ E. Also the breakwater tower has a flashing green light.
ANCHORAGES: Ships waiting for berthing normally anchor 4 – 5 cables S.E. of the breakwater tower and clear of the harbour entrance.
MAX. SIZE: Maximum size of ship that can be accommodated is up to 90 m. LOA and 5.5 m. draft. For ships over such size special permission should be obtained from Port Officer and Director of Marine Affairs.
VHF: Vessels approaching Port of Nishtun can communicate with Port Authority by using Channel 16 for calling during official working hours 0700 – 1400 hrs. (local time) .
BERTHING: Length of quay 200 m.
FRESH WATER: Available in small quantities.
FUEL: Not available.
WEATHER: *Monsoon:* During S.W. Monsoon waves may break over breakwater. Swell is created in basin so extra precautions by ships' Masters regarding mooring and securing the ship against the quay are required and extra ropes or wires are necessary.
AUTHORITY: See "Aden".

Yugoslavia

BAR: 42.05 N. 19.03 E. (See Plan)

PORT LIMITS: Seaward limits of the port defines a line drawn between "Voluica" light and Ratac Point.
DOCUMENTS:
On Arrival:
2 copies Health Declaration.
1 copy General Declaration.
5 copies Crew List.
5 copies Passenger List.
5 copies Crew Personal Effects.
3 copies Stores List.
1 copy Animal Pets Aboard.
1 copy Certificate of Financial Insurance on Civil Liability for Oil Pollution – only foreign ships carrying more than 2,000 tons of oil.
3 copies List of Hazardous Cargoes loaded on board and Cargo Plan for Hazardous Cargo (1 copy).
On departure:
5 copies Crew List, if any change.
List of Hazardous Cargoes, if loaded and Certificate of Stowage.

PILOTAGE: Advance notice 24 hours through ship's Agent. Pilot boat blue hull, white deck house, with letter "P" on each side. Pilot boards off West Breakwater. Use international signals to call Pilot. Pilot may also be contacted through Bar Radio on VHF.
ANCHORAGE: Safe anchorage West and N.W. off West Breakwater. Anchoring not allowed nearer then 0.5 mile off Breakwater.
RESTRICTIONS: Vessels enter/leave port by day and night. Tankers allowed only during daylight. Depth entrance 14 m..

No restriction on LOA and beam. Foreign nuclear ships enter only with special permission. Leaving or entering port for foreign tankers not allowed if not having said Certificate.
MAX. SIZE: Fully loaded vessels up to 12.5 m. draft.
RADIO: Bar-Radio, call sign YUW, 500 kHz and 447 kHz. Radio telephony on 2182 kHz on 2 metre band and on Channel 16.

Agents can be contacted through Bar-Radio on VHF.
TUGS: 2 tugs with twin 594 kW engine.
BERTHING: Berth assigned at Agent's request or Receiver's/Shipper's, both for liners or tramps, at the daily meeting of the Harbour Board.

3,500 m. of berthing space and able to accommodate up to 20 oceangoing vessels.
STEVEDORES: The Port Enterprise "Luka Bar" is the sole stevedoring company. Work is done in 2 shifts: first 0600 – 1400 hrs., second 1400 – 2200 hrs. Third shift can be ordered at daily meeting, paid as overtime.
MEDICAL: Medical care available at Medical Centre at Bar.
TANKERS: New oil berth can accommodate tankers up to 80,000 d.w.t., draft limit 12.5 m. Bunkers from local bunker station. Tank cleaning, pumping of slops and gas freeing not permitted in port.

Tankers must be ready to leave port at 30 minutes' notice, at any time and at request of Port Authorities.
CARGO HANDLING FACILITIES: Available for all kinds of general cargo, containers, pallets, Ro/Ro, bulk, fuel oil and chemical cargoes. Regular passenger service to Italy and from May – October to Greece.

Grain silos with 30,000 tons capacity with covered Vacuvator.
DENSITY: Sea water.
FRESH WATER: Available from hydrants on quay.
FUEL: Can be obtained from local bunker station. All grades available. A fuel barge may be available in the near future.
GANGWAY/DECK WATCHMEN: Available at Master's request.
OPENING/CLOSING HATCHES: Normally performed by crew, or as per Charter Party.
CARGO GEAR: *Mobile Shore Cranes:* 6×5 – 6 tons, 3×3 tons, 3×8 tons, 2×20 – 30 tons, 1×40 tons. Fork-lifts capable of handling containers, Vacuvators, 3 cranes for bulk cargoes. 1×40 ton container crane. If not agreed in C/P, loading and discharging is by shore cranes.
CUSTOMS ALLOWANCES: Yugoslav Customs Regulations apply.
IDENTIFICATION CARDS: Shore passes issued by local Police.
CONSULS: Same as "Rijeka".
REPAIRS/DRY DOCKS: Dry Docks at Shipyard "Veljko Vlahovic", Bijela, 36 miles from Port of Bar, capacity of about 130,000 d.w.t. and 35,000 d.w.t., available for all types of deck and engine repairs. Minor damage can be repaired while loading/discharging.
SURVEYORS: Representative of Yugoslav Register of Shipping at Tivat (80 km.). Bureau Veritas at Dubrovnik and Lloyd's Register at Split.
REPATRIATION: From Bar by bus, train (International Lines), and ship. From Airports Tivat, Titograd and Dubrovnik by plane.
TIME: Central European Time, GMT plus 1 hour. Summer time kept from March to October (date fixed annually).
SERVICES: Compass adjuster at Bijela (100 km.), RDF adjuster at Dubrovnik. Other electronics repairs via Split.
HOLIDAYS: January 1st and 2nd, May 1st and 2nd, July 4th and 13th, November 29th and 30th. Work can be arranged on Sundays and 2nd day of two-day holiday.
POLICE/AMBULANCE/FIRE: Police Tel. 92; Ambulance Tel. 94: Fire Tel. 93.
SHORE LEAVE: Allowed.
STORING: See "Prelims".
1. By truck.
2. Yugoslav Federal Regulations apply.
3. Yes.
4. Yes.
5. Yugoslav Customs Regulations apply.
6. Yes.

DEVELOPMENTS: See "Plan".
AUTHORITY: Lucka Kapetanija Bar, Obala 13, Jula 8, Src Gora, 85000 Bar, Yugoslavia. *Tel:* (085) 27-384, (085) 27-733. *Telex:* 63188. *Contact:* Captain Vickovic Vukasin, Harbour Master.
AGENT: Jadroagent – Bar. Obala 13, Jula 6, P.O.Box 10, 85000 Bar. Cable: Jadroagent Bar. Tel: (085) 22-195, 28-194. Telex: 63141 Yu Jadrag.

DUBROVNIK (Gruz Harbour): 42.38 N. 18.07 E. (See Plan)

DOCUMENTS/HEALTH/HOLIDAYS: Same as "Rijeka".
PILOTAGE: Compulsory. Pilot boards at a point situated approximately in centre of triangle formed by Kolocep Island, Daksa Island and Grebeni Rocks. Pilot boat is painted blue with large while "P" on hull, Length of boat about 13.0 m. Pilot boat may be contacted on VHF Channel 16.
ANCHORAGE: In about 22 fathoms in channel between Daksa Island and mainland. This anchorage is exposed to strong N.N.E. winds in Winter time.
RESTRICTIONS: Only port of Gruz is open to commercial traffic, the old port of Dubrovnik (within the city walls) can accommodate only yachts and small craft drawing under 9 ft.
MAX. SIZE: Max. length 230 m., max. draft 32 ft., no limits on beam.
RADIO: Dubrovnik Radio: *Telegraphy:* call sign YUX, working on 500 kHz and 447 kHz, (working 24 hours). Traffic list 0030, 0430, 0830, 1230, 1630, 2030 hrs.

Telephony: Working on 2182 kHz and 2615 kHz, (working 24 hours). Traffic list every odd hour + 20 minutes.
VHF: Listening Channel 16 throughout 24 hours and working on all Channels. Duplex Channel 23 with connection to national and international telephone network. All times are GMT.
TUGS: No permanently stationed tug boats, but can be ordered when necessary from other ports.
BERTHING:

Berth No.	*Length* (m.)	*Depth* (m.)
7	100	3.50
8	100	7.00
9	100	7.20
10	100	7.50
11	100	6.50
12	90	6.80
13	95	7.00
14	110	7.00
15	119	7.50
16	180	11.00
17	54	4.50

CARGO HANDLING FACILITIES: The port handles some bulk cargoes (grain and bauxite) occasionally and in small quantities but is not specially equipped for handling these and other cargoes. 6 cranes with capacity 1.5 tons-25 tons.
STEVEDORES: The port enterprise "Luka Dubrovnik" is the sole stevedoring company. Work is done in 2 shifts: first 0600 – 1300 hrs., second 1400 – 2100 hrs.
MEDICAL: General hospital and medical facilities available.
FRESH WATER: Available from hydrants on quay.
FUEL: Not available. Only oil for diesel engines in limited quantities. Heavy fuel can be delivered by coastal tankers from Split.
GANGWAY/DECK WATCHMEN: Available.
OPENING/CLOSING HATCHES: If not performed by crew, stevedores.
CUSTOMS ALLOWANCES: About 40 cigarettes and limited amount wine/spirits per man per day.
CARGO GEAR: Although operations are performed usually with shore cranes ship must have efficient cargo gear and relative certificates.
IDENTIFICATION CARDS: Issued by local police.
CONSULS: Sweden: Konzulat Kraljevine Svedske, Zeljarica 7, Dubrovnik. Tel: 23144. Cables: Svensk.

Netherlands (Vice-Consul): Vicekonsulat Kraljevine Holandije, Gruska Obala 46, Dubrovnik. Tel: 24947.
REPAIRS: Small repairs only.
SURVEYORS: Bureau Veritas.
REPATRIATION: By bus, ship or plane from Dubrovnik International Airport.
TIME: GMT plus 1 hour. Summertime. GMT plus 2 hours.
POLICE/AMBULANCE/FIRE: Police, tel. 92; Fire, 93; Ambulance, 94.
SHORE LEAVE: Allowed.
AUTHORITY: Lucka Kapetanija Dubrovnik, Gruska Obala 75, Dubrovnik. *Tel:* 23386. *Telex:* 27623 Yu Luckap. *Cables:* Luckap.
AGENT: Jadroagent – Dubrovnik. Gruska Obala 63, 50000 Dubrovnik. Cable: Jadroagent Dubrovnik. Tel. 23464 and 24464. Telex: 27514 Yu Jadrag.

KARDELJEVO (Formerly Ploce): 43.03 N. 17.26 E. (See Plan)

DOCUMENTS/HEALTH/HOLIDAYS: Same as "Rijeka".
PILOTAGE: Compulsory for vessels over 500 g.r.t. Pilot boards vessel at entrance of the channel within a circle of 3 miles radius from Point Visnjica. Pilot station on VHF Channel 16.
ANCHORAGES: Vessels are allowed to anchor West of the line which connects Kunova Cove on peninsula Peljesac with point Lat. 43° 03′ N., Long. 17° 24′ E. on land coast. Depth over 25 m.
RESTRICTIONS: Ship entering channel between Visnjica Point and embankment of right hand bank must keep in middle, leaving buoys to starboard. Recommended speed 5 – 8 knots. Also see "Tankers".
MAX. SIZE: Draft limited to max. 34 ft. 6 in. Length limited to 220 m.
RADIO: Nearest Radio Station Split Radio YUS – 2182 kHz and 2574 kHz. Radio station Dubrovnik Radio YUS – 2182 kHz and 2615 kHz.
VHF: Channel 14 and 16.
RADAR: No Port Radar service.
TUGS: One tug of 850 h.p., and one of 1,200 h.p.

BERTHING: Bosanska Obala (Berth Nos. 7 and 8): Length 227 m., drafts up to 31 ft. – no shore cranes.

Biokovska Obala No. 1 and 2 (Berth Nos. 4, 5 and 6): Length 368 m., drafts up to 32 ft., 7×5 ton cranes.

Gat Oslobodenja: North Side No. 3 (Berth Nos. 1, 2 and 3): Length 410 m., drafts up to 32 ft., 1×7 ton crane and 3×5 ton cranes. Head: Length 250 m. South Side No. 5 (Berth Nos. 20, 21 and 22): Length 507 m., drafts up to 34.5 ft., 5×10 ton cranes.

One floating crane up to 100 tons capacity.

BULK CARGO FACILITIES: Grain, ores and minerals by shore cranes equipped for grab discharge at Quay Nos. 3 and 5. Grain through feeders to railcars. Alumina silo (capacity 20,000 tons) at Quay No. 1 – length 140 m., draft 30 ft., with loading facilities. Coal handled by 5×10 ton travelling cranes, average discharge rate 250 tonnes p.h.

SPECIALISED CARGO HANDLING FACILITIES: No berth specially equipped for handling containers, only by floating crane.

BRIDGES: No bridges to pass through.

STEVEDORES: Port Enterprise "Luka Ploce" Kardeljevo, is the sole stevedoring company. Work in 2 shifts: 0600 – 1400 hrs. and 1400 – 2100 hrs. Overtime possible.

MEDICAL: Medical service available. Nearest hospital at Mostar (64 km.), Dubrovnik (110 km.) and Split (110 km.).

TANKERS: Oil Terminal – Channel Vlaska: one berth: vessel's length – no restriction, max. vessel's beam – 27 m., max. draft – 9.20 m. No slop/deballast facilities. When wind blowing over 10 knots direction North-South, and over 14 knots East-West, vessels are not allowed to sail through Channel Vlaska to oil terminal. Navigation through Channel Vlaska is allowed only during daylight with assistance of 2 tug boats. It is not allowed to berth or anchor vessels less than 41 m. out of marked line, while other vessels sailing through the channel.

Storage:

6 tanks × 10,000 tons each for crude oil and heavy fuel oil,
3 tanks × 5,000 tons each for natrium hydroxide,
1 tank for special chemical products,
2 tanks × 2,500 tons each and 2 tanks × 1,300 tons each for petrol.

DENSITY: 1010 – 1030.

FRESH WATER: Available from quay. Rate 15 t.p.h. – 20 t.p.h.

FUEL: Gas oil only. Delivery by tank trucks. Advance notice required.

GANGWAY/DECK WATCHMEN: Available but not compulsory.

OPENING/CLOSING HATCHES: May be done by crew, otherwise by stevedores with extra payment.

CUSTOMS ALLOWANCES: About 40 cigarettes and reasonable amount wine/spirits per man per day.

IDENTIFICATION CARDS: Shore pass issued by local Immigration Office.

REPAIRS: Only small repairs.

DRY DOCKS: None.

SURVEYORS: Lloyd's, A.B.S., B.V. and Yugoregister at Split (110 km. from Kardeljevo).

CARGO GEAR: Although the port is equipped with shore cranes and a floating crane of 100 tons capacity, ships must have efficient cargo gear and relative certificates.

REPATRIATION: Possible by train or bus. By plane from nearest airports, Split (110 km.), Dubrovnik (110 km.) and Mostar (64 km.).

TIME: GMT plus 1 hour. Summertime (from last Sunday in March till last Sunday in September) GMT plus 2 hours.

POLICE/AMBULANCE/FIRE: Police, Tel: 058/79006; Ambulance, 058/79702; Fire, 058/79143.

TELEPHONES: Not possible to place telephones onboard.

SHORE LEAVE: Allowed.

DELAYS: Only occasionally for bulk carriers.

DEVELOPMENTS: Draft is to be increased to 50 ft. by 1989. A new dock and equipment for bulk cargo is also to be constructed by 1989. 2 Ro/Ro berths to be constructed by 1988 – and between them a general cargo berth 150 m. length and 31 ft. depth. One berth (140 m.) with depth 26 ft. for loading livestock to be constructed in Vlaska Channel by 1988.

GENERAL: Lloyd's sub-Agents: Jadroagent Kardeljevo.

AUTHORITY: Lucka Kapetanija Kardeljevo, Lucka Kapetanija, 58340 Kardeljevo, Yugoslavia. *Tel:* 058/79008. *Cables:* Lucka Kapetanija Kardeljevo. *Contact:* Captain Busurelo Aleksandar, Harbour Master.

AGENT: Jadroagent – Kardeljevo, Trg Marsala Tita BB, P.O.Box 111, 58340 Kardeljevo. Cable: Jadroagent Kardeljevo. Telex: 26239 Yu Jadrag. Tel: 058/79964 or 058/79255.

KOPER: 45.31 N. 13.44 E. (See Plan)

PORT LIMITS: The seaward boundaries of the port are between "Debeli Rtic" (Punta Grossa) and Rt. Vilizan.

DOCUMENTS:

5 Crew Lists.
5 Passenger Lists.
8 Cargo Manifests.
2 Freighted Manifests.
2 Bills of Lading.
2 Store Lists.
1 Crew Effects List.
1 Cargo Gear Certificate.
1 Derat Declaration.
1 Health Certificate.

PILOTAGE: Pilot station may be contacted on VHF Channels 16 and 20 from 0600 hrs. until 2200 hrs. every day excluding holidays. Pilot boards 1 mile from entrance in roads or at anchorage. Definite notice to be sent by telex 24 hours before vessel's arrival in port area through its Agent in Koper. In case of bad weather, ship must wait for a Pilot at anchorage.

ANCHORAGES: Port area, depth 17 m., sandy bottom. Safe anchorages in case of S.E. wind near Rt. Vilizan and in case of N.E. wind near Debeli Rt. (Punta Grossa).

RESTRICTIONS: Vessels enter port by day and night, except tankers which enter during daylight hours and at nights in fair weather.

MAX. SIZE: General cargo and container vessels drawing up to 32 ft. and tankers with 40 ft. draft. No length restrictions.

HEALTH: Ship must have Health Declaration and in this case Pratique is automatic. In the event of any suspected disease or fever on board, Master must advise Harbour Master or Agent by VHF Channel 16 or by telegraph. Harbour Master's Office on VHF Channel 16 continuously.

RADIO: Communication on MW and SW through Rijeka Radio.

VHF: Communication on Koper Roads on Channel 16, 20 and 12. On Channel 20 it is possible to telephone outside the country.

RADAR: No service available.

TUGS: In area of old port, 2 available, 750 h.p. and 1,500 h.p. equipped for fire fighting.

BERTHING:

Terminal for General Cargo: Quays 833 m., depth from 7 m. to 12 m. Number of Berths 6. Roofed warehouses 127,764 sq.m., of which: air-conditioned warehouses, with a possibility of moisture and temperature regulation from 0°C to 20°C, 7,500 sq.m. Refrigerated rooms (freezing to −20°C) 23,502 cu.m. Special warehouses for cotton and hides 3,600 sq.m. 2 shore cranes, 3×20 ton mobile cranes, 1×12 ton mobile crane, 115 forklifts. Terminal capacity 750,000 tons annually.

Terminal for Timber: Quays 250 m., depth 6 m.–12 m. Number of Berths 2. Terminal area 25 ha., sheltered storage area 29,345 sq.m. 1 shore crane, 1 bridge crane, 27 forklifts, 40 towing units.

Terminal for Container and Roll-on/Roll-off Traffic: Quays 480 m., depth 12 m. Two berths for container vessels, 3 Ro/Ro ramps. Terminal area 20 ha. Closed warehouses 10,800 sq.m. Railway tracks 856 m. 178 electric connections for reefer containers. 3 container cranes (450kN). 5 straddle carriers. 4 transtainers. 26 forklifts. 41 towing units. Terminal capacity 135,000 TEU annually.

BULK HANDLING FACILITIES:

Terminal for bulk and liquids:

Cargoes handled:
Ores, coal and coke
Cereals and oilseeds
Liquid cargo (wine, edible oils, molasses, latex, phosphoric acid, oil and oil derivatives)

Capacities for ores, coal and coke: (Max. granulate size 150 mm.) Length of quay 200 m., depth at the quay 16 m. Number of berths 1, open storage 300,000 tons, 2×20 tons capacity shore cranes (at outreach 36 m.). Yearly throughput of the terminal 1.5 million tons. Unloading capacity on the quay 1,000 t.p.h. Loading capacity from the ship or from depot 5,000 tons/day. Possibility of berthing vessels up to 100,000 d.w.t. Daily despatch per railway 5,000 tons.

Capacities for cereals, oilseeds, grape-husks and other bulk cargoes: Length of quay 273 m., depth at the quay 14 m. Number of berths 1, sheltered warehouse (groundfloor) 30,000 tons. 2×20 tons capacity shore cranes (15 tons at 24.0 m.). The quay is equipped with moving belts and connected to the warehouse with a closed conveyor system.

Capacities for other bulk cargoes: Depth at the quay 7.0 m.-14.0 m. Number of Berths 3, open storage area 12,000 tons (2×6,000 tons). In addition to the special quay equipment with conveyor systems the port of Koper has 3 additional berths for dispatching of bulk cargoes direct.

Capacities for liquid cargoes: Wine 2,492 cu.m., edible oil and molasses 24,500 cu.m., chemicals 12,350 cu.m., phosphoric acid 3,000 cu.m., latex 1,320 cu.m., oil and oil derivates 114,900 cu.m.

BRIDGES: None.

STEVEDORES: Gangs ordered from "Luka Koper" who are stevedores, by Agents and forwarding Agents in Koper.

MEDICAL: Medical assistance and hospital available.

TANKERS: Tanker berth for crude oil with max. draft 40 ft., equipped with 3×8 in. arms.

FRESH WATER: Available from any pier. Rate of delivery about 15 t.p.h.

FUEL: None available.

FIRE PRECAUTIONS: Usual precautions.

CONSULS: Italy.

REPAIRS: Small repairs can be carried out at Koper. In Izola, 2 miles from Koper, is wharf "2nd October". The repair service for containers is in the Port.

DRY DOCKS: In Izola for vessels up to 16,000 d.w.t.

SURVEYORS: In Koper – Jugoregister. In Rijeka or Trieste all representatives.

GANGWAY/DECK WATCHMEN: Available at ship's request.

OPENING/CLOSING HATCHES: If not performed by crew, then by stevedores.

CUSTOMS ALLOWANCES: 200 cigarettes for each member of crew and 1 bottle of spirits per week and reasonable quantity of wine per man per day.

REPATRIATION: By bus, by railway from Koper or by air from the airports.

AIRPORT: Ljubljana (Brnik) – 120 km. Rijeka – 100 km. Pula – 100 km. Ronchi (Italy) – 80 km.

TIME: GMT plus 1 hour. Summertime kept.

HOLIDAYS: New Year's Days (1st, 2nd January), 27th April, May Days (1st and 2nd May), 4th July, 22nd July, 1st November, Republic Days (29th, 30th November).

POLICE/AMBULANCE/FIRE: Police No. 92, Ambulance No. 94, Fire No. 93.

TELEPHONES: From anchorage it is possible to telephone through VHF Channel 20. Telephones can be installed onboard at Berth Nos. 1a, 1, 2, 3, 4 and 5.

SHORE LEAVE: Allowed after clearing inwards (Free Pratique).

IDENTIFICATION CARDS: Shore pass issued by local police (without photograph).

REGULATIONS: None.

DEVELOPMENTS: At the port's pier No. 2 a new grain silo is under construction and will be operational in 1987.

It is built as a system with its own quay, rails, wagon loading/unloading station and with road connection.

Storage capacity of 60,000 tons available for (export and import) grain, oil-seed and their derivates.

Whole system works automatically with a capacity of 500 t.p.h. with the possibility to increase capacity up to 1,000 t.p.h. Berth: 182 m. equipped with a continuous ship unloader and loader depth 14.5 m.

Bulk Terminal: (2nd stage) Extension of the quay by additional 200 m., depth of the whole basin 18.0 m., 2 unloading bridges, capacity 2×1,200 t.p.h. Enlargement of depot also to be undertaken.

SHIPMASTER'S REPORT: October 1979.

Stevedores: Port works 5 days a week in 2 shifts; 1st shift 0600 hrs. to 1300 hrs.; 2nd shift 1400 hrs. to 2100 hrs.; a third shift may be worked from 2200 hrs. to 0530 hrs. Also possible to work 1st, 2nd and 3rd shifts on Saturdays and Sundays.

Pilotage: Pilot station contacted on VHF Channel 16 from 0600 hrs. to 2200 hrs. Vessels berthed alongside during these times. Pilots board about 1 mile from the entrance to the port or at the anchorage. Pilot vessel painted blue in colour and displaying large white 'P' on the bow. Pilots speak very good English. Vessels unberthed 0001 to 2400 hrs.

General: The use of cameras is prohibited within the port area.

SHIPMASTER'S REPORT: June 1981.

According to Pilot they do not have VHF in their office but use the set in the Harbour Master's Office. We found we could not contact the Pilots until after anchoring and when the Pilot boarded he said it was only because he happened to be in the Harbour Master's Office at the time.

Tankers always berth port side to and do not normally sail after dark as they have to move out of the channel stern first and then swing.

Moorings usually 4 head ropes and 1 backspring with similar aft. After ropes go to 2 buoys and require lashings. After backspring and forward moorings go to bollards ashore.

There is a telephone, for local calls, in the office on the jetty.

Use tug's lines berthing and ship's lines sailing.

Vessel is inspected by Harbour Master and they are very particular about ship's documents especially the Certificate of Insurance or other financial security in respect of civil liability for oil pollution damage.

If wishing to visit Consul it is apparently easy to cross the border to Trieste but best to allow boarding Immigration Officer to examine your passport. A long gangway is required (no shore gangway) as jetty is low.

AUTHORITY: Luka Koper, Vojkovo nabrezje 38, Yu-66000 Koper. *Tel:* (3866) 25-361. *Telex:* 34-110 and 34-168 Yu Luka. *Contact:* Commercial Department.

AGENT: Jadroagent – Koper. Vojkovo nabrezje 30, P.O. Box 60, 66000 Koper. Cable: Jadroagent Koper. Telex: 34234 Yu Jadrag.

PULA: 44.52 N. 13.50 E.

DOCUMENTS/HEALTH/HOLIDAYS: Same as Rijeka.
PILOTAGE: 48 and 24 hours' notice of ETA must be given to Agent. Pilot boards vessel off the breakwater. Merchant vessels bound for Pula must signal their name and port of departure to the signal station at Muzil.
ANCHORAGES: Vessels waiting for berth or Free Pratique can anchor in the outer harbour at about 0.4 miles West of the island S. Andrija.
RADIO: Coastal station Rijeka-Radio (call sign "YUR").
VHF: Communications with Agents and Port Authority through VHF on Channel 16.
TUGS: Up to 600 h.p. available from shipyard "Uljanik", otherwise from Rijeka.
BERTHING:

Gat Rijeka: North side length: 138 m., depth 20 ft.
South side length: 150 m., depth 17 ft.
Obala Ugljen: length 140 m., depth 26 ft.
Gat Ugljen: East side length: 160 m., depth 31 ft.
West side length: 140 m., depth 28 ft.
Obala Tv.Cementa: length 146 m., depth 20 ft.
Obala Uljanik: length 160 m., depth 22 ft., used only for discharge of steel plates.

CRANES: No shore cranes except one of 5 tons at Obala Tv.Cementa and one of 75 tons at Obala Uljanik.

A floating crane of 45 tons at shipyard "Uljanik".

Two mobile cranes of 17 tons and 20 tons respectively.

STEVEDORES: Port Enterprise "Luka" is the sole stevedoring company. Working 2 shifts: from 0700 to 1500 hrs. and 1500 to 2300 hrs. Saturdays, Sundays and holidays may be worked on overtime.
MEDICAL: Hospital and all kinds of medical assistance available.
FRESH WATER: Available from quay.
FUEL: Available by barge from Rijeka – advance notice required.
REPAIRS: Available from local shipyard "Uljanik" and "Crvena Zvijezda".
SURVEYORS: Lloyd's Register, Jugoregister, Norske Veritas.
GANGWAY/DECK WATCHMAN: Service available.
OPENING/CLOSING HATCHES: May be carried out by crew otherwise by stevedores on extra payment.
CUSTOMS ALLOWANCES: About 40 cigarettes and reasonable amount of wine/spirits per man per day.
CARGO GEAR: Loading/discharging by ship's own gear.
REPATRIATION: Possible by train, bus and air.
AIRPORT: At Pula.
TIME: GMT plus 1 hour. Summertime kept.
POLICE/AMBULANCE/FIRE: Police tel. 92; Ambulance tel. 94; Fire tel. 93.
IDENTIFICATION CARDS: Shore passes issued.
REGULATIONS: Speed limit: within a line joining Prostina Point (Point Kristo) and Kumpar Point vessels must proceed at a speed not exceeding 8 knots and within a line joining Andrija Island and Sv. Petar Peninsula at a speed not exceeding 5 knots.
GENERAL: Lloyd's Agents: Jadroagent-Rijeka.
AUTHORITY: Lucka Kapetanija-Pula, Obala M. Tita 18, Pula. *Tel:* 220-37, 276-46. *Telex:* 25251. *Cables:* Luckap Pula. *Contact:* The Harbour Master.

AGENT: Jadroagent – Pula, Obala Marsala Tita 14, 52000 Pula. Cable: Jadroagent Pula. Telex: 25210 Yu Jadrag.

RIJEKA (including Bakar, Omisalj, Urinj, Sepen and Rasa): 45.19 N. 14.26 E. **(See Plan)**

PORT LIMITS: Outer line of Anchorage area.
DOCUMENTS:

5 Crew Lists
5 Passenger Lists
3 Manifest of Dangerous Cargo (send cable before arrival with description)
3 Store Lists
2 Private Declaration
9 Cargo Manifests
3 Freight Manifests
2 Transit Manifests
2 Cargo Plans
2 Copies of Bill of Lading

Cargo and Freight Manifests and Cargo Plan with Hatch List if possible should be mailed to Agent from loading port.
PILOTAGE: Compulsory for vessels over 500 g.r.t. Pilot boards in the roads within anchorage area limit. Pilot on VHF Channels 8, 12 and 16.

For oil terminal at Omisalj Pilot boards 5 miles south of Rijeka Main Light. On request, Pilot will board tankers over 200,000 d.w.t. in the northern part of Kvarner at Lat. 45° 02′ N., Long. 14° 14′ E. approx.

Pilot available 24 hours. ETA to be sent 72 hours, 48 hours and 24 hours prior to arrival
ANCHORAGES: All vessels with exception of those loaded with dangerous or hazardous cargoes, must anchor in the zone enclosed by the following points:

a) Lat. 45° 20.0′ N., Long. 14° 22.7′ E.
c) Lat. 45° 15.1′ N., Long. 14° 27.1′ E.
b) Lat. 45° 17.5′ N., Long. 14° 20.0′ E.
d) Lat. 45° 18.4′ N., Long. 14° 28.5′ E.

Tankers and vessels with dangerous cargoes must anchor in the following zone:

a) Lat. 45° 17.8′ N., Long. 14° 28.0′ E.
c) Lat. 45° 14.1′ N., Long. 14° 29.4′ E.
b) Lat. 45° 15.1′ N., Long. 14° 27.1′ E.
d) Lat. 45° 16.1′ N., Long. 14° 31.8′ E.

APPROACHES: The access entrance to the Rijeka Port Basin is 250 m. wide and that of the Susak Port Basin is 45 m. wide.
HEALTH: To obtain Free Pratique 24 hours before arrival advise following details: number of crew and passengers, health conditions and possible infectious diseases. No person allowed to leave vessel until Free Pratique obtained.
RADIO: Rijeka Radio, call sign YUR 500 kHz, Radio telephone on 2m. band covering area of North Adriatic or by VHF Channel 16.
VHF: Port Authority on Channels 16 and 20. Tugs on Channels 16 and 8. Pilot on Channels 16, 8 and 12.
TUGS: 600 h.p. to 2,200 h.p. available.
BERTHING: General Cargo Facilities:
Rijeka Basin:
Gat Otokar Kersovani (The Otokar Kersovani Pier):
East: Length 150 m.
Depth alongside 7.30 m.
Head: Length 80 m.
Depth alongside 6 m.
West: Length 135 m.
Depth alongside 6.30 m.

This pier is mainly used for the accommodation and direct or indirect loading/unloading operations of smaller lots of general cargo.

Equipment: 2 dockside cranes of 1.5 tons capacity.

Ljubljanska Obala (The Ljubljana Quay):
Length 246 m.
Depth alongside 9.60 m. (31 ft. 6 in.)

By fitting appropriate quay fendering, this quay can accommodate vessels with maximum length of 200 m. and maximum draft 32 ft. 10 in.

It is mainly used for direct or indirect loading/discharge operations of larger lots of general or bulk cargo.

Equipment: 7 × 3 ton dockside cranes.

Gat Vladimir Nazor (The Vladimir Nazor Pier):
East: Length 195 m.
Depth alongside 8.50 m.

This quay is mainly used for direct or indirect loading/discharge operations of larger lots of bulk or general cargo.

By fitting appropriate fendering vessels of max. length 195 m. and max. draft 31 ft. 6 in. can be accommodated.

Equipment: 3×5 ton dockside cranes.

Pier Head: Length 84 m.
Depth alongside 7.5 m.
West: Length 169 m.
Depth alongside 8 m.

This quay is mainly used for direct or indirect loading/discharge operations of general cargo or smaller lots of bulk cargo by means of ship's cargo gear.

Gat Vladimir Gortan (The Vladimir Gortan Pier):
East: Length 120 m.
Depth alongside 7.30 m.
Head: Length 79 m.
Depth alongside 7.20 m.
West: Length 120 m.
Depth alongside 7.30 m.

The Pier is mainly used for direct or indirect loading/discharge operations of smaller lots of general or bulk cargo.

Equipment: 6 × 1.5 ton dockside cranes (three cranes on the East quay and three on the West quay).

Zagrebacka Obala (The Zagreb Quay):
East: Length 161 m.
Depth alongside 7.30 m.

This quay is mainly used for direct or indirect operations of general or bulk cargo lots.

West: Length 200 m.
Depth alongside 7.50 m.

This quay is normally used for loading/discharge of larger lots of general or bulk cargo. By fitting appropriate fendering a ship with max. length 180 m. and max. draft 31 ft. 6 in. can be accommodated.

Equipment 7 × 1.5 ton dockside cranes.

Splitska Obala (The Split Quay):
Length 158 m.
Depth alongside 6.25 m.

This quay is mainly used for direct or indirect/discharge operations of smaller lots of general or bulk cargo.

Gat "1 Maj" and Gat "29 Novembar" (The "1 May" Pier and the "29 November" Pier): These two piers within the Rijeka Port Basin, with the total quay length 450 m. and max. depth about 6 m., are used for the accommodation of passenger ships, car-ferries, fishing vessels and other smaller craft.

Trscanska Obala (The Trieste Quay):
Length 189 m.
Depth alongside 6.50 m.

This quay is mainly used for loading/unloading smaller volumes of general cargo, and is used occasionally for berthing and handling smaller Roll-on/Roll-off vessels.

Lukobran Rijeka (The Rijeka Breakwater):
Length 1,768 m.
Depth alongside 5.50 m. – 7.20 m.

A 10,000 d.w.t. floating dock is berthed along the breakwater quay. On the quay there is a port control centre with pilot station. The operational part of the quay is 700 m. long and is used for loading/unloading smaller lots of general cargo and for direct operations with bulk cargo and timber. A part of the quay is used for ship derat and for occasional minor repairs on ships.

Equipment: 4 × 5 ton dockside cranes.

Note: Almost all the quays and breakwaters are rail and road connected.

Susak Basin:

Obala 10.Rujna (The 10 Rujan Quay):
Length 240 m.
Depth alongside 6.50 m.

This quay is mainly used for direct or indirect operations of general cargo and timber.

Equipment: 7 × 3 ton dockside cranes.

Supilova Obala (The Supilo Quay):
Length 132 m.
Depth alongside 7.50 m.

Mainly used for loading timber by means of the ship's own cargo gear.

Gat Barcic (The Barcic Pier):
North: Length 106 m.
Depth alongside 8 m.
South: Length 106 m.
Depth alongside 7.80 m.

This pier is mainly used for the loading/discharge of smaller lots of general cargo or timber and for unloading smaller volumes of liquid cargo (wine, latex, etc.).

CRANES: Shore cranes with lifting capacities from 1.5 to 5 tons available at respective berths except at Gat V. Nazor – West side, Splitska Obala, Trscanska Obala, Supilova Obala and Gat Barcic where vessel's own gear must be used. Floating cranes of 30 and 100 tons. At shipyard "3.Maj" berth (20 ft.) 1 bridge crane of 300 tons.

CONTAINER FACILITIES: *Kontejnerski Terminal "Brajdica" (The Brajdica Container Terminal):* The Brajdica Container Terminal is located in the Eastern part of the Susak Port Basin at the mouth of the river Rjecina. It includes a 275 m. long quay with depth alongside 12 m. and a 60 m. wide Ro-Ro ramp.

Equipment: 2×40 ton container cranes, straddle carrier, side loader, trailers, tugmasters, fork lift trucks, etc.

The terminal has about 60,000 sq.m. stacking area and a special container repair workshop.

Total annual capacity of the terminal is 40,000–50,000 TEUs. The terminal area is being constantly extended.

Ro/Ro vessels handled at Bakar (see below).

BULK CARGO FACILITIES:

Rijeka Basin:

Beogradska Obala (The Beograd Quay):
East: Length 110 m.
Depth alongside 7.8 m.

The quay is mainly used for working vessels carrying general or bulk cargo.

West: Length 257 m.
Depth alongside 7.30 m.

The silo located on this quay has a 60,000 tons storage capacity for grain and oleiferous seeds and is equipped with 3 ship loaders/unloaders with a total capacity of 600 t.p.h.

Vessels of maximum length of 250 m. and max. draft up to 34 ft. can be accommodated, provided that the ship lies 8–10 m. distant from the quay, berthed by dropping port bow anchor, stern line being moored to the buoy.

Gat Lole Ribara (The Lola Ribar Pier):
Length 160 m.
Depth alongside 7.90 m.

This pier includes a covered storage for fertilisers, single storage capacity 15,000 tons, and is equipped with the handling and bagging facilities for all types of fertilisers.

By fitting appropriate fendering vessels with max. length 180 m. and max. draft 32 ft. can be accommodated.

Susak Basin:

Lukobran Susak (The Susak Breakwater):
Length 320 m.
Depth alongside 6.50 m.

The breakwater quay is mainly used for loading/discharge of dry bulk cargoes and ships with max. length 180 m. and max. draft 31 ft. 6 in. can be accommodated. The ship must be berthed at a distance of 5 – 6 m. from the quay by dropping the port anchor with stern line moored to the breakwater.

Equipment: 6 × 5 ton dockside cranes.

Bakar:

Obala Podbok (The Podbok Quay):
Length 400 m.
Depth alongside 18.50 m.

Vessels with max. length 300 m. and max. draft 17.50 m. can be accommodated (170,000 d.w.t.). The quay is used for loading/discharging bulk cargoes such as iron ore, bauxite, coal, etc., rate up to 2,000 t.p.h.

Equipment: 3 ship unloaders (1 × 45 ton and 2 × 16 ton capacity). The stockyard storage capacity is 400,000 tons. A special conveyor system connects the bulk cargo terminal with the nearby Coke Plant on the West coast of the Bay of Bakar for unloading and delivery of coal to the Coke Plant.

Obala Goranin (The Goranin Quay):
Length 84 m.
Depth alongside 9 m.

This quay is used for loading coke into smaller vessels and for loading/unloading operations with general cargo stored in the Back-up Storage Facility "Skrljevo".

Ships of 160 m. length and max. draft 29 ft. 9 in. can be accommodated. To the West of the quay a new Roll-on/Roll-off berth is being constructed.

Equipment: 2 × 5 ton dockside cranes.

Also see "Shipmaster's Report" dated November 1979.

SPECIALISED CARGO HANDLING FACILITIES:

Sepen:

New terminal for LPG and liquid chemicals carriers at Sepen-Krk Island (about 8 nautical miles S.S.E.'ly from Rijeka port) operated by Dina – Petrokemija. It consists of three berths: 2 "T" concrete jetties and one concrete multi-purpose berth. Jetty "A" is for liquid gas carriers up to 15,000 cu.m., max. draft 11.5 m. Jetty "B" is for chemical tankers up to 60,000 d.w.t., max. draft 15 m. Length of multi-purpose quay is 90 m., max. draft 6 m., no shore cranes. Loading arms (8 in.) for ethylene liquid, ethylene vapour, VCM liquid and VCM vapour are on berth "A". Loading arms (8 in.) for fuel oil, caustic soda solution and EDC liquid (plus EDC vapour 3 in.) are on berth "B".

Rasa: ALSO SEE S.M.R. DATED ~~SEPT~~ AUG. 87

Bazen Rasa (The Rasa Port Basin): The Rasa Port Basin is located some 30 nautical miles S.W. of Rijeka in the naturally protected bay of Rasa which is 5 km. long, with the navigable channel about 40 m. deep.

The port facilities in the Bay include:

165 m. long quay, with 11 m. depth alongside, used mainly for loading/unloading sawn timber. The quay area includes about 150,000 sq.m. of open space and 40,000 sq.m. of covered storage space for timber.

Equipment: 3 × 5 ton dockside cranes.

Separate pier with a berth, 25 m. long and 7 m. deep enabling the accommodation of ships up to 100 m. in length; it is exclusively used for loading livestock. The livestock terminal also includes a stable for the acceptance of about 700 head of cattle at a time.

STEVEDORES: Port Enterprise "Luka" Rijeka is the sole stevedoring company. Working 2 shifts: 1st from 0630 to 1430 hrs., 2nd shift from 1430 to 2230 hrs. Saturdays, Sundays and holidays may be worked on overtime. Unloading of bulk cargo at the basin of Bakar during the first shift on Saturday is considered to be an ordinary working shift. Timber operations normally performed during first shift only.

MEDICAL: Three hospitals and all kinds of medical assistance.

TANKERS: At Bakar Basin, berths for tankers up to 80,000 d.w.t. stern to shore and up to 40,000 d.w.t. alongside quay (draft 32 ft.) loading refined oil products.

At Urinj – 5 miles East of Rijeka – 1 berth for tankers up to 200,000 d.w.t. discharging crude oil. Also used for loading of virgin naphtha shipments. Tankers moor stern to quay using both anchors. Depths of 17 m. marked by 2 buoys. Cargo hoses: 1 flexible floating hose of 20 in. with 2 ends of 12 in. each. For connecting hoses on ship's manifold a derrick or crane of minimum 5 tons S.W.L. required. Also see "Shipmaster's Report" dated February 1980.

At Omisalj (Krk Island) (Lat. 45° 13.4′ N., Long. 14° 32.2′ E.) – 7 miles S.E. of Rijeka – new oil terminal for tankers up to 350,000 d.w.t. (minimum size 40,000 d.w.t.) and with draft up to 27 m. Two "T" shape piers (steel platforms) for alongside berthing. Each berth is equipped with four unloading arms of 16 in. for crude oil discharge and 2 arms of 12 in. for bunker delivery. Fresh water available, rate 25 t.p.h.

DENSITY: 1020 to 1025 depending on place, season and weather.

FRESH WATER: Available from quay in any quantity.

FUEL: All grades of bunker available by barge – advance notice required.

FIRE PRECAUTIONS: If 2 tankers moored side by side in Bakar, tug required to stand-by. Tankers moored stern to quay must have towing line ready.

CONSULS: Netherlands, Sweden and Denmark. Others at Zagreb and Belgrade.

REPAIRS: All kinds available.
DRY DOCKS: 3 Floating Docks: 5,600 tons, 12,000 tons and 24,000 tons lifting capacities.
SURVEYORS: Lloyd's Register, Bureau Veritas, American Bureau, Jugoregister.
GANGWAY/DECK WATCHMEN: Service available.
OPENING/CLOSING HATCHES: May be carried out by crew, otherwise by stevedores for extra payment.
CUSTOMS ALLOWANCES: About 40 cigarettes and 0.5 litre wine and a reasonable amount of spirits daily per man.
CARGO GEAR: Although operations usually by shore cranes, ship must have efficient cargo gear and relative certificates.
REPATRIATION: Possible by train, bus and air.
AIRPORT: At Krk Island (28 km. from Rijeka).
TIME: GMT plus 1 hour. Summertime kept.
HOLIDAYS: January 1st and 2nd, May 1st and 2nd, July 4th and 27th, November 29th and 30th. Work can usually be arranged on Saturday, Sundays, January 2nd, May 2nd and November 30th from 0700 to 1400 hrs. on extra payment. If a holiday falls on Sunday the next working day becomes a holiday.
TELEPHONES: Connection possible upon special request.
SERVICES: Facilities for discharge of tank-washings at Bakar, compass adjusting.
IDENTIFICATION CARDS: Shore passes issued.
GENERAL: Lloyd's Agents, Jadroagent – Rijeka.
DELAYS: Waiting for some specialised berth occasionally experienced.
DEVELOPMENTS: The new "Dina – Petrokemija" terminal is under construction and upon completion of new plants will be able to handle other products (gases and chemicals). See "Plan".

SHIPMASTER'S REPORT: Urinj: February, 1980.
INA Petroleum Co. Berth: See "Plan".
Office: The Port of Urinj, telephone 761.011 ext. 250. Can be contacted via Rijeka Radio at any time.
Berth: The petroleum berth of Urinj (Lat. 45° 17′ N., Long. 14° 31.7′ E.) is situated 5 miles E.S.E. from the port of Rijeka. Its position is marked by a buoy whose characteristic is Fl.W. 3 sec. It is open 24 hours a day for commercial activities. The depth of water at this berth varies from 45 m. to 20 m. below the level of mean tides. The bottom is mud. Because of this it can accept tankers up to 200,000 d.w.t.
Documents on Arrival: The following documents are required on arrival:
5 Copies of a Crew List (full personal data, including birth place, date of birth, etc., are necessary).
5 Copies of Passenger List – if any
2 Copies of List of Ship's Stores
2 Copies of Manifest of Dangerous Goods – if any
2 Copies of Customs Declaration List
2 Copies of Transit Cargo Manifest
Cargo Manifest with extra copy for Customs.
Notice of Arrival: Vessels should give notice of arrival to their Agents via Rijeka Radio 48 hours and 24 hours in advance.
Approaching Directions: After passing Cape Jablanac a course of 060° leads safely to the tanker anchorage. The Pilot will board at anchorage area from a tug if the vessel is to proceed to the berth immediately.
VHF: Vessels equipped with VHF radio telephone should contact "Rijeka Pilot" on Channel 8 or "Rijeka Radio" on Channel 16 for berthing instructions.
Tugs: For berthing of a vessel the use of tugs is obligatory.
Gangway: Vessels should use their own port side gangway.
Manoeuvring: When the Pilot boards the vessel and forward tug is secured, both anchors (with one shackle in the water) should be ready for use. The stern mooring lines are carried toward the shore by a mooring boat. Usually 9 to 10 lines are used (6 from the vessel, and 4 from shore).
Connecting Hoses: After mooring operations have been completed, the connecting hoses will be brought alongside the starboard side of the vessel by a workboat. There are 2×12 in. hoses available, one for crude oil and one for products. Connecting and disconnecting of the hoses will be done by INA personnel, supervised by the Port Captain. The assistance of the ship's crew in operating windlasses, winches, etc. is required.
Note:
a) A minimum S.W.L. of 5 tons is required for the 12 in. hoses.
b) The vessel is responsible for good condition and effectiveness of the equipment.
c) Vessels are required to keep main engine on stand-by all the time during their stay in berth, therefore no repairs to the main engine of the vessel may be undertaken during berthing. Power must be kept on for possible adjustments of mooring lines, anchors, and derricks.
Discharging: When the connecting of the hoses is completed, and the ullage report completed, Chief Officer will report the readiness of the vessel for discharging operations. The vessel is required to discharge the cargo as quickly as possible. Max. discharging rate is about 6,000 t.p.h.
Sailing: After the discharging operation is completed, the vessel should leave the berth as soon as possible. The Master should keep in touch with the Port Captain who will despatch a Pilot and Authorities on time.
Deballasting: After arrival at anchorage or berth and Free Pratique has been granted, the Loading Master will take samples of the ballast water for quality checks. Permission to discharge ballast water overboard will be granted by the Port Captain only. If laboratory analysis is not accepted by the Port Captain, vessel must shift to the slop-discharging installation at Bakar. The "not accepted ballast water" must be discharged there through stern discharge line only. After tank cleaning and line-flushing, vessel will be returned to Urinj with or without ballast at Master's option.
Loading: INA Refinery produces several kinds of products.
Cargo Loaded: Clean unleaded virgin naphtha.
Density at 15° Centigrade –0.74.
Loading rate – average 1,500 cu.m.p.h.
Documents on Sailing: The following documents are required on sailing:
4 Copies of Crew List.
4 Copies of Passenger List.
2 Copies of List of Ship's Stores.
Free Pratique: To obtain Free Pratique by radio, vessels should send the following information to their Agent 48 hours in advance via Rijeka Radio:
The number of crew and passengers,
Health conditions and possible infectious diseases.
Note: No one is allowed to leave the vessel until Free Pratique is granted.
Medical: There are 3 well equipped hospitals in Rijeka whose medical staff is capable of giving full medical protection.
Fresh Water: There is an unlimited supply of fresh water available. It is supplied by a floating pipe-line attached to the Eastern signal buoy.
Fuel: All grades of bunker are available. Order must be placed 48 hours in advance.
Laundry: Laundry service has to be ordered immediately after arrival in order to ensure delivery of the clean laundry in time.
General: All kinds of repairs available by shipyard "Viktor Lenac".
There is a floating crane capacity up to 100 tons.
Dry docks accepting ships up to 60,000 d.w.t. also available.
Ship Supplies: In order to ensure timely supply of food and groceries vessel should place an order through the authorised stores (ship chandlers) immediately after or before arrival by radio.
Shore Passes: Shore passes are required for personal identification and serve as an entry permit to the terminal. Shore passes must be returned to the Immigration Office before sailing.
Transportation: During the time at the berth transportation of the crew and passengers from the vessel to the terminal is arranged by a shore launch from 0800 – 2400 hrs.
Lights: Manifold and poop mooring areas should be adequately lit to enable night mooring and discharging operations to be carried out with safety. Sea area around the ship also has to be properly illuminated.
Deck Watch: Deck watch must be maintained at all times while the vessel is in berth. In addition to its normal duties, the watch must inspect the hose connections and area around the ship against oil spillage, pollution, and to prevent unauthorised persons from boarding the vessel.
Action in Case of Emergency: In the event of a fire, oil spillage, or other emergency on the vessel, the emergency signal is 3 or more blasts of not less than 10 seconds duration each on whistle or siren supplemented by a continuous ringing of the general alarm bells.

SHIPMASTER'S REPORT: Bakar: November 1979.
Approaches: Entry to Rijeka Bay is made between mainland (Istra) and the island of Otok Cres. A small ferry runs between the two from a landing stage just North of Rt. Prestenice and another connects with Rijeka. A very conspicuous, red and white horizontal striped 700 ft. high chimney is situated about 1.5 miles West of Bakarski Zaliv and makes a good steering guide for the run across as the actual entrance is difficult to pick out being very narrow and blending in with the hills behind.
Anchorage: Initially we were ordered, by Port Authorities, to anchor 1 mile S.W. of the chimney but later requested to move closer to Rijeka for convenience in servicing vessel. Second anchorage 1.5 miles South of main breakwater. Depth of water both places 32 fathoms and we used 10 shackles cable on port anchor. Bottom is glutinous mud and despite Force 8, gusting 9 winds we held our position although many cargo ships dragged quite alarmingly. The normal winds for this time of the year (November) are the "bora", a cold strong N.E. wind which funnels down the mountains and can develop suddenly to gale force. We had unusually strong and prevalent S.E. winds during 10 days at anchor.
Communications: Pilot station listens on VHF Channel 16 and works Channel 8. Rijeka Radio was very easily contacted on VHF and proved of great help in connecting with Agents, Owners and Charterers. Rijeka Radio not quite as good for contact on W/T as does not seem to follow the times for listening as laid down. R/T proved difficult as well, due to his frequencies being same as other main radio stations.
Port Officials: Agent and boarding party boarded morning after arrival and cleared ship with very little difficulty, only normal representation required. Shore passes, made out by Agent, sent on board later same day. Permission to immobilise engines and lower lifeboats given by Harbour Master on arrival although this later cancelled due to approach of storm after 24 hours.
Shore Leave: It is possible to arrange for shore launches while at anchor to give shore leave but the service can be curtailed due to bad weather and in Winter could result in crew being stranded ashore. Last boat from the port being 2200 hrs. At the berth, no restriction on shore leave exists and there is an excellent bus service into Rijeka from the village of Bakar. Prices are comparable with UK and quality of goods similar. In Bakar itself is an excellent restaurant, family owned, which serves first class food in very nice surroundings. The Owner speaks perfect English.
Fresh Water: At anchor, limited water is available by tug but very expensive. On the berth, good quality water is readily available in any quantity required.
Bunkers: Both intermediate and diesel oil is available by barge, price unknown but thought to be above average. Normally ships taking large quantities of bunkers would bunker at Augusta, Sicily.
Stores: Storing poses a problem due to several points. The access to the ship on the berth is difficult for large lorries as the extension to the wharf carried out over the past 3 years has wrecked the approach road to the face of the wharf and also the lorries if they make it to the wharf cannot get close alongside due to the conveyor belt and rails.

Storing at the anchorage also poses problems as there are no barges suitable for carrying large amounts and launches were used to bring the stores out to the ship but these can only carry a small quantity at a time. We had to load some large and heavy pieces of engine spares which had been sent from UK by lorry and these were transferred to a pontoon barge for delivery to the ship.

Crew Changes: Personnel were routed through Zagreb* mainly and this entailed a 4 hour drive from the airport to the ship, although it is possible to send people via Trieste which is a bit nearer. On arrival at Rijeka they have to see Immigration and are issued with shore passes. Wives and children should be entered on a passenger list and not included on the crew list as they get a special pass for 90 day entry.

*Whether this is normal routeing or was Company's choice is not known.

Cargo Handling: Berth has been extended and depth alongside increased to allow vessels drawing 17.5 m. to safely lie alongside although the 48 ft. 6 in. rock which was found previously at the Eastern end of the berth is still there according to the Pilot. (Approximate position of rock about 50 ft. off wharf and about 250 ft. from Eastern end). Berth is left in a very broken down looking state and lacks decent mooring posts at the Western end. Cargo is handled by 3 grabs (although only 2 were in use this call) 1 very large and the other 2 much smaller. Discharge rate on this call was averaging 30,000 t.p.d. with the major share being done by the larger grab which is at the Western end of the wharf. Cargo is either taken directly away by ore trains (if iron ore) or dumped onto back of wharf, or, if coke is taken direct to a coking factory on the other side of the bay by a covered conveyor belt. Storage or dumping facilities are very limited and this has a controlling effect on the discharge. When discharging iron ore, if insufficient trucks arrive and the stockpile is full, then discharge is on a stop/go basis and slow and also fully dependent on the trucks arriving regularly. This ship discharged 149,320 tonnes in 6 days as against a previous call experienced when 118,100 tonnes were discharged in 6.7 days. Maximum airdraft 16.5 m. on berth.

Stevedores were good and co-operation was good. Any damage caused was repaired before departure without causing any delay to the ship and the standard of repair was good.

Repairs: Besides the "3 MAJ" shipyard, there are quite a few smaller yards and workshops where repair work can be arranged.

Medical: There is a special clinic for seamen which opens at 1200 hrs. In attendance at that time is a general doctor who refers patients to the different specialists and usually entailed a visit next day to see those people.

Customs Allowances: On arrival, each man allowed 200 cigarettes and 0.5 litre wine/spirits during stay. Customs would allow an issue every 5 days of 200 cigarettes per man and 8 bottles of spirits for the ship.

SHIPMASTER'S REPORT: Rasa: October 1984.

Location: Lat. 45° 01.6′ N., Long. 14° 03.2′ E.

Documents: Same as Rijeka.

Pilotage: 48 and 24 hours' notice of ETA must be given to Agent. Pilot boards vessel off Traget Point (Lat. 45° 01′ N., Long. 14° 03.5′ E.). Sometimes Pilot boards off Ubas Point (Lat. 44° 56′ N., Long. 14° 04′ E.) by special arrangement. Pilot on VHF Channel 16.

Approaches: For obtaining Pilot off Traget Point, necessary to navigate through Zaliv Rasa Strait. This passage is easy during daytime, using the middle of the channel.

Anchorages: Off Traget Point with good sandy bottom and depths from 10 m. to 12 m.

Tugs: Not available.

Berthing: For berthing Pilot uses the starboard anchor for turning the vessel. There are 2 berths, 1 for loading livestock and 1 for loading general cargoes and special lumber from Austria. This berth is about 200 m. long with a depth of 10 m.

Cranes: 3 shore cranes of 5 tons and other equipment is available.

Stevedores: Port Enterprise "LUKA" is the sole stevedoring company. Working 2 shifts from 0730 – 1400 hrs. and 1500 – 1900 hrs. Saturdays, Sundays may be worked on overtime. Loading rate 2,500 cu.m. of lumber per day. (approx.)

Fresh Water: Available from quay.

Cargo Gear: Stevedores use shore cranes and ship's gear together.

Repatriation: Possible by bus to Rijeka or Pula and then by air or train.

Airport: Nearest airport at Pula.

Time: GMT plus 1 hour.

Identification Cards: Shore passes issued.

Telephones: Near to the berth through telephone centre.

INSERT SMR DATED AUGUST 1987.

AUTHORITY: Lucka Kapetanija (Harbour Master's Office), Obala 10, Rujna 3, 51000 Rijeka. *Tel:* 37-917 *FAX:* (051) 38189 *Cables:* Kapetanija Rijeka. *Contact:* Mr. Ivica Simic, Operations Security Chief. *Tel:* 39-415.

AGENT: Jadroagent – Rijeka, Obala J.R. Mornarice 16, 51000 Rijeka, Cable: Jadroagent Rijeka, Telex: 24100Yu Jadrag, 24268Yu Jadrag.

SIBENIK: 43.44 N. 15.53 E.

DOCUMENTS/HEALTH/HOLIDAYS: Same as "Rijeka".

PILOTAGE: Compulsory for vessels over 500 g.r.t. Pilot boards vessel at the entrance of St. Ante Channel, within a circle of 3 miles radius from Jadrija Lighthouse.

ANCHORAGE: Vessels waiting Pilot must anchor between Prvic Island and the shore if coming from the West, or between the South point of Zlarin and the shore if coming from the East, all in depths of 22 m.

In the Bay of Sibenik, vessels may anchor on the N.W. side of St. Ante Channel in depths of 30 m. – 40 m.

RESTRICTIONS: All vessels over 50 g.r.t. must apply for permission to enter St. Ante Channel by using International Code Signal "Z" by flag during daylight hours and a white light above a red light visible 2 miles all round or a sound signal (letter "Z" of morse code) during night hours. Vessels may enter channel only when authorised by a signal, 2 black balls vertically disposed by day or 2 green lights vertically displayed by night, made by the signalling station at Jadrija.

MAX. SIZE: Only draft limited. 33 ft. alongside in deepest berth.

VHF: Pilot has VHF available and maintains listening watch on Channel 14.

RADIO: None. Vessel may call Agent through Rijeka Radio and Split Radio.

TUGS: 1 of 750 h.p.

BERTHING:

Obala JRM: Length 274 m., draft up to 7 m. – no shore cranes.

Gat Vrulje: East side length 132 m., head 114 m., West side length 101 m., draft up to 9 m. – no shore crane. Equipped with conveyor belt for loading bulk fertilisers.

Obala Dobrika: Length 225 m., depth 10 m.

Obala Rogac: Length 432 m., depth 10 m. Cranes: 2×7 tons, 3×5 tons.

Obala Sipad: Length 294 m., draft up to 7 m. – no shore cranes.

Obala Crnica: Length 120 m., draft 7.5 m. – 1 shore crane – 8 tons.

Also see "Developments".

BULK CARGO FACILITIES: Ores and minerals (phosphate) at quays Rogac and Dobrika.

Obala Dobrika: Phosphate handling, capacity 400 t.p.h., storage capacity 1,000,000 tons.

STEVEDORES: Port Enterprise: "Luka" – Sibenik and timber stevedoring company "Sipad".

Port works in two shifts: 0700 – 1500 hrs. and 1500 – 2300 hrs. Overtime possible 2300 – 0700 hrs.

Timber operations normally performed during first shift only.

MEDICAL: Medical service available including hospitalisation.

DENSITY: 1010 – 1025, depending on place, season and weather.

FRESH WATER: Available from quay.

FUEL: Diesel and Gas oil in small quantities.

GANGWAY/DECK WATCHMEN: Available.

OPENING/CLOSING HATCHES: If not performed by crew, can be done by stevedores at additional charge.

CUSTOMS ALLOWANCES: About 40 cigarettes and 0.5 litre of wine/spirits per man per day.

CARGO GEAR: General cargo and timber are handled using ship's gear. Ore and minerals by shore cranes fitted with grabs.

IDENTIFICATION CARDS: Shore passes given by local police.

REPAIRS: Small repairs only.

REPATRIATION: By train or bus and by air from Split Airport nearby, or from Zagreb or Zadar.

TIME: GMT plus 1 hour. Summertime – GMT plus 2 hours (March-September).

POLICE/AMBULANCE/FIRE: Police, 92; Ambulance, 94; Fire, 93.

TELEPHONES: No facilities for placing telephone on board.

GENERAL: Lloyd's Sub-Agents – Jadroagent Sibenik.

SHIPMASTER'S REPORT: July 1986.

Pilotage is compulsory and available day and night. Pilot boards the vessel in the vicinity of red pillar light buoy (RF. 12s. 4M.) in approximate position Lat. 43° 42.8′ N., Long. 15° 51.1′ E. Pilots operate on VHF Channels 16 and 14.

The best anchorage is inside the South part of Sibenski Canal. We anchored in approximate position Lat. 43° 40.7′ N., Long. 15° 53.1′ E. The bottom is gravel, sand and algae.

There is a phosphate pier with silos on the quay (only one pipe available at present, plans to build another pipe during the next year) whose capacity is 6,500 tonnes per day. Maximum permissible draft for this pier is 32 ft. but it is especially important for Master and Chief Officer to know that on this pier, owing to insufficient depth a vessel even with a draft of 30 ft., cannot be berthed alongside. Vessel normally 2.0 – 3.0 m. from the quay. Berthed vessel is partly aground so draft survey will show signifiantly less cargo than that actually loaded. It is therefore recommended that draft is checked before Pilot boards and thereby check the actual quantity of cargo on board. Also Masters and Chief Officers must bear in mind that water is very brackish and density varies, so during draft survey density must be checked at various depths (recommended to check the density at depths 2.0 m., 6.0 m. and 9.0 m.) and at different locations.

Draft survey is made by Harbour Master on arrival and on departure and is very rigorous. A Yugoslav shipping company whose home port is Sibenik, lost a long term contract because of repeated loss of cargo due to Bill of Lading figures being different to draft survey figures.

Fresh water is available at the pier.

AUTHORITY: Lucka Kapetanija Sibenik, Obala Oslobodjenja 8, 5900 Sibenik. *Tel:* 059-24261. *Cables:* Kapetanija Sibenik. *Contact:* Captain Janes Lakos, Harbour Master.

AGENT: Jadroagent – Sibenik, Obala Oslobodjenja 9, 59000 Sibenik. Cable: Jadroagent Sibenik. Telex: 27323 Yu Jadrag. Tel: 22-570, 22-571 (After hours) 25-544.

SPLIT: 43.31 N. 16.26 E.

DOCUMENTS:

5 Crew Lists.
5 Passenger Lists.
2 Store Lists.
3 Personal Effects Lists.
3 Cargo Manifests.
3 Bills of Lading.
1 Health Declaration.

PILOTAGE: Compulsory for vessels over 500 g.r.t. If vessel bound for Split, Dugi Rat or Trogir, Pilot will normally meet vessel 0.5 miles off the City Port Entrance, day or night, but on request Pilot will board a vessel S.W. of Razanj Lighthouse (Lat. 43° 19′ N., Long. 16° 25′ E.).

A vessel bound for Trogir may also take a Pilot 0.5 miles off Galera Light (Lat. 43° 28.4′ N., Long. 16° 11.5′ E.).

It is advisable to contact pilot station on VHF Channel 8, or via Split Radio on Channel 16, prior to arrival.

A vessel awaiting a Pilot can anchor South of City Port Breakwater.

ANCHORAGES: Vessels can anchor S.E. of City Port Entrance, 0.5 miles off the breakwater, in 40 m. depth, muddy bottom.

In case of very strong S.E. wind it is recommended to anchor in Southern part of Luka Milna (Lat. 43° 20′ N., Long. 16° 26′ E.) in 25 m. to 30 m. depth, sandy bottom.

RESTRICTIONS: Large tankers are handled in and out of the harbour during day time only. LPG carriers also enter port in day time only.

MAX. SIZE: No restrictions except draft. Maximum permitted draft for passenger ships in City Port (Southern Basin) 8.8 m.; in Northern Port for general/bulk cargoes 10.6 m. but for grain (Silo Quay) 11.3 m. and for oil tankers 11.9 m.

HEALTH: To obtain Pratique, Health Declaration required. In event of any disease or fever contact Agents.

RADIO: All messages to Agent via Rijeka Radio (on HF), or via other Yugoslavian Coast Stations on MF radio telephony or MF radio telegraphy and VHF.

Answers to messages via Rijeka Radio only.

VHF: Split Radio Channel 16 (permanent watch). Pilot station Channel 8 (listening watch from 0700 hrs. to 2000 hrs. local time), tugboats on Channel 14.

TUGS: Normally ship's lines used. If tug's lines used 10% extra is charged.

BERTHING:

Northern Basin:

Northern Port: Continuous quay of total length 870 m. divided into 5 berths with the following permissible ship drafts: Berth No. 1, 8.5 m. Berth No. 2, 9.7 m., Berth No. 3, 7.3 m., Berth Nos. 4 and 5, 10.6 m., where general and bulk cargoes handled, mostly by shore equipment.

Cement factory "Partizan", Kastel Sucurac, length of quay 222 m., draft 8.2 m., cement in bulk mostly loaded.

Cement factory "Prvoborac" Sv. Kajo, quay length 274 m., draft 8.2 m., cement in bags only loaded.

"Jugovinil" factory Kastel Sucurac, quay length (dolphins) 80 m., draft 9.7 m., for LPG carriers only.

Silo Quay, Vranjic, length 110 m., draft 11.3 m., discharging/loading grain by multiport.

A. Vucicic factory, Vranjic, quay length 262 m., draft 7.3 m., where discharging asbestos and loading asbestos products. Shore crane and ship's gear used.

Southern Basin (City Port):

Breakwater Quay, length 230 m., draft up to 8.8 m.

Gat Spanjolskih Boraca (ex-Sv. Duje), total quay length 465 m., draft up to 7.9 m.

Gat Proleterskih Brigada, total quay length 350 m., drafts from 3.9 m. to 7.0 m.

City Port serves passenger ships and car ferries only.

CRANES: *Northern Port:* 2×7 tonne bridge cranes and 4×5 tonne gantry cranes. Floating crane of 60 tonne lifting capacity also available.

BULK CARGO FACILITIES: One quay (Silo Quay, Vranjic), length 110 m., draft 11.3 m. Max. height of discharging gear above sea level is 8.0 m. Max. loading/discharging rates 3,000 – 5,000 tonnes.

SPECIALISED CARGO HANDLING FACILITIES: One berth for LPG carriers (Jugovinil Factory Berth).

STEVEDORES: "Lucki prekrcaj i skladista" is the sole stevedoring company. Work in two shifts from 0600 – 1300 hrs. and from 1300 – 2000 hrs.

MEDICAL: No advance notice except in case of serious illness to be included in arrival cable. Hospital facilities available.

TANKERS: Two discharging berths alongside the quay. Discharge lines 6 in., 8 in. and 10 in.

Berth for small tankers, length 80 m., draft up to 7.0 m.

The other quay, length 150 m. (dolphins) and permitted draft 11.9 m.

Depending on type of cargo, average load/discharge rate is from 300 – 600 tonnes per hour.

DENSITY: Average density 1025.

FRESH WATER: Available at all berths. Order through Agent.

FUEL: Obtainable. Advance notice required.

CONSULS: Denmark, Italy, Netherlands and United Kingdom.

REPAIRS: All types of deck and engine repairs possible.

DRY DOCKS: One floating dock at Trogir, length 180 m. and one at Northern Basin, length 116 m.

SURVEYORS: Jugokontrola, Jugoinspekt, Jadroinspekt (Cargo Inspectors).

Lloyd's Register, American Bureau, Bureau Veritas and Jugoregister representing DNV, NKK and GL, Panama, etc.

GANGWAY/DECK WATCHMEN: Not necessary.

OPENING/CLOSING HATCHES: Stevedores or ship's crew whichever to ship's advantage.

CUSTOMS ALLOWANCES: About 40 cigarettes and reasonable amount of wine/spirits for each crew member daily.

CARGO GEAR: Load/discharge mostly effected by shore gear.

REPATRIATION: All facilities available for crew changes.

AIRPORT: City centre to airport 23 km. 3 flights daily to Zagreb and Belgrade. From April 1st to October 31st direct flights to Rome, Paris, London and Zurich.

TIME: GMT plus 1 hour. Last Sunday in March clocks advanced 1 hour. Last Sunday in September clocks retarded 1 hour.

HOLIDAYS: January 1st, 2nd; May 1st, 2nd; July 4th and 27th; November 29th, 30th.

POLICE/AMBULANCE/FIRE: Police, 92; Ambulance, 94; Fire, 93.

SERVICES: Compass adjusting, radio/radar services and calibration of DF, divers for surveys/repairs, Lloyd's Sub-Agents (Jadroagent-Split), ship's laundries.

SHORE LEAVE: No restrictions.

IDENTIFICATION CARDS: Shore passes issued.

AUTHORITY: Lucka Kapetanija, Obala Lazareta 1, 58000 Split. *Tel:* Split 48-062. *Telex:* 26496 (Yu Kap St).

"Luka Split", Gat Spanjolskih Boraca, 58000 Split, Yugoslavia. *Tel:* Split 589-299.

ZADAR: 44.07 N. 15.14 E. (See Plan)

DOCUMENTS/HEALTH/HOLIDAYS: Same as "Rijeka".

PILOTAGE: 48 and 24 hours' notice of ETA must be given to Agent. According these notices Agent arranges for Pilot to board on arrival. Pilot boat blue motor launch with large "P" on bow and "H" flag. Pilot contacted on VHF Channel 12 or 16.

ANCHORAGES: About 0.5 mile, 245° from green port light, (Fl. G. 2 sec.) on the North part of Zadar Peninsular. Average depth about 40 m.

MAX. SIZE: Zadar, old passenger port, permissible draft 6.25 m. (20.5 ft.) Zadar-Gazenica, port for dry cargo, max. draft forward 6.60 m. (21.7 ft.) Aft 11.0 m. (36 ft.). Also see "Tankers" and "Berthing".

RADIO: Rijeka Radio, "YUR" or Split Radio "YUS".

VHF: Information/Operations Centre Zadar listens on VHF Channel 16 working Channel 07. Pilot listens on Channel 16 or 12.

TUGS: 1 tug 1,200 h.p. Large vessels use 2 tugs, with the additional tug coming from Split. Tugs normally join 200 m. – 300 m. from breakwater, vessel's lines usually used.

BERTHING: *Zadar Old Passenger Port:* Mainly used by coastal passenger traffic and cruise ships.

Zadar – Gazenica Cargo Port: Berth No. 1: Length 160 m. Draft from 6.6 m. fore to 11.0 m. aft.

Berth No. 2: Length 145 m. Draft 8.5 m.

Soya Bean Berth: Length 140 m. Draft 12.0 m. 1 berth for discharge of soya beans and grain, rate 400 t.p.h.

CRANES: Heavy lift shore crane, capacity 100 tons.

STEVEDORES: Number of gangs required to be stated in usual notice of ETA.

MEDICAL: Advance notice not necessary, hospital facilities available.

TANKERS: Gazenica Port: 1 tanker berth max. draft 10.35 m. (34.1 ft.) forward, 15.0 m. (49.2 ft.) aft. Length of the ship is not restricted.

Floating barriers/booms compulsory for vessels loading/discharging mineral oils.

DENSITY: Average density in the port – 1026.

FRESH WATER: Connections on piers, rate of delivery 8 – 15 t.p.h.

FUEL: Fuel available for coasters only.

GANGWAY/DECK WATCHMEN: Not necessary.

OPENING/CLOSING HATCHES: Normally, but not compulsorily, carried out by stevedores.

CUSTOMS ALLOWANCES: 200 cigarettes per person. Tobacco and liquor sealed in bond.

IDENTIFICATION CARDS: Needed. Issued by police.

CONSULS: None.

REPAIRS: Deck and engine repairs possible.

REPATRIATION: Facilities exist for effecting crew changes and arranging necessary repatriations.

AIRPORT: Zadar airport served by regular daily flight for Zagreb with connection on all international flights.

DRY DOCK: 2 floating docks, 8,500 and 2,000 tonnes lifting capacity on Ugljan Island.

TIME: GMT plus 1 hour. Summertime kept.

POLICE/AMBULANCE/FIRE: Police, 92; Ambulance, 94; Fire, 93.

TELEPHONES: No facilities for placing telephones on board.

AUTHORITY: Lucka Kapetanija – Zadar. Radnicka Obala 8, 57000 Zadar, P.P.182. *Tel:* 337-58, 223-44, 337-78. *Telex:* 27163 Yu Kap Zd. *Cables:* Lucka Kapetanija Zadar.

AGENT: Jadroagent, N. Nodila b.b., 57000 Zadar. Tel. 23210, 23215. Telex: 27129 Yu Jadrag. Telegrams: Jadroagent Zadar.

ZELENIKA: 42.27 N. 18.35 E.

DOCUMENTS/HEALTH: Same as "Rijeka".

PILOTAGE: Pilot boards at entrance of the Bay of Kotor, near point Punta Ostro. In bad weather Pilot boards at anchorage.

ANCHORAGE: Good ground for anchorage S.W. of Zelenika, about 0.25 miles off port light in about 27 fathoms.

MAX. SIZE: Port of Zelenika damaged by earthquake and temporarily closed, vessels berth at the passenger quay at Herceg-Novi.

HEALTH: Radio Agent requesting Free Pratique, 24 hours before arrival. For vessels over 500 g.r.t. Pratique is given at the anchorage. For small ships and yachts, Pratique is given at Herceg-Novi.

TUGS: None. In cases of necessity can be ordered from shipyard at Bijela.

BERTHING: The berth is assigned through the Agents giving notice 24 or 48 hours in advance. At present there is berthing for small ships only at the passenger port at Herceg-Novi.

STEVEDORES: State stevedoring company.

MEDICAL: Nearest hospital at nearby town of Herceg-Novi.

FRESH WATER: Available from hydrant on the passenger quay at Herceg-Novi.

FUEL: Nearest bunker station is at Bar.

OPENING/CLOSING HATCHES: If not performed by crew, can be done by stevedores.

CUSTOMS ALLOWANCES: About 40 cigarettes and 0.5 litres wine/spirits per man per day.

CARGO GEAR: Loading, unloading performed with ship's gear.

IDENTIFICATION CARDS: Shore passes issued by local police.

CONSULS: None.

REPAIRS: Any kind of repairs including dry docking at nearby shipyard at Bijela.

DRY DOCKS: Floating dock lifting capacity 10,000 tons, LOA 184 m., length over keel blocks 165.6 m., inside free breadth 25.5 m.

Floating dock lifting capacity 33,000 tons. LOA 252 m., length over keel blocks 235 m., inside free breadth 44 m.

The yard is about 4 miles East of Zelenika. The yard has 1,300 m. of fitting pier.

REPATRIATION: By bus to Dubrovnik, and from there bus, plane or ship to main cities in Yugoslavia.

TIME: Central European Time. GMT plus 1 hour. Summertime kept.

HOLIDAYS: January 1st and 2nd; May 1st and 2nd; July 4th and 13th; November 29th and 30th. Work can be arranged on Sundays and on 2nd day of two-day holidays.

POLICE/AMBULANCE/FIRE: No direct connection, in case of necessity call Agency, Tel. (082) 81-456 Jadroagent or (082) 81-261 Jugoagent.

SHORE LEAVE: Allowed.

AUTHORITY: Lucka Ispostava Zelenika.

ADD S.M.R SEPT '87

AGENT: Jadroagent, Medunarodna pomorska i saobracajna agencija, Poslovna jedinica, Bijela. Tel: (082) 81-456. Telegraphic address: Jadroagent Bijela.

NOTES

Please also advise Shipping Guides Ltd.

Zaire Republic

GENERAL:

ETA: It is essential that any change of vessel's ETA should be transmitted sufficiently in advance in order to avoid short shipments of cargo.

Matadi is only a transit port where cargo is not stored in order to avoid congestion.

Imported cargo is immediately re-forwarded to the interior while export cargo is only brought to Matadi a few days before the ETA of the vessel for which it has been booked.

Therefore, in order to make the cargo available at Matadi, shippers need a notice varying according to the cargo concerned, but which cannot be less than 2 weeks as is the case for coffee.

Agents at Matadi and Boma have been instructed to inform Port Authorities latest 4 days before berthing of inward cargo tonnages.

Non compliance with this provision may result in berthing delay.

PILOTAGE: Vessel should cable ETA 24 hours before arrival to the Harbour Master. Cable address: "Maritime Banana" via Banana Radio.

Pilotage compulsory for all vessels over 500 g.r.t. bound for Boma and Matadi.

Ships bound for Matadi and/or Boma must take a Pilot at the pilot station at Banana (at the mouth of the Zaire River). Pilot station at Banana can be contacted directly by radio (VHF).

In order to increase the safety and to facilitate the navigation on the river the Regie des Voies Maritimes have decided that in case a vessel is not equipped with a VHF installation the Pilot will bring one on board, for which a charge is made.

The following rules must be observed at the request of the Regie des Voies Maritimes for embarking and dis-embarking of Pilots.

If gangway is rigged astern on the port side it is compulsory to use the pilot ladder.

If gangway rigged amidships on port side it is recommended that the pilot ladder is used in combination with the gangway.

Pilots requesting only the gangway do so at their own risk.

Theoretically sailing from Matadi/Boma is only authorised if vessel can reach Banana by 1800 hrs. at latest since navigation on the Zaire river is normally limited to daylight hours.

With regard to the trim the pilotage services ask Masters to comply with following rules:

Maximum draft 13 ft. aft; 4 ft. forward.

DOCUMENTS: *Ship's Documents required on arrival:*

Clearance from last port.
7 Crew Lists.
3 Lists of Arms and Ammunition.
7 Passenger Lists.
1 List of stowaways.
2 Crew Declarations.
3 Lists of Ports of Call.
2 Stores Lists.
1 International Tonnage Certificate.
1 International Load Line Certificate.
1 Derat Exemption Certificate.
1 Cargo Ship Safety Equipment Certificate.
1 Certificate of Registry.
1 Radiotelegraphy Certificate.
1 Construction Certificate.
1 Certificate Form on Board.
Free Pratique.

Documents required for disembarking passengers and discharging cargo:

A. To be received by mail at least 8 days before ship's arrival:
(1) Cargo:
- 3 Freight Manifests
- 8 Cargo Manifests
- 5 Copies of Bills of Lading
- 6 Copies of Stowage Plans.

(2) Passengers:
- 1 Accountancy
- 3 Passenger Lists, for passengers for the port/or in transit.

B. To be received by ship's bag at ship's arrival at quay:
(1) Cargo:
- 1 Freight Manifest
- 4 Cargo Manifests
- 3 Copies of Bills of Lading.

(2) Passengers:
- 1 Freight Manifest
- 4 Passenger Lists for passengers for the port and/or in transit.

It is most important that stowage plans be available before vessel's arrival. Vessel's operations are indeed delayed to the next shift if same are only remitted upon arrival.

DRAFTS AND CURRENTS: Drafts on River Zaire are presently as follows (March 1987):

Inwards: High Water: 22 ft. 00 in.
Outwards: High Water: 23 ft. 00 in.

The authorised drafts are notified regularly by the Port Authorities.

The currents of the river and from berth to berth as well as in Matadi and Boma vary and depend upon the high and low levels of the water sometimes with adverse currents and still waters.

For proceeding to Matadi and according to the season vessels must have a speed of at least 10.5 to 11 knots, especially to pass the "Devil's Cauldron" about 3 miles before Matadi. 12-13 knots or greater sometimes requested for a 10-15 minute period.

BRIDGES: *Bridge on River Zaire:* The Port Authorities and Bridge Constructors request vessels to whistle 3 times:

(a) when proceeding to Matadi at about 300 m. before passing the bridge.
(b) when sailing from Matadi at about 200 m. before passing the bridge.

This will enable constructors to stop work to avoid the falling of any kind of object on vessels when passing the bridge.

HEALTH: Ship's crew must have an International Certificate of Vaccination against yellow fever and cholera.

RADIO: Banana Radio 9PA.

Telegraphy – medium wave: 0430 – 2030 UTC.
500 kHz.
Working frequency: 489 kHz.
Listening frequency: 480 kHz.

512 kHz.
Traffic list each hour + 00 of each hour during service hours.

Telegraphy short waves: 0500 – 2000 UTC.

Traffic list at:
0500/0700/0900/1100/1600/1900: 8445.0 kHz
0600/0800/1200/1400/1700 : 12660.0 kHz
1000/1300/1800 : 22431.0 kHz
1500 : 17184.8 kHz

Reserve frequency for medium wave: 6491.5 kHz

Remark: This frequency is used for traffic when QRN appears on 489 kHz.

Reserve frequency: 8546 kHz.

Listening on 8, 12 and 16 MHz, Channels 5, 6 and 15. On 22 MHz, Channels 3, 4 and 9.

Each Channel is monitored during 1 minute in a scanning system and this, during 15 minutes following traffic list (same frequency band as traffic list) after 15 minutes, the receiver is blocked on Channel 6 (4 on 22 MHz) until next traffic list.

Telex on Request

Paired frequencies:
Code 34646 (This is not definite since it must be allocated by UIT).

9PA:	8714 kHz	Ship:	8353 kHz
	13078.5 kHz		12498.5 kHz

Telephony: 0430 – 2030 UTC

Listening: 2182 kHz
4125 kHz
6215.5 kHz
8257 kHz
12392 kHz

Telephony Short Wave: 0430 – 2030 UTC.

Traffic list at:

0430/0630	on 6521.9 kHz	– listening 6215.5 kHz.
0530/0830/1030/1530	on 8753 kHz	– listening 8257 kHz.
0730/0930/1430/1930	on 4419.4 kHz	– listening 4825 kHz.
1130/1630	on 13162.8 kHz	– listening 12392 kHz.
1230/1730	on 17294.9 kHz	– listening 16522 kHz.
1330/1830	on 22658 kHz	– listening 22062 kHz.

Telephony VHF: 0430 – 2030 UTC.

Channel 16. Simplex Channels. Duplex Channels.

Remarks:

1. Telephone connections are possible and Agent accepts telegrams in telephony.

2. Other available frequencies for telephony:

Banana Radio/9PA	*Ship*
4357.4 kHz	4063.0 kHz
4382.2 kHz	4087.8 kHz
8777.8 kHz	
8762.3 kHz	8238.4 kHz
13181.4 kHz	12410.6 kHz
17350.7 kHz	16577.8 kHz

3. Radio beacon continuously.

Frequency: 315 kHz.
Call Sign: BAN.
Position: Lat. 05° 53′ 24″ S., Long. 12° 17′ 48″ E.
Power: 1kW.
Antenna: Omni-directional.
Range: 30 miles (daylight).

FUEL: Must be ordered from Petrozaire at least 48 hours before required. Normally supply of gasoil, light and heavy fuel is effected at Banana between buoys 12 and 14 ex-barges with: minimum quantity – 250 tons; maximum quantity – 800 tons (total barge quantity).

Smaller quantities can also be supplied in Matadi or Ango Ango.

STEVEDORES: The ONATRA (Office National des Transports) – public institution, has the monopoly of the handling, stevedoring and transit operations at the ports of Matadi and Boma.

At each berth the responsible "Pier Master" remains in constant contact with the Chief Officer during the whole operation.

Working shifts are as follows: 1st. shift: 0630 – 1430 hrs.; 2nd shift: 1430 – 2230 hrs. overtime; 3rd shift: 2230 – 0630 hrs. overtime.

Work must be ordered the day before vessel's arrival. However, if gangs are available, work can still be ordered the day of vessel's arrival but latest at 0930 hrs. during week days.

In principle no work is done on Sundays, holidays and during the night. If required same has to be ordered by writing 1 working day in advance before 1000 hrs. Port Authorities will then decide according to the situation at that time.

According to the situation of the Port, the Authorities can also order labour 24 hours per day Sundays and holidays included.

At Boma there is no third shift – however on special request, work can eventually be granted until 2400 hrs.

At Matadi work during third shift will only be ordered upon special request from vessel.

For all stevedoring operations the use of shore cranes/dock labourers is compulsory. It is only in particular cases such as handling of containers/"heavy lifts" or prolonged (electrical) breakdowns that Port Operators can authorise use of vessel's equipment.

GENERAL: *Quay Practices:*
The Zaire courtesy flag must be hoisted by foreign ships during daytime.

In view of the proximity of the town, the use of whistles, sirens and similar signals is forbidden.

Safety nets must be put between ship and quay at each of the working hatches and beneath the gangway.

No rubbish whatsoever may be thrown overboard.

Official Language:
The official language used by the Port Authorities and Administration is French.

Cargo plans:
According to ONATRA's instructions, stowage plans of ships calling at Matadi/Boma must be issued in such a way that they show clearly where all goods loaded for Matadi/Boma in several ports are located. This enables ONATRA to have, at once, a clear view of each vessel and to study, before ship's arrival, the discharging/loading possibilities.

Those stowage plans must reach Agent before ship's arrival.

Vessel's loading/discharging operations will only start during the next shift if stowage plans are remitted upon vessel's arrival. A request can be made to shift the vessel to a more convenient berth depending upon the cargo concerned.

With regard to cargo loaded, ONATRA does not issue stowage plans and Masters should consequently be instructed to draw up stowage plans themselves for transmission to corresponding discharging ports.

It is customary not to moor ships at Matadi/Boma between 2200 hrs. and 0600 hrs. They remain at anchor.

Important Notices:
In connection with manifests for Matadi/Boma cargo:

1. Liner Terms Cargo:

According to the General Rules and Tariffs stowing, unstowing, loading, discharging rates are applied on weight/measurement, whichever is the highest irrespective of the freight unit.

The Port Authority ONATRA instructs therefore that:

a) The freighted manifest remitted to them must show three columns detailing respectively weight and volume and freight unit (freight tons) of each cargo/bill of lading.

b) At the bottom of each page a summing up of tonnage/weight, tonnage/volume and freight units (freight tons) should be mentioned.

c) The last page of the manifest shall contain a separate recapitulation of weight tons, volumes and freight units (freight tons) showing thus the respective totals of each item.

Corrections or additionals added by the Agent at Matadi/Boma by hand or with typewriter are not accepted by ONATRA.

ONATRA is fully implementing the regulations and, for vessels whose manifests are incomplete or incorrect, a penalty, which may reach 1,000% of the stevedoring costs (or 10 times) is charged.

2. F.I.O. Cargo:

The same information is to be supplied as for Liner Cargo but, in addition, the manifest and B/L must clearly mention that cargo is carried on free out terms.

BANANA: 06.01 S. 12.25 E.

DOCUMENTS: See "General" before first port.

APPROACHES: In view of the strong current, and in view of the fact that the lights of the navigation buoys on the river do not always work properly, night navigation is practically impossible. Tankers, therefore, arriving at night, or in times of congestion, are recommended to anchor approx. 5 miles West of Moita Seca Light in approx. 10 fathoms, about 12 miles from Stella Buoy.

PILOTAGE: River can be entered direct from sea in deep water. Pilot (Not compulsory) will board vessel from 0600 hrs. with Authorities off Stella Buoy (Outer navigation Buoy No. 2) located in position:

Lat. 6° 02′ 00″ S.
Long. 12° 22′ 30″ E.

The position of the flare of the SOCIR Refinery at Moanda is:

Lat. 5° 57′ 51″ S.
Long. 12° 25′ 07″ E.

The flare is visible during day and night and may be a good bearing for vessels approaching river.

Sailing from "Stella Buoy" at 0600 hrs. vessels with a speed of up to 14 knots must pass Bulabemba before 1400 hrs. and vessels with speed in excess of 14 knots by 1500 hrs.

MAX. SIZE: Tankers up to 35 ft. draft may discharge at buoy moorings. Also see "Berthing – Commercial Port".

HEALTH: Quarantine Officer boards at sea buoy. Free Pratique usually granted as soon as Maritime Health Declaration completed. Valid cholera and yellow fever inoculations required for all crew members.

RADIO: *Tankers:* At least 3 days' notice required to Agent (ETA and draft only) and to Harbour Master, "Maritime Banana" (ETA only). It is necessary to transmit these notices via another shore station (e.g. Cape Town Radio, Libreville Radio, etc.), as the Banana Radio Station can only be reached 2 days prior arrival. Close advice on changes in ETA necessary to prevent delays in waiting for Pilot and lighters.

Radio Banana (9PA) – see "General" before first port for details.

BERTHING:
Commercial Port:
The commercial port consists of a landing space of approximately 2,000 sq.m. in front of a warehouse with approximately 2,500 sq.m. storing room.

ONATRA, the Port Authority, has no cranes and the port equipment is extremely limited. Any discharging and/or loading must therefore be done by ships' gear.

With a draft of more than 17 ft. (indicative) cargo operations to be performed at anchor between Buoys No. 12 and No. 14. Barges and gangs are then supplied on request.

With a draft of less than 17 ft. (indicative) vessel can berth at ONATRA wharf inside Banana Bay.

Length of the wharf: 75 m.

DENSITY: Brackish to salt.

FRESH WATER: Not available.

FUEL: Must be ordered 48 hours in advance from Petro-Zaire. Bunkering takes place between Buoys Nos. 12 and 14. Gasoil, light and heavy fuel oil available. Barge capacity 800 tons, minimum order 250 tons.

MEDICAL: Doctor available for emergency only. No dental or hospital facilities.

TANKERS: Tankers remain at anchor between Buoy Nos. 12 and 16 on the river, anchorage being agreed upon by the Master and the local suppliers' representative who will have received the advice of the Pilot. Since there is no mooring buoy and in view of the strong currents it is recommended to use both anchors while main engine to remain on standby.

Cargo Operations: Tankers discharge into/load from cargo barges moored alongside either side. These barges (three in total) have a capacity of 1,650 long tons or 2,050 cu.m. and can receive the cargo at a rate up to 400 t.p.h. Under normal conditions the refinery will handle these barges per shift of 12 hours. Cargo operations are effected continuously day and night during Sunday and holidays, in shifts from 0600 – 1800 hrs. and from 1800 – 0600 hrs.

Sailing: Tankers sail without Pilot and may leave any time.

Moanda Terminal: To notify his arrival, Master to call mv "Afran Zenith" by radio. Vessel will then proceed to single buoy mooring berth with following particulars:

Depth 57 ft.
Position: Lat. 5° 57′ 50″ S.
Long. 12° 08′ 19″ E.

where loading will take place.

The storage tanker is moored in position:

Lat: 05° 57′ 30″ S.
Long: 12° 06′ 00″ E.

No tank-cleaning facilities. Barge available for dirty ballast reception limited to 2,000 cu.m. per trip which occasionally and on special request can be put at disposal by the refinery.

Also see "Shipmaster's Report".

REPAIRS: No facilities.

HOLIDAYS: See "Matadi".

GENERAL: During stay of tankers at anchorage the discharge and/or loading operations are constantly supervised by representatives of the refinery, who are to be accommodated on board and to be provided with meals.

SHORE LEAVE: Shore leave is presently not allowed due to lack of communications; only in urgent cases a crew member may join one of the refinery tugs. There is no entertainment whatsoever ashore.

SHIPMASTER'S REPORT: September 1985.

Location: Moanda Oil Terminal is operated by the Zaire Gulf Oil Company. It is located about 10 miles offshore from Zaire. It consists of a SPM in position Lat. 5° 57′ 50″ S., Long. 12° 08′ 19″ E. in about 75 ft. of water. Crude oil is transferred to the export tanker at the SPM from the storage tanker "Afran Zenith" of 95,185 d.w.t.

Wind and Swell: Wind and swell are mostly from a Southwesterly direction with a heavy swell from March to September. The tidal range in the vicinity of the berth is 6.9 ft. The current in the area is a composite of the effect of the general Northwesterly drift and the outflow of the Zaire River. This results in a current of 3 – 4 knots or more in a Northerly at Westerly direction. In view of the foregoing, Masters of vessels calling at the terminal are advised that under no circumstances are engine repairs permitted within terminal limits.

Communications: Vessels bound for Zaire are required to advise their ETA:

(a) Via COMSAT to Master m.v. "Afran Zenith" GZOL 1242403; or
(b) Via telex or radiogram to the main office of the vessel's Agent in Kinshasa who will pass over the information to Zaire Gulf Oil Company (ZAGOC) and to their local office at Moanda.

ETA messages to be sent 72, 48 and 24 hours before arrival at the terminal and should contain the following information:

(a) Name of vessel.
(b) ETA in GMT (Zaire time is GMT plus 1 hour).
(c) Name of Master.
(d) Estimated arrival draft, fore and aft and displacement.
(e) Time for discharging clean ballast, if any.
(f) If vessel proceeding to any port(s) prior to Moanda and if so delays anticipated.

A 24 hour watch is maintained on VHF Channel 16 on "Afran Zenith" and contact is usually possible at a distance of 20 – 30 miles.

Dirty Ballast: No facilities exist for receiving dirty ballast and all tankers must arrive with clean ballast.

Cargo Information: Oil loaded at the Moanda Terminal is Zaire composite crude with an average API of 31.5. The loading temperature will vary from 80°F – 85°F and is fairly steady throughout the year. The loading rate is about 30,000 bbls.p.h.

Approach to Anchorage/Mooring Master Boarding Area: If vessel is required to anchor, the recommended tanker anchorage is within a circle 0.5 miles in diameter and its centre is located in a position 5 miles due West of the SPM. Owing to the presence of oil wells and submarine pipe-lines vessels should not enter into the area bounded by lines joining the following positions:

- (a) Lat. 05° 46.5′ S., Long. 12° 12.5 E.
- (b) Lat. 05° 49.5′ S., Long. 12° 09.0 E.
- (c) Lat. 06° 00.0′ S., Long. 12° 09.0 E.
- (d) Lat. 06° 00.0′ S., Long. 12° 18.0 E.
- (e) Lat. 05° 53.5′ S., Long. 12° 18.0 E.

The ZAGOC Mooring Master Boarding Area is 3 miles due West (Lat. 05° 57.30′ S., Long. 12° 06′ E.) of the storage tanker "Afran Zenith" or boarding will be at the anchorage as appropriate.

Accommodation: During vessel's stay at the terminal the Mooring Master, Loading Master, Agent, Surveyor and 4 men for the hose gang will stay on board.

Mooring Arrangements: Mooring operations are only undertaken by day under normal weather conditions. Unmooring operations can be undertaken at any time. The following preparations are required on the export tanker:

- (a) 4 mooring ropes, minimum length 220 m. and size 9 in., buoyant lines if possible e.g. polypropylene, in good condition.
- (b) 2 suitable heaving lines of appropriate length.
- (c) 2 mooring lines aft for securing a tug to realign the vessel to the buoy if necessary.

Hose Connections: 1×16 in. hose is connected to the ship's manifold.

Bunkers: Not available.

Fresh Water: Not available.

AUTHORITY: Office National des Transports, ONATRA.

AGENT: See "Matadi".

BOMA: 05.51 S. 13.03 E.

DOCUMENTS: See "General" before first port.

PILOTAGE: Port is situated on the right bank of river, about 44 miles above pilot station at Banana.

Radio "Maritime Banana" 24 hours prior arrival giving ETA at Banana and requesting Pilot. Sailing for Banana from 0600 hrs. till 1500 hrs. Sailing for Matadi from 0500 hrs. till 1600 hrs.

RESTRICTIONS: Depth at bar 30 ft. Permissible draft for navigating river varies between 20 ft. to 27 ft. according to local conditions and should be checked with Port Authority in advance.

HEALTH: Quarantine Officer boards on arrival. All crew members require valid cholera vaccinations and yellow fever inoculation certificates.

TUGS: 2 tugs of 200 and 300 h.p. available to assist berthing.

BERTHING: Total quay length 450 m. with 3 berths alongside. Depth of water at the quay 8 m. at low water. Maximum current at the berths is 3 knots.

STEVEDORES: See "General" before first port.

Port Equipment:

6 electric cranes on rails, capacity 3 – 6 tons.
2 steam cranes on rails, capacity 7.5 ton at 6 m. (5.0 ton at 10 m.).
5 banana conveyors.
1 electric crane, capacity 6 tons.
8 forklifts.
5 tractors and 40 trailers and carts.
1 Palmkernel elevator.
1 Automatic grab.
2 Hyster carry cranes.
7 barges, capacity 100 tons.
1 pontoon, capacity 75 tons.

FRESH WATER: Available from quays, not suitable for drinking.

FUEL: See "General" before first port.

MEDICAL: Doctors and hospital facilities available.

REPAIRS: No facilities.

HOLIDAYS: See "Matadi".

GENERAL:

Exports: Logs and timber, plywood, veneerwood, coffee, cocoa, rubber, bananas, palmkernels, oils, cakes, about 8.8% of the total exports of the Zaire.

Imports: Various. About 2.5% of the total tonnage imported into Zaire.

Current at Quays: The currents of the river vary from berth to berth and depend upon the low and high level of the water with sometimes adverse currents and still waters.

Maximum speed at high level: 3 knots.
Minimum depth at the lowest level: 8 m.

AUTHORITY: Office National des Transport – ONATRA.

AGENT: Socomexas S.P.R.L. Aven. du Zaire, No. 119/F., B.P. No. 122, Boma, Republique du Zaire. Telephone: 267.

MATADI, (including Ango-Ango): 05.49 S. 13.27 E.

(See Plan)

DOCUMENTS: 7 days before arrival of vessel the following must be in the hands of the Agent:

4 Manifests (detailing explosives, general cargo, heavy lifts).
3 Stowage Plans.
6 Copies of Bills of Lading.
1 Freighted Manifest.

On arrival:

Maritime Declaration.
Ship's Register.
3 Crew Personal Effects Lists.
2 Stowage Plans.
1 Freighted Manifest.
3 Lists of Ports of Call.
7 Passengers Landed.
7 Passengers in Transit.
5 Crew Lists.
5 Crew Boys Lists.
2 Provisions Lists.
4 Individual Manifests.

PILOTAGE: Compulsory for vessels over 500 g.r.t. Radio "Maritime Banana" 24 hours prior arrival giving ETA at Banana and requesting Pilot. Pilot boards at Banana Pilot station. Distance from Banana to Matadi about 75 miles. Sailing for Banana from 0600 – 1200 hrs. Sailing for Boma from 0500 – 1600 hrs.

RESTRICTIONS: Depth at bar 30 ft. Permissible draft for navigating Zaire River varies between 20 ft. and 27 ft. according to local conditions and should be checked with the Port Authority 3 days in advance. Berthing at Ango-Ango up till 1800 hrs. only.

MAX. SIZE: Controlled by draft in river. Max. draft Berth No. 1 is 23 ft. – 24 ft.

HEALTH: Quarantine Officer boards on arrival. All crew members require valid cholera and yellow fever inoculation certificates.

TUGS: "Inga" 850 h.p., "Boma" 250 h.p., "Banana" 600 h.p. and "Soyo" 220 h.p.

BERTHING: At Matadi. Total length 1,728 m.

Pier 1 – 149 m. Pier 6 176 m.
Pier 2 – 161 m. Pier 7 – 188 m. For full container vessels
Pier 3 – 155 m. Pier 8 – 149 m.
Pier 4 – 158 m. Pier 9 – 167 m.
Pier 5 – 156 m. Pier 10 143 m.
Minimum depth at Piers 8 and 10 is 10 m.
In addition there is a berth length 400 m. for barges.

At Ango-Ango: Length of pier 150 m. Presently used for discharging and loading flammable goods and explosives.

UNLOADING RATE: 800 tons to 1,000 tons of general cargo per day of 3 shifts.

CRANES:

44 Cranes (Electric and hydraulic) on rails	3 – 6 tons
1 Derrick Fixed	*50 tons (Pier 4)
1 Bridge Crane	5 tons
6 Electric Cranes	3 – 6 tons
2 Electric Cranes	10 tons
3 Electric Cranes	6 tons
1 Floating Crane	14 tons

*Actual capacity 34 tons.

BULK HANDLING FACILITIES: Palm oil is stocked by 4 companies in Matadi, 3 of which have pipe-lines to a main quay. The palm oil installations of CCP are at Ango-Ango where ships must berth at Sep Zaire pier. Vessels handling Sep Zaire cargoes are given priority at this pier and in case of unavailability of berth, palm oil would be loaded by barge of 260 tons capacity at Matadi.

Palm kernel oil is also loaded at Berth Nos. 2 – 9 and Palm Oil at Berth Nos. 2 – 8 in Matadi.

P.L.Z. (Plantations Lever au Zaire) capacity	13,450 tons
AMATO-Freres	3,700 tons
MADAIL	2,340 tons
C.C.P.	3,627 tons

Cereals discharged by suction at No. 9 Berth. Rate 1,000 t.p.h.

BARGES/EQUIPMENT:

Barges:

2 Pontoons N.T. 41 tons each
8 Pontoons N.T. 75 tons each
1 Lighter N.T. 91 tons
2 Lighters N.T. 99 tons each
1 Tankbarge N.T. 279 tons
19 Lighters N.T. 339 tons each
1 Lighter N.T. 438 tons
11 Lighters N.T. 487 tons each
1 Lighter N.T. 514 tons
1 Lighter N.T. 522 tons
10 Lighters N.T. 557 tons each
2 Landing craft 875 tons each

Equipment:

28 Tractors and 242 trailers and carts
71 Forklifts with a maximum capacity of 2,500 kilos
2 Roller bridges 30 tons
3 Fork conveyors
34 Platforms × 20 ft.
6 Platforms × 40 ft. (Unilock)
1 Pushwagon tractor
Grain Elevators (Midema)

DENSITY: Fresh water.

STEVEDORES: See "General" before first port.

TANKERS: Discharge at Sep Zaire pier at Ango-Ango or Matadi. If lightening necessary before berthing, this can be effected at Ramler Buoy, 17 miles above Banana. No tank-cleaning facilities. No fresh water.

FRESH WATER: Delivery aboard the ship through valves and at each pier. Maximum daily capacity 200 tons. Delivery takes place according to the quantity asked for and usually during night.

Delivery cannot be done at the loading berth of Sep Zaire at Ango Ango.

Suppliers need 48 hours' notice. It is therefore highly recommended that Masters cable their needs well in advance to Agent and/or through Owners.

FUEL: See "General" before first port.

MEDICAL: Doctors and hospital facilities available.
GANGWAY/DECK WATCHMEN: Recommended.
Piracy: Acts of piracy have taken place in the port.
REPAIRS: Small repairs possible at railway workshop.
HOLIDAYS: *Legal Holidays in Zaire – 1986:*

1st January	New Year's Day
4th January	Memorial Day
1st May	Labour Day
20th May	Anniversary of the M.P.R.
24th June	Money Day
30th June	Independence Day
1st August	Relatives' Day
14th October	Zaire Youth Day
27th October	Zaire Day
17th November	Army Day
24th November	Revolution Day
25th December	Christmas

GENERAL: *Currents at the quays:*

The currents of the river vary from berth to berth and depend upon the high and low levels of the water with sometimes adverse currents and still waters. Difference between high and low level of the river is approximately 5.50 m.

Maximum speed at high level: 6 knots.

Minimum depth at lowest level: Minimum 8 m. at low water and minimum 10 m. at low water at the new Kala Kala quays.

Exports: Logs and timber (plywood, veneerwood), coffee, cocoa, rubber, copal, bananas, manioc, groundnuts, palm kernels, oils, cakes, fibres, cotton and copper.

Port Equipment and Accommodation: Matadi is the only Zaire port handling the despatch of export products originating from the interior and the import of products destined to Zaire (excluding Boma which is of minor importance and only serves the Mayumbe area).

About 90% of the tonnage in – and outward goes through Matadi at the head of the S.N.C.Z. railroad from Matadi to Kinshasa. The latter locality being a handling and concentration centre of the goods directed to or coming from Matadi.

DEVELOPMENTS: Container berth to be rebuilt.
Report: May 1985.

Over a period of 2 years repairs will be carried out at Berth Nos. 5, 6 and 7. Berth No. 5 out of use in May 1986.

SHIPMASTER'S REPORT: January 1981.
Documents and papers required on arrival Matadi:

7 Crew Lists.
2 Maritime Declarations of Health.
4 Passenger Lists (even if nil).
4 Ports of Call Lists.
4 Arms and Ammunitions Lists (even if nil).
4 Narcotic Lists.
3 Stores Lists.
2 Crew Customs Declarations.
1 Vaccination List (Cholera/Yellow Fever).
1 Animal List. (even if nil).

Following documents have to be shown to the Port Authorities:

Classification Certificate.
Ship's Register.
Derat Certificate.
Certificate of Tonnage Measurement.
Cargo Ship Safety Construction Certificate.
Cargo Ship Safety Radio-telegraphy Certificate.
Cargo Ship Safety Equipment Certificate.
International Load Line Certificate.
The official Log Book of the vessel and the Articles.

The number of crew written in the crew lists will be checked with the entries in the Articles.

Shore Leave: Each crew member receives a shore pass without particulars, which has to be returned before departure of the vessel. Fines will be imposed if shore leave pass is lost.

SHIPMASTER'S REPORT: August 1982.

As far as I could ascertain the only point in the Congo River where one can expect currents of 12 knots is in the "Devil's Cauldron" between Matadi and Ango-Ango. The rainy season is Jan./Feb. and the dry season June/July. The average current in the rainy season is 4 knots and in the dry 3 knots.

Tankers and other vessels who clear at Banana generally must go through the same procedure again at Ango-Ango or Matadi. A complete set of papers is expected as though it is the first entry into the country.

☐ ALSO SEE BANANA – "SHIPMASTER'S REPORT DATED APRIL 1987

AUTHORITY: Office National des Transports – ONATRA, Port of Matadi. *Contact:* Mr. Mbelolo Bituemi-di-Kebi, Port Director.

AGENT: Socomexas, S.P.R.L., B.P. 83, Matadi, Republic of Zaire. Tel: 22.33 and 22.35. Cables: Socomexas. Telex: 20.415.

BULLEN BAY

CURACAO OIL TERMINAL

THROUGHPUT:	Transhipment	1,200,000 barrels per day
	Refinery import	250,000 barrels per day

JETTIES:
1 – 500,000 DWT tanker jetty
1 – 350,000 DWT tanker jetty
1 – 250,000 DWT tanker jetty
2 – 100,000 DWT tanker jetties
1 – 70,000 DWT tanker jetty
2 – Tugboat jetties

TOTAL TANK CAPACITY – 17,750,000 barrels

1 –	1,000,000 barrels capacity –	1,000,000
16 –	750,000 barrels capacity –	12,000,000
6 –	375,000 barrels capacity –	2,250,000
38 –	Small tanks capacity –	2,500,000

PIPELINES: Main track consists of 5 strings of 36" pipe. The jetties carry 2 strings of 36" pipe in a loop. The loading rate is up to 12,000 tons per hour. Tankers' discharge rate is up to 25,000 tons per hour.

DEBALLASTING: Capacity 4,000 tons per hour per jetty. Ballast treatment produces affluent of less than 20 parts per million (20 ppm) oil content.

TUG SERVICE: Two tugs of 4,500 h.p. with 50 tons bollard pull each. One tug of 2,500 h.p. with 35 tons bollard pull.

REFINERY AREA

NOTE:

1 No anchors to be used within shaded area (Except in emergency situations)

2 Discuss method of approach with Harbour office (Channel 14)

POLLUTION: A submersible oil boom has been installed enclosing the oil pier. Normally, the boom rests on the sea-bed, but when needed it will be raised to the surface using compressed air.

The oil boom and its system of anchorage will be damaged by vessels' anchors. In order to ensure that the oil boom is operable at all times, and to avoid expensive repairs, which will be charged to the ship responsible for the damage, great care should be taken in connection with manoeuvres along the Slagen pier, which will require the use of anchors.

The drawing of the pier shows the position of the oil boom and the anchorage system. Except for emergency situations, anchors should not be used within the shaded area.

All manoeuvres to and from berths should be discussed with the Harbour office (Slagen Harbour Radio, Channel 14). The Harbour Office will give you information regarding current strength and setting.

Approach to Berth 2, and Berth 3 if Berth 2 is not occupied, is facilitated by the fendered sliding front shown on the drawing.

Before anchoring tankers should contact Fahal Control on VHF 12 for a designated anchoring position.

In all cases tankers are required to anchor at least 2 miles West of Fahal Island and at least 2 miles clear fo the Omani coastline.

Note 1. Pilot will advise boarding position on V.H.F. radio prior to arrival.

2. Vessels should not enter prohibited area unless accompanied by Pilot. If proceeding to anchorage pass northward of Fahal Island.

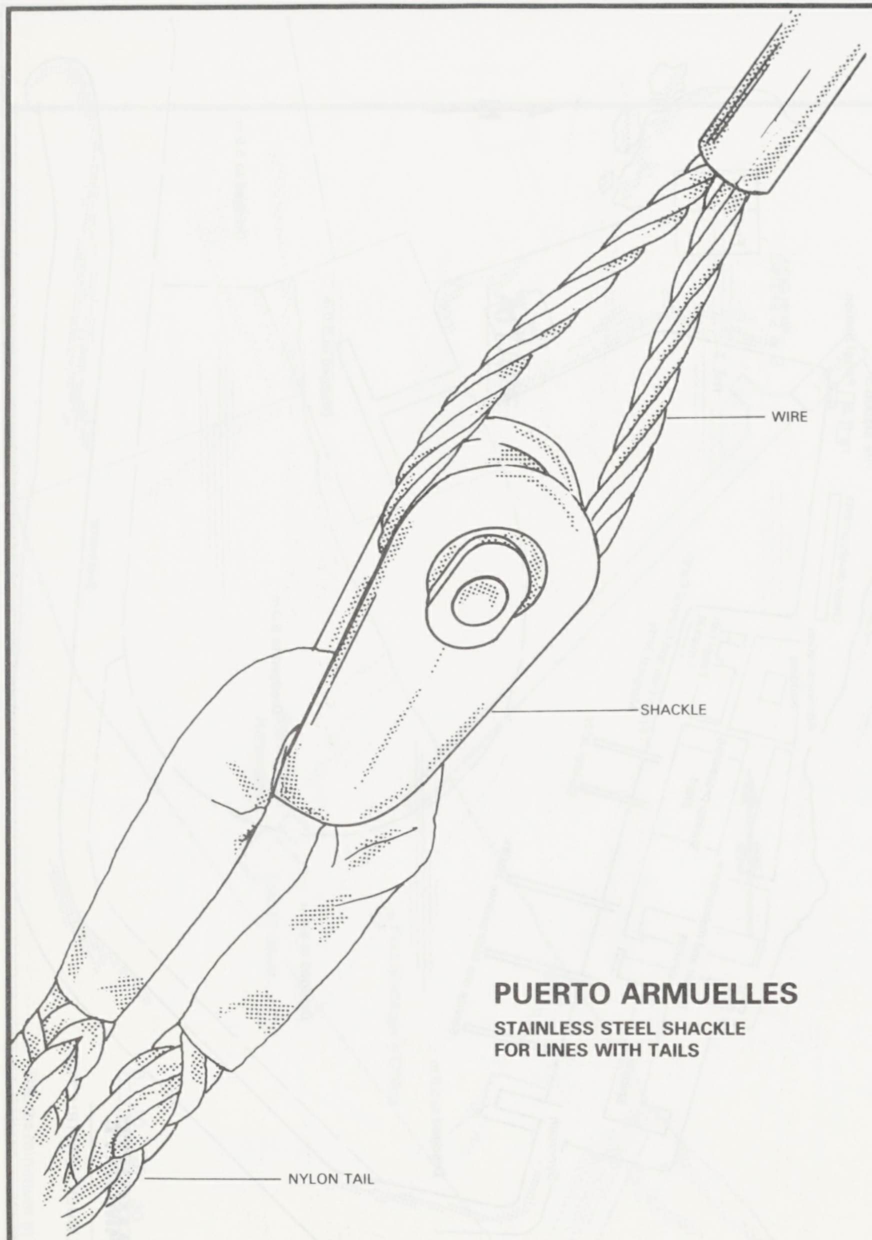
PETROTERMINAL DE PANAMA S.A.



PUERTO ARMUELLES

STAINLESS STEEL SHACKLE FOR LINES WITH TAILS

Tails, if used, should preferably be made of nylon line (3 strand construction should not be used) about 11 m. long overall, and have a breaking strength at least 25% greater than the MBL of the wire to which they are attached. They should be replaced at least every 18 months unless experience and/or inspection indicates more or less frequent replacement is necessary.

No repairs to main engines allowed while vessels are alongside the pier.

Mooring ropes shown above are the safe minimum number for average weather conditions.

If necessary, additional mooring ropes may be required by the Pilot of ASESA Harbour Master.

Nylon ropes may be supplied by ASESA if any vessel does not have a sufficient quantity of suitable ropes for safe mooring.

Mooring ropes must be carefully tended to hold the vessel close to the dolphins at all times.

Mark to show forward limit of export tanker.
Export Tanker
(120,000 tonne)

NOTES

1. Ropes number 1 & 4 forward and ropes number 1 & 2 aft are the main departure ropes. Ensure that these can be cast off last.
2. If ropes number 8 forward and number 7 aft cannot be used then rope number 4 forward and number 2 aft will have to be doubled up.
3. The mooring lay-out shown is the minimum requirement.

For vessels proceeding to Istanbul, or any other ports within the Sea of Marmara or Gulf of Izmit, pilotage is compulsory from the southern entrance. The same applies for vessels proceeding outwards. Pilotage is not compulsory for vessels proceeding from Gelibolu to Darica, but is compulsory within the Gulf of Izmit. For through traffic pilotage is not compulsory for the Bosphorous and Dardanelles.

All pilot stations monitor V.H.F. channel 16.

GOOD HOPE

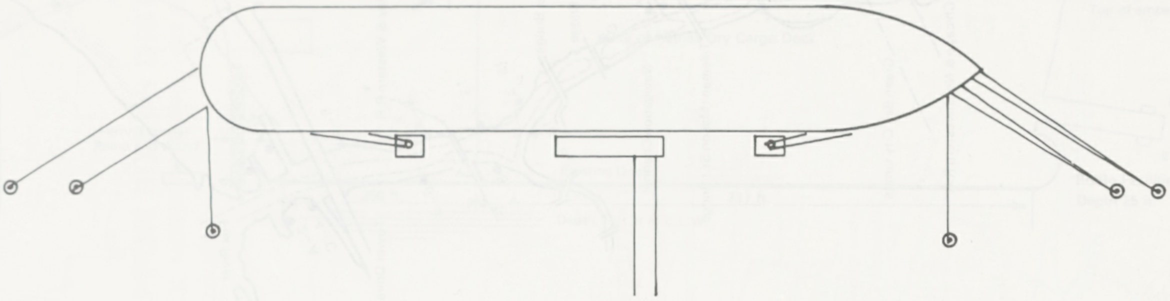
GATX



The dock is constructed of steel piles with a concrete floor and consists of a central platform and two breasting dolphins. Both the platform and the breasting dolphins have a wood faced steel pile fender system with moulded rubber impact energy absorber installed between the outer fender and the main dock structures.

MISSISSIPPI RIVER

KEY PLAN

Mississippi River Crossing Channels

The project depth for crossing channels is 40 ft. for a width of 500 ft.

The controlling depths are published in Navigation Bulletins issued periodically by The New Orleans District Corps of Engineers, New Orleans, Louisiana.

Crossing channels may be marked by buoys during Low Water.

Pollution Reports

Report all spills of oil and hazardous substances to The National Response Center via 800-424-8802 (toll free), or to the nearest U.S. Coast Guard facility if telephone communication is impossible (33 cfr 153).

Warning

The Prudent Mariner will not rely solely on any single aid to navigation, particularly on floating aids. See U.S. Coast Guard Light List & U.S. Coast Pilot for details.

Caution

Mariners are warned that logs and other floating debris are constant dangers to navigations. Night travel by small craft is not recommended because of the hazard of floating obstructions.

THE FOLLOWING VHF–FM FREQUENCIES ARE DESIGNATED AS VTS SECTOR FREQUENCIES:

Sector One – Channel 11 (156.55 mhz)
Sector Two – Channel 12 (156.6 mhz)
Sector Three – Channel 14 (156.7 mhz)
Sector Four – Channel 11 (156.55 mhz)
Sector Five – Channel 14 (156.7 mhz)

INFORMATION REQUIRED WHEN ENTERING THE VTS AREA

1. Type of vessel
2. Name of vessel
3. Point of entry
4. Destination & route
5. Length
6. Deepest draft
7. Speed of advance
8. Hazardous cargo – yes or no
9. Any equipment problems

FINAL REPORT

When a vessel anchors in, moors in, or departs from, the VTS area, the Master shall report the place of anchoring, mooring, or departing to the VTC.

MOORING ARRANGEMENTS FOR
50,000 DWT VESSELS & ABOVE

NOTE: Due to tidal currents, near proximity of passing vessels, and exposure of your vessel to Westerly winds, particularly in light condition, the following mooring arrangement is required.
Double spring lines to be used both forward and aft. Both forward and aft springs may lead through the same chocks at their respective locations, however, each spring line should be secured to a separate bollard on the dock.
The bow breast line deadman is approximately 137 m. from the vessel. A manila or synthetic line must be used as it is impossible to pull a wire to the shoreline here.
A shore messenger will be used to pull this line to the deadman.

Legend:
The Port of Palm Beach is located on a saltwater sound known as Lake Worth and lies 1⅓ miles from the 37-foot contour of the Atlantic Ocean, to which it is connected by an artificial cut at the North end of Lake Worth known as Lake Worth Inlet.
(1) Entrance to the harbour is by a dog-leg channel running due West through the jetties and then turning Southwesterly to the terminals, 400 ft. wide, narrowing to 300 ft. in width as it continues across the lake another 3,000 ft., leading into a trapezoidal turning basin. (2) 1,400 ft. by 1,310 ft., adjacent to the port terminals on the West shore. Depth of the channel and turning basin is 35 ft. (3) Slip No. 1 is 690 ft. in length with water depth of 27 ft. (4) Slip No. 2 is 650 ft. in length with water depth of 35 ft. (5) Extension of turning basin with water depth of 25 ft. (6) Three Ro/Ro ramps and the New North Wharf, which together comprise 1,054 ft. in length.

RIVERHEAD

SUGGESTED MOORING PLAN — NORTH BERTH

The diagram above represents a suggested mooring arrangement for the North berth of the Northville Industries Corporation tanker platform at Riverhead, New York.

The ship plan represents a 30,000 to 40,000 d.w.t. handy size tanker with bridge amidship.

Mooring operations at Northville are conducted as follows:

1. With the vessel alongside the breasting dolphins, run spring lines fore and aft to maintain desired position. Spring line leads must provide adequate scope.
2. The launch will carry a messenger from the mooring dolphins to the bow or stern to run head, stern, and breast lines. The line crew will work one end of the ship at a time, as requested by the Master.
3. Each mooring line should be secured to an individual set of bitts. Placing two lines on one set of bitts by taking round turns should be avoided.
4. All lines must be tight, and the mooring plan adequate for all anticipated weather conditions before the transfer arms will be connected.
5. The ship's gangway is not used at this terminal.

RIVERHEAD

SUGGESTED MOORING PLAN — SOUTH BERTH

The diagram below represents a suggested mooring arrangement for the South Berth of the Northville Industries Corporation tanker platform at Riverhead, New York.
The ship plan represents a 30,000 to 40,000 DWT handy size tanker with bridge amidship.

Mooring operations at Northville are conducted as follows:

1. With the vessel alongside the breasting dolphins, run spring lines fore and aft to maintain desired position.
2. The launch will carry a messenger from the mooring dolphins to the bow or stern to run head, stern, and breast lines. The line crew will work one end of the ship at a time, as requested by the Master.
3. Each mooring line should be secured to an individual set of bitts. Placing two lines on one set of bitts by taking round turns should be avoided.
4. All lines must be tight, and the mooring plan adequate for all anticipated weather conditions before the transfer arms will be connected.
5. The ship's gangway is not used at this terminal.

TRAFFIC SEPARATION SCHEMES
(RULE 10 APPLIES)

1. In the fourth Kuril Strait
2. Off the Aniwa Cape
3. Off the Ostrovnoi Point
4. In the approaches to the Gulf of Nakhodka

INTERNATIONAL REGULATIONS FOR PREVENTING COLLISION AT SEA, 1972

RULE 10

Traffic Separation Schemes

(a) This Rule applies to traffic separation schemes adopted by the Organisation.

(b) A vessel using a traffic separation scheme shall:
  (i) Proceed in the appropriate traffic lane in the general direction of traffic flow for that lane.
  (ii) So far as practicable keep clear of a traffic separation line or separation zone.
  (iii) Normally join or leave a traffic lane at the termination of the lane, but when joining or leaving from the side shall do so at as small an angle to the general direction of traffic flow as practicable.

(c) A vessel shall so far as practicable avoid crossing traffic lanes, but if obliged to do so shall cross as nearly as practicable at right angles to the general direction of traffic flow.

(d) Inshore traffic zones shall not normally be used by through traffic which can safely use the appropriate traffic lane within the adjacent traffic separation scheme. However, vessels of less than 20 m. in length and sailing vessels may under all circumstances use inshore traffic zones.

(e) A vessel other than a crossing vessel or a vessel joining or leaving a lane shall not normally enter a separation zone or cross a separation line except:
  (i) In case of emergency to avoid immediate danger.
  (ii) To engage in fishing within a separation zone.

(f) A vessel navigating in areas near the terminations of traffic separation schemes shall do so with particular caution.

(g) A vessel shall so far as practicable avoid anchoring in a traffic separation scheme or in areas near its terminations.

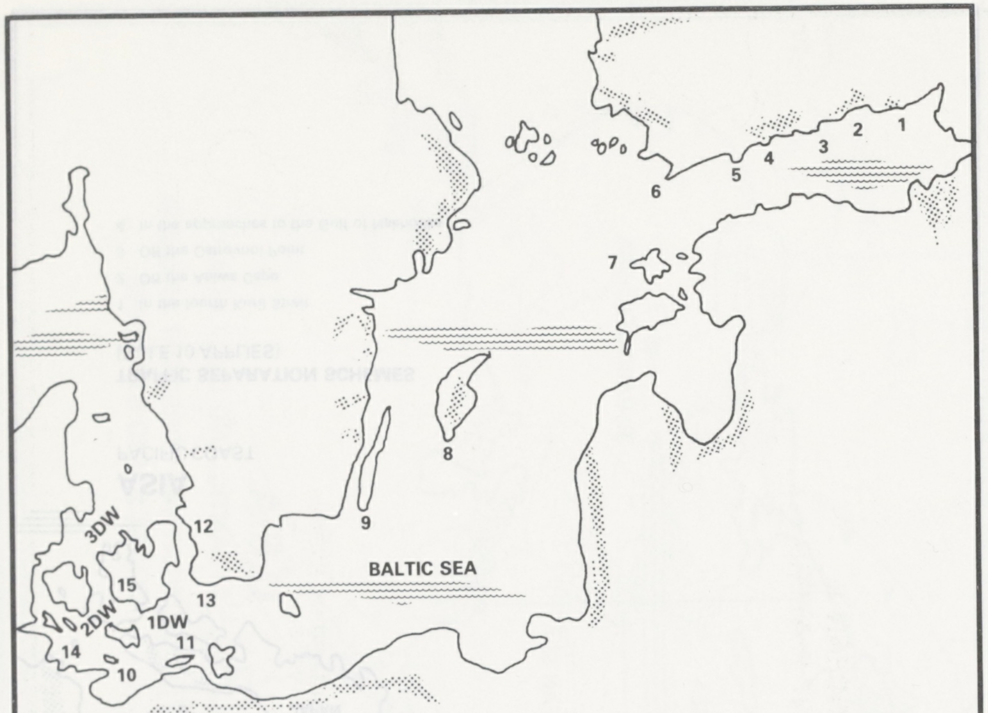
(h) A vessel not using a traffic separation scheme shall avoid it by as wide a margin as is practicable.

(i) A vessel engaged in fishing shall not impede the passage of any vessel following a traffic lane.

(j) A vessel of less than 20 m. in length or a sailing vessel shall not impede the safe passage of a power-driven vessel following a traffic lane.

(k) A vessel restricted in her ability to manoeuvre when engaged in an operation for the maintenance of safety of navigation in a traffic separation scheme is exempted from complying with this Rule to the extent necessary to carry out the operation.

(l) A vessel restricted in her ability to manoeuvre when engaged in an operation for the laying, servicing or picking up of a submarine cable, within a traffic separation scheme, is exempted from complying with this Rule to the extent necessary to carry out the operation.



BALTIC SEA

Algeria

~~ARZEW: (Also see page 3)~~

SHIPMASTER'S REPORT: November 1986.

Note: Forms below are for the Port of Arzew, there may be different requirements at other Algerian ports, but this should serve as a guide.

Agent:

Inwards Declaration. } Both filled out at the same time, Agent
Outwards Declaration } supplies forms.
1 Narcotics List.
1 Declaration of Arms and Ammunition or 'Nil'.
2 Crew Lists.

Immigration:

2 Crew Lists.
1 Narcotics List.
1 Ship's Particulars. (Form supplied).

ADD BEFORE "AUTHORITY"

Port Health:

1 Crew List.
1 Health Declaration. (IMO Form).

Customs:

1 List of Crew Effects. (Crew Manifest).
1 Bonded Stores List.
1 Slop Chest/Shop Store List.
1 List of Ship's Currency.
1 List of Currency held by crew.
1 Declaration of Arms and Ammunition or 'Nil'.
1 Narcotics List.

N.B.: Customs are very strict, make sure everything well in order for all their forms. (I was informed by Agent that a Shipmaster had recently been fined US$9,000.00 due to the fact that he forgot to declare US$2,500 of the Chief Engineer's money, which he had been holding in the ship's safe).

NEW ENTRY - ADD

DELLYS: 36.55 N. 03.55 E. (See ~~Late~~ Plan~~s~~)

DOCUMENTS: Documents which the Master of the vessel must prepare prior to arrival for necessary port formalities.

(a) For the Agent of Societe Nationale des Transports Maritimes or Compagnie Nationale Algerienne de Navigation (The two Algerian National Shipping companies):

2 Crew Lists.
2 Stores Lists, including bonded material.
2 Foreign Currency Lists.
5 Cargo Manifests.
2 Stowage Plans.
4 Notices of Readiness.
2 Original Bills of Lading.
2 Crew and Passenger Personal Effects Lists.

(b) *For Customs:*

1 Cargo Manifest.
1 Crew List.
1 Foreign Currency List.
1 Stores List.

(c) *For the Police (Immigration):*

1 Crew List.
1 Cargo Manifest.
1 Narcotics List.
1 List of Arms and Ammunition.

PILOTAGE: Compulsory when entering and leaving and for all movements (shifting). Pilotage operations only take place during the daytime. To request the Pilot, call the Port Captaincy by VHF Channel 16, or by using signals laid down in the International Signalling Code.

The Pilot boards the vessel within the confines of the anchorage zone. The pilot ladder must be positioned on the starboard side.

ANCHORAGE: The Bay of Dellys, being open from the North to the East, offers a very good anchorage against winds from the West of N.W.

The anchorage zone is within an area defined by a line joining the points of Dellys and Garrouba.

Depths vary between 13 m. and 24 m., and the bottom is rocky.

RESTRICTIONS: Movements of vessels (entering and sailing) are not permitted at night.

MAX. SIZE: The maximum authorised draft is 18 ft.

Overall length is limited to 100 m. for conventional vessels, and to 105 m. for Ro/Ro vessels.

HEALTH: No procedure is stipulated in order to obtain Free Pratique. Nevertheless, and in the event of illness or infection being suspected on board, advise the Port Captaincy by VHF Channel 16 or by telex prior to arrival in the roads.

RADIO: Algiers Radio is operative 24 hours a day, receiving on 500 kHz and 2182 kHz and transmitting on 1792 kHz.

VHF: The Port Captaincy operates on Channel 16.

TUGS: None available.

BERTHING: The port has 2 quay berths (Quay No. 1 and No. 4), which are used by commercial vessels. Berthing at these berths is subject to the dimensions of the vessel.

STEVEDORES: The stevedoring service operates from 0700 hrs. – 1900 hrs. in 2 shifts, viz. 0700 hrs. – 1300 hrs. and 1300 hrs. – 1900 hrs.

The gangs are ordered through the Port Captaincy by the SNTM/CNAN Agent for general cargo, and by the receiver where bulk cargo is involved. The vessel must notify its ETA to the SNTM/CNAN Agent at least 24 hours in advance of arrival.

As the port has no cranes, operations are effected by ship's equipment (crane, derricks, etc.).

The average rates of discharge are in the order of 23 t.p.h. per gang for bulk cargo and 40 t.p.h. per gang for general cargo.

MEDICAL: There is a hospital at Dellys for all medical treatment required.

The SNTM/CNAN Agent must be advised prior to the arrival of the vessel so that they may make the necessary arrangements.

DENSITY: 1025.

FRESH WATER: Drinking water only available at Quay No. 4.

FUEL: Not available. Vessels can bunker at Algiers port (55 miles) or at Bejaia (approx. 65 miles).

GANGWAY/DECK WATCHMEN: Not compulsory, but recommended. The SNTM/CNAN Agent is instructed to provide vessels with watchmen.

OPENING/CLOSING HATCHES: These operations are to be carried out by the ship's crew.

CUSTOMS ALLOWANCES: 200 cigarettes and 1 bottle of spirits per crew member per week.

CONSULS: None.

REPAIRS: Not possible.

REPATRIATION: This can be carried out via Algiers with frequent departures to Europe by air and by car ferry.

AIRPORT: "Houari Boumediene" International Airport at Algiers, 80 km. from Dellys.

POLICE/AMBULANCE/FIRE: Police: Tel: 42.95.27. Fire Brigade/ Ambulance: Tel: 42.90.50. These services are located within the port area.

SHORE LEAVE: Crew members must carry a passport or seamen's book, and report to the Port Police where a shore pass will be issued.

TIME: GMT plus 1 hour.

GENERAL: The predominant winds in the Port of Dellys are from the West and N.W.

Ro/Ro vessels destinated for the Port of Dellys must be equipped with bow thrusters.

AUTHORITY: Direction du Port de Dellys, Entreprise Portuaire d'Alger, Dellys, Algeria. *Contact:* Mr. N. Hasseni, Port Director. *Tel:* 42.98.48/42.93.77. *Telex:* 76089 Porde Dz; Mr. A. Chaouadi, Port Officer. *Tel:* 42.91.79.

Angola

ADD BEFORE "AUTHORITY"

(a)

~~CABINDA: (Also see page 10)~~ ~~(See Late Plans)~~

SHIPMASTER'S REPORT: October 1986.

Vessel berthed at Berth "T" (Takula), see "Plan".

Documents:

5 copies Crew List.
5 copies Passenger List or 'Nil'.
5 copies Arms and Ammunition List.
5 copies Narcotics List.
5 copies List of Birds and Animals.
5 copies List of Ports of Call.
3 copies Crew Effects List.
3 copies Vaccination List.
1 copy Health Declaration.
3 copies Stores List.
Clearance from Last Port.

Officials: The Agent, 1 Immigration Officer and 1 Customs Officer board after vessel is berthed alongside the "Afran Ocean".

Immigration examine all passports or discharge books. Customs Officer issues Free Pratique.

Loading Master and Cargo Surveyor live on board during vessel's stay.

Tugs: 2 tugs are used for berthing and unberthing and stay in the vicinity of vessel at all times. One of the tugs is made fast to the stern of the "Afran Ocean" in order to keep the bow into the swell.

There was a constant motion between the 2 vessels, much chafing of mooring lines and several ropes parted.

Ballast: Vessels are required to retain on board at all times 30% of Summer d.w.t. with ballast and/or cargo.

ADD BEFORE "AUTHORITY"

~~MOCAMEDES: (Also see page 14)~~

SHIPMASTER'S REPORT: March 1987.

Restrictions: No night entrance into Namibe Bay, entry only permitted in daylight.

When our vessel entered Saco Bay for anchoring and when 1 mile offshore, 5 red warning shots were fired at the vessel.

Australia (NEW ENTRY – ADD)

VARANUS ISLAND TERMINAL: 20.38 S. 115.36 E.

(See ~~Late~~ Plan~~s~~)

LOCATION: The onshore terminal is situated on Varanus Island which is the largest of the Lowendal group of islands. The offshore Tanker Terminal is situated 2.0 miles offshore in Lat. 20° 38′ S., Long. 115° 36′ E. (see "Plan"). Masters are referred to the current hydrographic chart Aus. 742 for further information.

PILOTAGE: The Pilot and 2 Operators will board via a launch in position Lat. 20° 38′ S., Long. 115° 42′ E. All vessels should ensure that a good lee is provided and the derrick or deck crane is ready to pick up the terminal equipment container from the launch. Accommodation and meals are to be provided for Pilot and 2 operators.

Pilot ladders should be rigged in accordance with all relevant S.O.L.A.S. Regulations.

ANCHORAGE: The recommended anchoring position is Lat. 20° 38′ S., Long. 115° 40′ E., but due to the variable holding qualities of the whole area it is recommended that Masters exercise the utmost caution when anchoring and whilst laying at anchor.

APPROACHES: *Water Depth:* Within the 0.5 nautical mile mooring circle there is a least depth of 20.4 m. within the conical approach area (060°/240° and 120°/300° boundaries) depths in excess of 20.4 m. are found. Although attention is brought to the 20.1 m. patch and the 20.2 m. patch as indicated on the hydrographic survey certificate, at this stage it is envisaged that the maximum draft of vessels using the port would be 17.0 m.

Departure: After completion of loading, a vessel's departure should be as prompt as practicable. Once clear of the berth and the Pilot has disembarked it is recommended that the Master follows the recommended course laid down on the appropriate hydrographic chart.

MAX. SIZE: The terminal is designed to accommodate vessels from 20,000 d.w. tonnes to 140,000 d.w. tonnes. The largest dimensions being.

(a) Deadweight 140,000 tonnes (approximate).
(b) Length Overall (LOA) 300 m.
(c) Beam 46 m.
(d) Draft 17 m.

Vessels exceeding the following dimensions cannot be accommodated at the Loading Terminal unless express permission is granted by Bond Corporation.

RADIO: *ETA and Arrival Messages:* Vessels proceeding to the Varanus Island loading terminal shall notify Bond Corporation Pty. Ltd., Petroleum Division, at their Perth office, on telex: AA95781 BONPET or cable address: Bond Corporation Pty. Ltd., Petroleum Division, GPO Box X2275, Perth, W.A. 6001, their estimated time of arrival, not less than 96 hours before arrival, amending or confirming the ETA at intervals of 48 hours and 24 hours before arrival at the Terminal. Failure to comply with the above procedure may result in the Pilot not being available on the vessel's arrival.

Ballast Water: Quantity and condition of ballast water on board to be advised in the 96 hour message, including information regarding any contamination of ballast water or slops that are to be pumped ashore. If the voyage from the final departure port to the loading terminal is less than 96 hours then this information should be transmitted as soon as practicable.

Declarations Prior to Arrival: The following declarations are to be included and verified in the 24 hour message:

(a) Is the hull leak free?
(b) Is there an inert gas system fitted?
(c) If fitted, is the inert gas system fully operational?
(d) Are there any defects to the vessel, machinery and equipment, which may effect safe pilotage, berthing, cargo or ballast operations?
(e) Have stress calculations for the envisaged programme of cargo handling and ballasting been made?
(f) Is the hull stress calculated within recommended safety limits?

VHF: A 24 hour listening watch is maintained on international marine VHF Channel 16. Vessels should tune their VHF sets to Channel 16 when within 100 nautical miles of the Lowendal Islands and as soon as practicable thereafter contact the Island Radio Room and confirm the vessel's ETA at the Pilot Boarding Station.

VHF Marine Channels available:

Marine Channel 16 calling and distress.
Marine Channel 67.
Marine Channel 9 working Channel.
Marine Channel 74 working Channel.

TERMINAL FACILITIES:

ONSHORE:

Storage: 3 tanks with storage capacity of 750,000 bbls. (119,250 cu.m.).

Pumps: The 3 cargo pumps are rated at 1,654 cu.m.p.h. each. (in February 1987, 2 pumps only available. Average rate 2,700 cu.m.p.h.).

OFFSHORE:

Pipe-line: A 4,200 m. long×762 mm. (30 in.) pipe-line leads from the shore to the Tanker Terminal. At the pipe-line end manifold (PLEM) there is a valve at the 406 mm. (16 in.) take off prior to connection to the submarine hose.

Hose: The submarine hose is 73.15 m. (240 ft.) long, consisting of 8×9.144 m. (30 ft.) sections, including (from the PLEM) 4×406 mm. (16 in.) hoses, 2×406 mm. (16 in.) buoyancy chamber hoses, 1×406 mm. (16 in.) to 305 mm. (12 in.) reducer and 1×305 mm. (12 in.) rail hose. At the end of the 305 mm. (12 in.) hose there is a butterfly valve, spool piece and a 12 in. flange fitted with camlocks for connection to the ship's manifold. The weight of hose to be handled by the ship is 4.0 tonnes when full of crude oil.

Moorings: The mooring consists of an 8-leg Multi-Point Mooring (MPM), with 4 buoyed legs and 4 swamped legs.

Although the ship's anchors will be laid out during the berthing, due to the variable seabed holding qualities, swamped moorings (legs 4 and 5) will be picked up and tensioned to back up the ship's anchors.

It should be noted that an additional 30 m. of nylon rope has been added to all pennant buoy lines.

LOADING:

1. Prior to arrival vessels must have the starboard derrick or crane rigged and ready for pick up of the submarine hose.

The PLEM is marked by a spar buoy and the end of the submarine hose is marked by a pick-up buoy.

When the vessel is in position and secured to the satisfaction of the Master and Pilot/Loading Master the submarine hose pick-up shall commence. Once pick-up has commenced the propeller must not be turned until the hose is disconnected and laid back onto the seabed unless it is turned by use of the turning gear only.

2. Once the hose is connected and all ship/shore safety check lists have been satisfactorily completed, the butterfly valve and ship's manifold valve will be opened and gravity loading will commence. Once the ship's checks are completed and clearance given, the loading pumps will be started.*

3. During loading at least one ship's tank is to be open to the inflow of oil and the inflow of oil is not to be shut off by closing ship's valves or the hose valve without prior approval of the Pilot/Loading Master. In order to reduce back pressure at the ship's rail, as many tanks as possible should be open during loading. In any event the ship's rail back pressure should not exceed 150 p.s.i.

4. The Pilot/Loading Master is to be informed when 200 tonnes is required to complete loading so that the loading rate can be eased down, and again at 50 tonnes so that the loading pumps may be stopped and the loading completed by gravity. When loading is completed the ship's manifold valve is to be closed slowly. When the manifold valve is closed the butterfly valve will be closed.

5. During loading the tank tops should be kept closed at all times, ullage plugs should be kept closed at all times except when sampling, gauging, thieving or inspecting.

6. Portable UHF radios will be supplied for communication between the tanker and terminal. Hourly checks between tanker and terminal will be required so that undetected radio failure can be minimised.

*During loading operations, a responsible deck officer must be present to supervise the ship's crew and approve the hose connections.

BALLAST:

1. Ballast Reception: The dirty ballast water pond has a capacity of 250,000 bbls. (39,750 cu.m.).

2. Deballasting: Vessels should arrive at a ballasted draft acceptable to the Pilot. If the ballast is dirty then during fine weather a lesser amount of ballast may be acceptable subject to approval of the Bond Petroleum Operations Manager.

3. Clean Segregated Ballast: This ballast water will be discharged consecutively within the loading. The Pilot/Loading Master must be notified prior to any deballasting and at least one quarter of the Summer deadweight must be loaded before deballasting commences.

4. Dirty Ballast: Masters should notify Bond Corporation regarding contaminants in ballast. The ballast water may be tested by Bond Corporation and may not be accepted ashore into the Island facilities should it contain excessive contaminents unacceptable to the DCLAM for underground disposal.

5. Dirty Deballasting: When one quarter to one third of the Summer deadweight has been loaded, loading will cease and the vessel may commence deballasting subject to No. 4 above.

Pumping will continue until all the ballast water is discharged, crude oil previously loaded will be pumped ashore to clear the submarine pipe-line. The Pilot/Loading Master is to be informed when 1,600 cu.m. of crude oil has been pumped. When the water-oil interface is detected onshore, the ship's pumps are requested to be stopped. Loading will then recommence as per "Loading" – Item No. 2. which see.

MOORING: *Mooring Equipment:* All tankers must have sufficient equipment for mooring at the Terminal:

(a) A minimum of 4 sets of bitts are required on the after deck and a set of bitts on the port and starboard side at the after end of the main deck forward of the bridge front. A set of bitts on the port and starboard side of the main deck forward and a minimum of 4 sets of bitts on the forecastle. All the above mentioned sets of bitts must be able to accept preventer lines or swamp moorings which must be hove tight and made fast.

(b) A minimum of 4 tension winches on the after deck and 2 tension winches on the after end of the main deck with at least 220 m. of good quality mooring line on each winch are required. Sufficient winches forward to heave tight the swamp moorings for making fast.

(c) Prior to berthing vessels should have on the after deck and the after end of the main deck, 2 mooring lines securely joined together giving an effective length of approximately 440 m.

(d) Only vessels fitted with adequate bridge wing searchlights will berth at night.

Tidal Flow: The tidal flow at the Tanker Terminal is approximately 173°/353° and may attain a speed of 2 knots at Spring tides.

MEDICAL: No services available.

FRESH WATER: Not available.

FUEL: Not available.

SURVEYORS: None locally.

REPAIRS: No facilities available.

CONSULS: None.

GENERAL: *Agency:* No ship's agency services are provided by Bond Corporation. Tankers arriving from foreign ports must make prior arrangements for quarantine and Customs clearance through their Agents. Dampier Agents and Customs attend on arrival, Customs only on departure.

Services: Laundry and Stores not available locally.

Ship's crews cannot be accommodated ashore on Varanus Island.

OPERATOR: Bond Corporation Pty. Ltd., Petroleum Division, G.P.O.Box X 2275, Perth, W.A. 6001. *Telex:* AA 95781 Bonpet.

Belize

ADD BEFORE "AUTHORITY"

~~BELIZE: (Also see page 168)~~ **(See Late Plans)**

SHIPMASTER'S REPORT: February 1987.
Port Limits: 3 miles from English Cay light and on leading lights.
Documents:
6 Crew Lists.
2 Passenger Lists.
2 Crew Declarations.
1 Health Declaration.
8 Cargo Manifests.
2 copies of Bills of Lading.
Pilotage: Pilot ordered through Agents. Pilot boards outside reefs and asks vessel to go on to English Cay leading lights 2 – 3 miles from the leading lights. Pilotage to berth is straight forward in deep natural channel. Once vessel leaves this channel the waters shoal rapidly and 20 ft. is the maximum draft, although the Pilot says he has berthed ships at 21 ft. Approach berth on 045° T and when starboard buoy almost abeam let go starboard anchor and manoeuvre into berth. First line to port aft buoy needs to be the best and to be doubled up. The stern is heaved around with this and as the wind was Northerly 10 – 15 knots it was taken steadily. Forward port buoy lines were run and vessel then heaved over to pipe-line buoy. Stern buoy line then run and vessel backed into position. Cable was out to 5 shackles on deck. Other buoy lines were run and on completion vessel was heading 108°T. Throughout our stay the weight remained on the port buoy lines as the wind stayed in the North. Very little tidal influence.
Anchorages: None specified, numerous safe areas to anchor if required.
Restrictions: Daytime berthing and unberthing.
Max. Size: Limiting factor is 20 ft. draft.
Health: Port Health Officer gives Free Pratique and 'Q' flag to be flown until given. Renewed Derat Exemption here.
Radio: All communication done via Sat Com.
VHF: Pilot on Channel 16 and 6. Port working Channel is Channel 6 which Agents and all use. Port not very busy so no problems. They have 1 tanker per month.
Radar: None.
Tugs: None.
Berthing: See "Pilotage".
Bridges: None.
Medical: Doctors in the town but anything serious has to be flown out.
Tankers: 1×8 in. submerged pipe-line through which all grades are pumped with water plug between each. Line to be left in gas oil. Max. B.P. is 140 p.s.i. and a general rate of 375 cu.m.p.h. was obtained on all grades.
Density: 1021.
Fresh Water: No means to supply at tanker berth.
Fuel: Diesel with 48 hours' notice. No fuel oil.
Fire Precautions: Normal ship precautions; no help from shore.
Consuls: British and U.S.
Repairs: Very minor repairs only.
Dry Docks: None.
Surveyors: Lloyd's, A.B.S. and B.V.
Gangway/Watchman: None.
Customs Allowances: 200 cigarettes and 1 bottle of spirits. Bond sealed.
Repatriation: No problems with staff or crew changes.
Airport: 12 miles from town.
Time: GMT minus 6 hours.
Police/Ambulance/Fire: None.
Emergency Co-Ordination Centre: None.
Telephones: None.
Services: None.
Banks: Royal Bank of Canada, Barclay's Bank, Bank of Novia Scotia, and Atlantic Bank.
Storing: Fresh vegetables only. Lobster in season January to March.
Shore Leave: No restrictions and boat stays with ship all the time.
Identification Cards: Not required.
Regulations: None.
Delays: Weather, daylight berthing and unberthing.
Developments: None anticipated.
General: Shore capacity: Avgas 2,400 bbls., REG Mogas 24,800 bbls., Premium Mogas 7,900 bbls., Avtur 22,800 bbls., gas oil 29,600 bbls.
Authority: Belize Port Authority, Belize City.

DELETE & INSERT.

~~VILA DO CONDE: (Also see page 232).~~

ADD BEFORE "AUTHORIT

SHIPMASTER'S REPORT: November 1986.
Vessel: 38,100 d.w.tonnes.
Berth: Albras Terminal.
Location: Lat. 01° 32′ S., Long. 48° 45′ W.
Pilotage: Call Salinopolis Pilots on VHF Channel 16. Pilots available 24 hours and board on arrival. River Pilot will berth vessel. Same river pilotage for Belem and Vila do Conde.
Approaches: Best approach to Salinopolis Pilot Station (Lat. 00° 31′ S., Long. 47° 22.5′ W.) is a course 167° heading for lighthouse.

Pilot will board on bearing 167° and 8 miles from the lighthouse. A strong current sets in a Westerly direction.
Radio: PPL (Belem Radio) provides reliable services.
Berthing: One berth for Alumina-in-bulk discharge. Length about 210 m. It is not possible to berth if wind greater than Force 4 as no tugs available. Whilst waiting to berth, vessel can anchor about 1 mile off the berth. There is sufficient sea room for turning around. Customs, Immigration and Health officials may board while at anchor. Berthing usually starboard side alongside, using one anchor. Jetty well fendered, but standby with fenders aft.
Discharging: Cargo work possible throughout 24 hours. Two evacuators for discharging, can reach all hatches. Total capacity 600 t.p.h. For the last 800 tons in each hold rate is 150 t.p.h.
Density: About 995 alongside berth.
Fresh Water: Not available at berth.
Fuel: Available at Belem.
Watchmen: Two port watchmen compulsory, to be accommodated on board.
Repatriation: Belem Airport well connected with Recife and Rio de Janeiro, for international flights direct to Europe and U.S.A.
Time: Local time is GMT minus 3 hours. Summer time is GMT minus 2 hours (begins on last Saturday in October).
Shore Leave: No restrictions. Nearest small towns are San Francisco (20 minutes) and Vila do Conde (30 minutes) by car. Port Agent Transnav provides mini-bus. Belem in one hour from San Francisco by speed boat and two hours by regular boats.
Provisions: All fresh provisions and bonded stores available from Belem ship chandlers only, can be ordered by telephone. The transportation costs added to the provisions bill.

INSERT AT BEGINNING OF PORT

Cayman Islands

~~GEORGETOWN: (Also see page 308)~~ **(See ~~Late~~ Plans)**

INSERT BEFOR AUTH ITY

SHIPMASTER'S REPORT: February 1987.
Port Limits: 3 miles off.
Documents:
6 Crew Lists.
4 Cargo Manifests.
2 Crew Declarations.
2 Stores Lists.
2 copies of Bills of Lading.
1 copy Ship's Particulars if first visit.
Clearance from Last Port.

Ship was cleared by Agent and 1 Customs Officer. The Immigration Officer comes if any crew leaving or joining. Clearance was given to leave at this time. Officials were polite and friendly.
Pilotage: Pilot requested through Agent 48 hours in advance but Pilot lives locally and says 30 minutes notice is all he needs and is often all he gets. All communications are carried out through Port Security on Channel 16 and working Channel of vessel's choice. Port Security will contact Pilot, Agent or anyone else vessel wishes to talk to. Pilot boards from small work boat, either the "Eagle" or "Rambler", about 1 mile West of oil tanks. These boats have Channel 6 and Pilot can be contacted on this when he is under way.
Anchorages: Pilot recommended position with South Cay Light 350° by 6 cables if wind from North and at any other time just off town as marked on the Admiralty chart. He stated that at times there were up to 5 passenger vessels anchored here so it could be crowded. Unless vessel is expecting a long delay it is better to lie off.
Restrictions: Tankers berth between daylight and 1800 hrs. but can leave at anytime. Only restriction in berth is max. length of about 600 ft., depth in berth 60 ft. No restriction on breadth.
Health: Pratique granted by Customs Officer.
Radio: Sat Com.
VHF: All communications channelled through Port Security on Channel 16.
Radar: None.
Tugs: None.
Berthing: See "Plan" for final mooring position.

Vessel approached from the South and passed aft buoy close to starboard, 2 head lines were run to forward buoy and when weight was on these ropes engine was stopped and 2 lines were run aft to buoy. Vessel was then manoeuvred into position on a fore and aft line and a line was run to the port bow buoy. 2 breast lines were then run from the main deck and these were heaved together and vessel pulled towards the shore until it was close to the submarine marker buoy. These lines are very long and even when vessel is in position 1 line was too short. The lines were run efficiently and the 2 work boats being well crewed. The accommodation ladder was rigged on the port side.
Bridges: None.
Medical: Local hospital and ambulance service. Call Port Security on Channel 16 for service.

Tankers: 1×8 in. pipe-line. This is always left in gasoil so if possible leave gasoil parcel to last or if necessary split discharge. This is no problem as grades are pumped face to face. Average rate of discharge was about 700 cu.m.p.h. and max. back pressure 120 p.s.i.
Density: 1024.
Fresh Water: Can be obtained, but expensive.
Fuel: Not available.
Fire Precautions: Usual ship precautions, no tugs so no fire service to ships.
Consuls: None.
Repairs: No facilities.
Dry Docks: None.
Surveyors: B.V. and Lloyd's.
Gangway/Watchmen: None.
Customs Allowances: 200 cigarettes and 40 oz. spirits. Bond sealed.
Repatriation: No problems with staff or crew changes.
Airport: International airport 4 miles from berth. Cayman Airlines, Northwest, Eastern, and Peruvian Airlines starting up in February 1987.
Time: GMT minus 5 hours.
Police/Ambulance/Fire: None.
Emergency Co-Ordination Centre: None.
Telephones: None.
Services: None.
Banks: All major banks.
Storing: Small supplies of all stores, but very, very expensive.
Shore Leave: No restrictions. One of the rope handling boats stays with the ship and runs personnel ashore when required.
Identification Cards: Not required.
Regulations: None.
Delays: Bad weather and daylight berthing.
Developments: None expected.
General: Research Submersibles Ltd. have small submarines that take tourists down 600 ft., these can be encountered near the berth.

People's Republic of China

✓

INSERT AFTER OCTOBER 1984 REPORT.

~~**DAIREN** (Dalian): (Also see page 332).~~

SHIPMASTER'S REPORT: December 1986.
Documents: Only 1 copy of each document required except for Crew List (6 required). Refused to accept 'Marine Declaration of Health' as it was in English only. All documents had to be in Chinese/English – all available from Agent as well as 'application' forms (de-ballast, postage, etc.). Main papers were Customs Declaration (including Foreign Currency List) Vaccination List, and 'normal' ship's papers. (Register, Derat, etc.).
Officials: Boarded by 'Joint Inspection Team', which consists of 8 people (Immigration, Customs, Port Authority and Agent).

Bond sealed by Customs and unsealed prior to sailing, when the 'Joint Inspection Team' clears the vessel for sailing.
Anchorage: Instructed by Agent to anchor in 'Tanker Quarantine Anchorage' (North of fairway). No problems encountered in entering, buoys in position, but lights rather weak.

No. 1 General Cargo Anchorage very crowded with small vessels.

Unable to contact Port Radio (VHF) on entering and had to wait until following morning.

All vessels are visited at anchor; possibly in order of arrival.
Radio Station: Receives and transmits as per ALRS; but not very good at answering on H/F. Once within M/F range, Radio Officer reported the station as reasonable.
Berth: Vessel berthed starboard side to Pier No. 1, which has a maximum draft of 9.5 m. Pier No. 2, to the East, is believed to be restricted to 8.7 m.
Cargo: 18,000 tonnes of gas oil. Pumping rate: 750 t.p.h. – 800 t.p.h.
Shore Leave: No apparent restrictions, except that all crew have to be back onboard by midnight. Shore pass and passport/CDC book to be carried when going ashore.

Local Seaman's Club and Friendship Store will change any foreign currency.

Taxis to and from club or store apparently paid for by them; from elsewhere taxis appeared to be a little expensive.

SHIPMASTER'S REPORT: January 1987.
Vessel: 105,000 d.w.tonnes with segregated ballast tanks.
Berth: No. 1 Berth.
Max. Draft Allowed: 15.0 m.
Loading: The shore loading rate was given as 2,000 tonnes p.h./boom. This was an optimistic estimate as we received at a maximum rate of 5,200 tonnes p.h. with 4×12 in. booms connected. This decreased to about 4,000 tonnes p.h. when a vessel was loading at Berth No. 2.
Ballast: During entry formalities, the Harbour Master checked the Oil Record Book and the Deck Log Book to confirm where the ballast was shipped. Any ballast taken in Singapore or the Malacca area is considered 'infected' and must be discharged ashore.
Mooring Wires: Vessel is fitted with mooring wires and this caused a delay when sailing as there were not enough personnel to heave in sufficient slack to let go.
Shore Leave: A minibus is available to take personnel ashore to the International Seaman's Club and times are organised to suit ship's staff. For 8 round trips during the vessel's stay the charge was approximately £7 and the journey takes about 10 minutes. Local cash is available (£1=5.15 yuan) but almost any currency can be used at the Seaman's Club, where there is a bar/restaurant, shop and facilities for International telephone calls (£2.00 per minute to the U.K.)
Documents: Discharge Books only were checked by Immigration Officials on arrival, no passports or vaccination cards were required.

Guam

INSERT AFTER "APPROACHES"

~~**APRA:** (Also see page 617).~~

NOTICE:
Issued by: Commander, U.S.C.G., Marianas Section.
Dated: 17th October, 1986.
Subject: SECURITY ZONE.

The Coastguard has directed Naval Prepositioning Ships mooring in Apra Harbour to use Buoy 702* in Outer Apra Harbour and is establishing a security zone around this buoy and Naval Prepositioning Vessels moored thereto effective 17th October, 1986.

A 100 yard security zone has been established in all directions around Buoy 702 and Naval vessels moored there. When no vessels are moored to Buoy 702, a 50 yard security zone will remain in effect around the buoy itself.

The zone is established to safeguard Naval Maritime Preposition Ships against any possible destruction from sabotage or other similar causes.

Entry into the security zone is prohibited unless authorised by the Captain of the Port. Any person or vessel that enters the security zone without the permission of the Captain of the Port is subject to boarding search and removal from the area. Criminal penalties can be pursued against those on board.

*Buoy 702 is approximately 3.3 cables N.E. of the General Anchorage.

India

INSERT BEFORE AUTHORITY

~~**BOMBAY:** (Also see page 652)~~

SHIP OPERATOR'S REPORT: January 1987.
Location: The port of Bombay is situated almost mid-way on the Western coast of India and is a natural deep water harbour protected by the mainland on its East and the island of Bombay on its West. It is the largest Indian port for dry cargoes in bulk and container trade. The oil terminals are located at Butcher Island and at Trombay, where also refineries of Bharat Petroleum, Hindustan Petroleum and Indian Oil are located.

The lube and non-flammable specialties are also handled at some wharves of the Indira Dock and Victoria Dock.
Communications: All vessels bound for Bombay should listen to Bombay Radio (Call Sign – VWB) which is located at Lat. 18° 36′ N., Long. 72° 50′ E. and send their initial ETA as soon as possible.

Laden tankers should include in their initial ETA message: Deepest draft, actual displacement, cargo quantities, Shipper(s), Consignee(s), Bills of Lading particulars and all requirements/services needed.

Tankers arriving in ballast should notify: ETA, amount of slop and dirty ballast to be discharged ashore, deballasting time, proposed loading sequence and quantity of each grade, displacement on completion of loading and all requirements/services needed.

The initial ETA should be subsequently confirmed or revised 72, 48 and 24 hours prior to arrival.

The Port Control Station located at Ballard Pier is equipped with radio telephone and VHF. It keeps a continuous communication watch with Kennery and Prongs Lighthouses and the pilot vessel.

There is also a network of VHF sets in operation in the port and used extensively in co-ordinating the various marine movements in the port.

The pilot vessel 'Veno' is also equipped with VHF, radio telephone and W/T sets. She must be informed of ETA at least 24 hours before arrival.

A Naval Signal Station at Colaba Point, 1 mile N.N.E. of Prongs Reef, may call up vessels by signal lamp, when they are required to answer by the same system.

Radio Pratique is permitted and the following information should be cabled to "Quarantine Bombay" maximum 18 hours and minimum 8 hours prior to arrival:

AAA – Name of vessel and call sign.
BBB – ETA (Local Time).
CCC – Ports called and departure dates within last 30 days.
DDD – Maritime Declaration of Health has negative answers to the 6 health questions (Code Signal ZT should be used).
EEE – No monkeys on board.
FFF – No abnormal mortality of rats on board.
GGG – No person embarked aboard from East Coast of Africa between Port of Sudan and Durban, both ports included.
HHH – Ship healthy. Request Pratique.

Approaches: Decca 7 BV chain covering the area is reported unreliable and transmitting intermittently. However, it is reported that it gives satisfactory daylight performance upto 200 miles offshore between Latitudes 16° N. and 24° N.

The approaches outside the 10 fathom contour are free of dangers. The vessel may approach Bombay from North to South through West, but attention must be paid to areas in which fishing stakes may be encountered as indicated on the chart. The dangerous wrecks and fouled ground exist within the area bounded by parallels Lat. 18° 48.5′ N. – Lat. 18° 50′ N. and meridians Long. 72° 42.5′ E. – Long. 72° 44.5′ E. Masts of Sunken ships are sometimes visible during the periods of the LLW tides. Under no circumstances should the vessel of any draft, attempt to cross this area.

The harbour entrance lined between light buoys moored North of Thal Shoal, S.E. of Prongs Reef and 2.5 miles N.W. of the Shoal.

When approaching Bombay, care should be taken to avoid the obstruction 1.75 miles N.W. of Bombay light vessel and 11 m. Shoal reported 2.5 miles further West, also a wreck with a depth of 11 m. over it – 2.75 miles South of the light vessel.

Pilotage: It is compulsory for all power driven merchant vessels of over 200 tons North of a line drawn East and West through Prongs Reef lighthouse. Such vessels may not enter, leave or shift berths in the area North of this line without a Pilot or Harbour Official on board.

Licensed Pilot may be obtained from the pilot vessel, which has a yellow funnel and is painted white with the word 'Pilot' in block letters on the sides. It cruises in approximate position Lat. 18° 51′ N., Long. 72° 50′ E. Selected Pilots are used for larger vessels.

On arrival, contact with pilot vessel should be established on VHF, on Channels 16 and 12, seeking berthing information. Pilots are transferred to and from vessels by means of a launch. During the S.W. monsoon season, a long swell prevails at the port entrance and it is imperative that the vessels should give a proper lee, as the pilot launch may experience difficulties in coming alongside.

Outer Anchorage: When not berthing on arrival, deep drafted vessels should anchor about 7 miles West of Prongs Reef lighthouse outside the 20 m. contour line paying attention to stay clear of the submarine gas pipe-lines and the crossing submarine cables. The mud and shingle bottom is reported to be good holding ground. Pilots do not assist in outer anchorage. It is entirely up to Master's choice to find a suitable anchorage.

A long swell is present during the S.W. monsoon in the outer anchorage and at the entrance to the harbour. Visibility is often reduced by heavy rains during S.W. monsoon and by smoke haze which frequently prevails in the area from November to March.

Inner Anchorage: There are several anchorages available inside the harbour. The permissible draft at the anchorage varies from 15 ft. to 31.5 ft. Light draft vessel, depending upon the room availability, may be allowed by the Port Authority to proceed in to the port directly with the assistance of a Pilot to the assigned anchorage. The usual inner anchorage for merchant vessels is on the West side of the harbour, abreast of the city of Bombay. An area North of Sunk Rock is reserved for Naval vessels.

A vessel subject to quarantine will be instructed to anchor as convenient for boarding by the Port Health Officer.

Permissible Draft: There are no night restrictions, except at Oil and Chemical Jetty – Pir Pau. The minimum depth in the entrance channel to the harbour is 32 ft. below chart datum. The shallowest bar extends from a beam of the buoys at the entrance to abeam of Middle Ground Islet.

Deep draft laden tankers should enter at HW after having received instructions from Port Control (VHF Channels 16 and 12).

It is advisable to start heaving anchor 2 hours before HW and to make approach to the port entrance passing at about 1 mile North of Bombay Light Vessel. Then vessel should head towards the middle of the 2 entry buoys passing at about 8 cables South of S.W. Prongs Light Buoy.

Draft at Indira Dock and Ballard Pier Extension is subjected to dredging, soundings and rise of the tide. These drafts are declared by the Deputy Conservator of Bombay Port every month in the daily shipping list.

Permissible Lengths of Vessels: For Indira Dock: Up to 625 ft. in length and 85 ft. beam. Oversize vessels having LOA exceeding 575 ft. can still be accommodated in the Eastern arm of the dock up to a maximum LOA of 666 ft. and 93 ft. beam.

Ballard Pier Extension: Up to 750 ft. length × 95 ft. beam.
Ballard Pier: Up to 650 ft. length × 90 ft. beam.
Victoria Dock: Up to 460 ft. length × 62 ft. beam.
Princes Dock: Up to 500 ft. length × 61 ft. 3 in. beam.
Butcher Island Oil Terminal:
  Nos. 1 and 3 Berths: Up to 740 ft. length × 95 ft. beam.
  No. 2: Up to 560 ft. length × N.A.
  No. 4 Berth: Up to 984 ft. length × N.A.
Pir Pau Jetty: Up to 560 ft. length × 85 ft. beam.

Butcher Island: General: The terminal facilities are located on the Eastern side of Butcher Island and consist of a concrete jetty about 1,700 ft. long, having 3 pier heads, with dolphins at either end of pier head. The jetty carries a roadway and pipe-line and has berths for 3 vessels of various sizes. The berths are numbered from North to South as No. 1, 2 and 3. Each berth is provided with breasting dolphins. Each berth is further provided with mooring dolphins. A fourth oil berth South of Butcher Island has been constructed near the approach channel and is in operation. The oil terminal is administered by a Senior Dock Master, who works 24 hours on – 24 hours off.

Approach to Berth: From the port entrance, the vessel proceeds towards Butcher Island at slow speed (under the direction of Harbour Pilot) to avoid squat and maintain variable revolutions so as to reach Butcher Beacon at approximately slack water.

During the approach to Butcher Island, the vessel has to pass through inner harbour, where other vessels are anchored. Although these vessels are anchored at a designated anchorage under the supervision of Harbour Pilots to keep fairway channel to Butcher Island clear, the vessels are sometimes found to be outside the assigned anchorage, thereby restricting the size of the channel. Furthermore, caution should be exercised for vessels crossing the fairway channel and for the presence of numerous fishermen. Above Butcher Beacon, engines should be stopped and tried astern. This trial is compulsory before berthing at oil terminal jetty.

Light tankers are allowed to anchor at tanker anchorage awaiting berth or suitable tide. This anchorage is located 9 cables and 13 cables S.W. of Butcher Beacon. An emergency anchorage is established 4.5 cables N.E. of Butcher Beacon. Anchoring is prohibited in the area indicated on the B.A. Chart between Trombay Island and Butcher Island.

Tidal stream directions are not in line with the jetty. Ebb stream is at an angle of 15° facing Berths No. 2 and 3 and 20° with Berth No. 1. Berths No. 1 and 2 are quite protected from the flood stream effects by the surrounding shore. Berth No. 3 is quite exposed and the flood stream tends to push the vessel off the berth. Although the new berth No. 4 lies in the direction of tidal stream, which runs about N.E. – S.W. it does experience some strong tidal stream, pushing the vessel away from the berth and this has resulted in moorings breaking.

Deep Draft laden tankers moor at Slack/beginning of Ebb, always port side alongside. Light vessels may berth with either side alongside. There is room for swinging in front and North of berths.

Berth Limitation and Facilities:

				Draft	
				Up to 600 ft.	Over 600 ft.
Berths	LOA (ft.)	Beam (ft.)	Displacement (tons)	LOA (ft.)	LOA (ft.)
No. 1	740	95	70,000	33.4	32.1
No. 2*	560	NA	48,000	33.4	Nil
No. 3	740	95	70,000	35.1	33.1
No. 4*	984	NA	85,000	47.0 (for all vessels)	

*Note: Berth No. 2 is designed for vessels up to 740 ft. LOA with displacement of 70,000 tons, however, due to an accident during berthing, it has been downgraded.

Berth No. 4 was designed for vessels with displacement up to 150,000 tons, but due to some problems with tidal streams, it has been downgraded to 50,000 d.w.t. and max. draft of 42 ft. This is a temporary restriction. Therefore the vessel with displacement over 70,000 tons or draft over 42 ft. loading for Bombay should check latest information on Berth No. 4.

Mooring and Unmooring Operations: The usual mooring arrangement consists of 3 head, 3 stern, 2 breasts, and double springs. An offshore anchor is sometimes used. A large mooring gang is provided and 2 mooring launches assist.

With the exception of the spring lines, tankers are required to use fibre ropes. Since no capstan is provided for the springs, it is recommended to have them paid out and stored along the vessel's sheer strake in order to minimise the slack and to facilitate an easier operation for the mooring gang.

Mooring and unmooring times and conditions are decided by the Butcher Island Mooring Master. Usually no long delays are experienced.

Usually 2 tugs of sufficient power assist with mooring and unmooring operations. At times, there is difficulty in communication between tugs and Pilots. When berthing, tugs come alongside a beam of S.W. Elephanta.

Gangways: No shore gangways are provided so vessels' gangway should be used. Laden tankers should have a gangway on portside, some 20 ft. beyond the cargo manifold, ready to be put ashore as soon as the vessel has made fast. Hose gangs come aboard via the gangway; therefore, it is important to have the gangway placed promptly.

Pumping Over-the-Tide: There is 35 ft. depth (chart datum) alongside Butcher Island's berths. The tidal ranges above the chart datum, are from 3 ft. – 14 ft. during Spring tides and from 6 ft. – 11 ft. during Neap tides.

Pumping over the tide is a routine practice by the local oil industries which is only reluctantly accepted by Bombay Port Trust as owners and operators of all berths. However, this practice should not be considered by our controlled tonnage. Masters should load consistent with the height of the LW available at the time of the vessel's arrival at Bombay. At least 1 ft. UKC is required throughout the vessel's stay alongside.

Cargo Operations:

Crude Vessels: Vessels of 740 ft. LOA are routinely accepted. Spot approvals for vessels up to 780 ft. LOA may be granted with the provision that the adjacent berths are being left vacant.

4×10 in. ASA hoses are used on crude vessels. Vessels are allowed to arrive with blanks off and reducers in place. However, company controlled tonnage should not comply with this requirement as it is against a common safety rule. A shore crane is used, therefore the vessel's derrick is not required. Connecting hoses is carried out by a large and experienced gang. Product carriers usually load and discharge through 8 in. diameter ASA flange hoses.

1 or 2×24 in. shorelines may be made available. A pressure of 120 p.s.i. is allowable. Non-return valves are not provided at the shore manifold. Due to the length of lines, back pressures are commonly up to the maximum permissible of 120 p.s.i. It is advisable that cargo pumps are operated carefully, in view of the shore lines and submarine lines condition.

The terminal usually receives the parcel of crude loaded on top of residues, in a separate tank. Vessels may therefore, be requested to reduce the pumping speed, during the discharge of this parcel, on account of tank vent limitations.

In order to be flexible and not to interfere with the refinery discharge plan, it is advisable that vessels loading for Bombay allocate, for the slop contaminated parcel, a tank which can be discharged any time during the discharge, at refinery's request.

Product Vessels: Vessels arriving alongside for loading, should have clean ballast only, with all tanks washed and ready to load any product. Since changes in the cargo pattern occur very frequently, it is essential that vessels observe this requirement. No tank cleaning is allowed alongside.

For clean products, 3 lines are available at each dock: 1×16 in. for HSADO, 1×16 in. for kerosene and 1×12 in. for other clean products such as JBO, ATF 1A, Mogas, Avgas, solvents, etc. This line is always being kept full of water. Products are separated in this line by interface, if quality so permits, or by water plugs.

In the process of flushing, a small amount of water may be loaded on board the vessel. This amount of water has to be checked, calculated and included in deadfreight calculations.

The Shore Representative inspects the tanks, prior to loading, and seals the sea chests. He remains on board throughout the stay of the vessel, maintains communication and co-ordinates the activities with the shore. He should be provided with a cabin.

Early Departure Procedure is being practiced and Bills of Lading quantities are communicated to the vessel after sailing.

Discrepancies, if any, between ship and shore are to be protested by cable.

Fuel oil movements utilise a 24 in. diameter line which serves all 3 berths. The loading rate is about 500 t.p.h.

Tankers, loading fuels, have to arrive with clean ballast only, which is to be discharged overboard. Their slops and washings will be discharged ashore into a 22,000 bbl. tank through a 12 in. line. Ample notice and information of quantities of slops/washings is required.

Pollution and Safety: No facilities or equipment are available for combating an oil spill.

Several firemen of Bombay Port Trust are in attendance at the berth whenever a tanker is alongside. A fire line serves the 3 jetties. Each jetty is provided with 2 towers fitted with fire hydrants. A fire truck provided with a trailer pump is stationed at Butcher Island and can be directed to the jetties.

Fire wires must be hanging over the side on the off-side bow and quarter while alongside to enable tugs to connect readily in an emergency situation. The towing eyes should be maintained at water level.

Strict security is maintained on Butcher Island. Access to the oil jetty is from a small pier close Northward of the island where launches land and where a police check post is located. No boats are allowed alongside. All crew members are provided with a pass. Usually many dealers and salesmen visit vessels on business. However, all of them are in possession of a valid pass as the police authorise their shipboard trading.

Pir Pau Pier:

General: Pir Pau Pier is situated at the Northern end of Bombay Harbour in a locality called Trombay. Trombay is the area of the refineries of Bharat Oil Corp. and Hindustan Oil Corp.

Approach to Berth: The approach to Pir Pau Pier is made through the channel between Butcher Island and Elephant Island, thence through the Pir Pau dredged channel which is marked by buoys. Only daytime berthing/unberthing during HW is allowed. Caution should be exercised, while negotiating the sharp bend to enter Pir Pau dredged channel as cross currents prevail.

Mooring – Cargo Operations: A number of bollards laid throughout the length of the pier provide a suitable mooring layout for any size vessels up to 560 ft. LOA.

The fendering system, consisting of floating wooden rafts tied alongside, is rather poor. Occasionally some of these rafts are missing without notice. Vessels calling at Pir Pau Pier should have on deck some portable fenders, readily available as back up in such an event.

Pipe-lines' sizes vary from 6 in. to 12 in. and their condition is rather questionable. A loading/discharging rate of 150 t.p.h. for all products is considered good.

Lube Terminals at Commercial Docks:

General: There are 3 locations, within the commercial docks area, where lubes, vegetables oils and fats are discharged either through a pipe-line or into tank trucks: Ballard Pier Extension, Indira Dock Jetty End and Indira Dock Wharves 12A – 12B.

Approach: The approach to Ballard Pier and Indira Dock is made through a dredged channel crossing the shallows North of Middle Ground Islet. The current depth of this channel is 23 ft. below chart datum.

There is no night restriction for berthing/unberthing at Ballard Pier Extension, however, larger vessels' movements within the docks are during daylight hours only.

Ballard Pier Extension: This berth is ordinarily reserved for passenger vessels and container vessels. However, when it is lying vacant it can be used for lube discharge. Berthing/unberthing is allowed during day and night and at High Water Slack. The berth is a continuous solid concrete pier, fitted with rubber fenders.

No pipe-line is provided, therefore lubes are discharged into tank trucks at an average rate of 40 t.p.h.

Indira Dock: Berthing/unberthing is allowed during day and night and at any stage of the tide depending upon vessel's actual draft for the safe transit of the access channel. The Harbour Pilot brings the vessel up to the lock gate (outside Indira Dock), then Berthing Master takes over from Harbour Pilot who berths the vessel in the dock.

A 10 in. pipe-line is branched off to both locations, the Jetty End and Wharf 12A – 12B, which stretch out for about 10 km. to a tank farm. Depending upon the grades and consignees, lubes are also discharged into tank trucks.

The berths are continuous solid concrete and granite piers. Fendering consists of floating wooden rafts alongside Jetty End and wooden pads with rubber lining at Wharf 12A – 12B.

Berth Limitations:

Berths	*LOA*	*Beam*	*Channel Draft*	*Berth Draft*
Ballard Pier (Extension)	750 ft.	95 ft.	23 ft. + Tide	30 ft.
Indira Dock (Jetty End)	625 ft.	85 ft.	23 ft. + Tide	27 ft.
Indira Dock (No. 12A – 12B)	625 ft.	85 ft.	23 ft. + Tide	30 ft.

Services:

Bunkers: Diesel and Fuel bunkers are available at the 3 Butcher Island's berths, however, they are loaded by gravity, with a slow loading rate. If the vessel is in light condition, the gravity flow may not work due to the high freeboard. No bunkers are available at Pir Pau Pier. At the commercial docks only diesel bunker is available and is supplied by tank trucks.

Bunkering barges are available, however, much delay can be expected.

Bunker requirements should always be included in the first ETA message to minimise delays.

Fresh Water: Normally available in unlimited quantities, by pipe-line and at all berths, but at very low loading rates, ranging from 5 t.p.h. – 25 t.p.h. At least 24 hours' notice is advisable.

Repairs: Major repairs may be carried out afloat and in dry docks. There are several private and public ship repairers to do this work. The vessel can also be dry docked at Hughes Dry Dock, owned by the Port Authority. The maximum length of the dry dock without caisson is 304 m. with a beam of 30.48 m. The entry to the dry dock is from Indira Dock.

CALCUTTA: (Also see page 654)

INSERT BEFORE "AUTHORITY"

SHIP OPERATOR'S REPORT: January 1987

Location: The port is located on the left bank of the River Hugli about 129 km. above the river entrance off Sagar Island in the Bay of Bengal.

Pilotage: Pilotage is compulsory for all vessels over 100 gross tons. River pilotage which extends from Sandheads, 72 km. below Sagar Island, covers a total distance of 201 km. The River Pilot boards the vessel at Sandheads (Lat. 20° 59′ N., Long. 88° 14′ E.) and a Harbour Pilot boards the vessel at Garden Reach (Lat. 22° 33.5′ N., Long. 88° 17.5′ E.) for mooring vessels in the river or berthing in the docks. The movement of ships inside the docks is controlled by the Berthing Master.

Approach Channel: The Approach Channel to the main port requires considerable navigation skill. There are several sand bars and crossings of which Balary Bar is the most treacherous, as well as sharp bends in the river which the ships have to negotiate. These bars are subject to seasonal and, at times, sudden fluctuations both in depth and alignment of the channel, necessitating dredging on the shallow reaches. The channel is well marked with numerous navigational aids which consist of lighthouses, lightvessels and channel buoys, automatic tide gauges and signals and river marks; thus facilitating navigation both by day and night. Surveying and charting of the river is continuous and depths over the river bars are forecast daily. Besides navigation aids, a fleet of dredgers, barges, a river survey vessel and hydraulic research vessel are employed to provide safe navigation to shipping.

Permissible Draft: Drafts are subject to fluctuations according to the rise of tide and the condition of controlling bars. The port of Calcutta publishes a monthly draft forecast about 6 weeks in advance, copies of which are available from the Harbour Master's Office (River) in Calcutta. The River Hugli can generally be navigated as far as Calcutta during the period:

(a) June to October
At HW Springs by vessels drawing 8.7 m.
At HW Neaps by vessels drawing 8 m.
(b) October to June
By vessels drawing between 6.7 m. to 8.2 m.

However, there are times during the above period, when the permissible draft could decrease to as low as 5.5 m. before increasing again. Therefore it is strongly recommended that Masters of vessels loading for Calcutta should consult the monthly fresh water draft forecast of River Hugli, issued by Calcutta Port, and should load accordingly in order to avoid unplanned delays outside the river at Sandheads.

Communication:

Radio: There are W/T stations at Ram Nagar, Hugli Point and Haldia. Long range and short range W/T service for navigational messages is available for ships at sea within the range of 850 km. and 24 km. respectively.

VHF: There is a VHF network in operation in the port as an essential means of communication. Apart from Ram Nagar, Hugli Point and Haldia, VHF communication facilities are also available on the pilot vessel, survey vessel, dredgers and other vessels of the port.

The port has 2 pilot vessels fitted with W/T and VHF. These vessels maintain a continuous watch on 500 kHz and receive ETA messages from incoming vessels. At Sandheads, vessels in the vicinity may communicate with the pilot vessels on VHF Channel 12.

Calcutta Port issues time of embarking Pilot at Sandheads to meet required fresh water drafts for a particular day. Therefore Masters of all incoming vessels should take note of time for embarking Pilot and should radio their ETA Sandheads with names of local Agents, destination, deepest FW draft, LOA and speed of the vessel to the local Agents and to Sandheads (Call sign: "VWST") as soon as possible. There is slight reductions in FW draft of vessels, whose speed is below 12 knots.

Traffic Control: It is established and co-ordinated by the Harbour Master. Traffic information and navigational warnings are given on 500 kHz. The general rules governing traffic in the river are as follows:

All vessels going with the tide will have the right of way. Navigation in the river is carried out exclusively on Pilot's advice at times and tidal conditions established by the Port Authority. Night navigation is permitted. Since the depths at numerous locations change continuously, the River Pilots are notified of depth changes and traffic movements through a system of visual signals and via ship's radio on 500 kHz.

Special Feature: Calcutta being a river port is subjected to a "Bore Tide" condition. Vessels at river moorings or jetties are subjected to sudden surges on their moorings during flood tide. The "Bore" takes place only during certain periods, which are predicted a year in advance and last for 1 day to 5 days.

During the "Bore", no vessel over 152 m. in length in Calcutta and over 160 m. in length in Buj Buj will remain in the moorings/jetties. The max. draft of vessels in the river moorings/jetties will also be restricted to 5.5 m. at Calcutta and 6.1 m. at Buj Buj. Vessels which cannot remain in the river moorings/jetties are taken inside the docks where ships are not influenced by "Bore" tidal conditions. Those vessels which remain in the river are provided with extra shore mooring ropes and tackles.

Bunkers/Fresh Water: Adequate facilities exist in the port for the supply of drinking water to ships in the river moorings and at Buj Buj jetties but not at "C" Berth in N.S. Docks.

Oil bunkers can be supplied by pipe-line or barge at Buj Buj and N.S. Docks. Only 1 grade of intermediate fuel oil and diesel oil are available.

Repairs: The existing facilities comprise 5 dry docks for all major surveys and underwater repairs. Of the 5 dry docks, there are 3 docks up to max. 515 ft.×64 ft. in Kidderpore Docks and the remaining docks of max. 516 ft. and 75 ft. are in N.S. Dock. The entry into docks is from the unpounded dock basins and not directly from the river.

N.S. Dock Oil Terminal (previously known as Paharpur): The terminal is located at "C" Berth in N.S. Docks; which is in line with "B" Berth used for general cargo. Therefore the max. length of a vessel which can berth at "C" Berth depends upon the size of the vessel at "B" Berth up to a max. of 172 m. The shore facilities are owned by the government and used by various oil companies for lube products only.

The access to cargo manifold platform is by steel walkway fitted with wooden covering, some of which is missing or in poor condition. The berth structure consists of the cargo manifold area and 2 mooring dolphins, 1 at each end of the manifold area, which are made of concrete and filled with wooden beams to avoid metal to concrete contact. The manifold size is 8 in. and 1 length of 60 ft. hose sufficient for ship/shore connection is provided.

There are a few fire hydrants located near by but no oil spill control equipment is available at the berth.

Buj Buj Oil Terminal (also known as Budge Budge): The terminal is located about 28 km. downstream from N.S. Docks. There are now 5 out of 8 oil berths in operation. This is the major oil terminal for the port of Calcutta and handles all grades of petroleum products, except crude and LPG.

The oil berths are located in the river and have floating pontoons. The moorings consist of 4 mooring buoys of old construction. 8 ship's lines are sent to 2 buoys and 2 shore mooring chains to the remaining 2 buoys. The buoys are provided with a ring on top, through which the ship's lines are passed and secured. The mooring chains are made fast under the buoy to the buoy pendants and divers carry out these operations. 1 or 2 floating pontoons are provided at each berth. The pipe-line is carried on a steel walkway fitted with wooden steps which also acts as an access to the pontoon. The pipe-lines end on the pontoon where the manifold is located. The shore manifold is connected to the ship's manifold by hoses of 6 in., 8 in. and 12 in.

It is essential that vessels ensure prior to arrival that the detachable link of the first shackle can be easily opened. Inability to send the cable to the buoy may cause serious delays.

Berth Limitation and Facilities:

Berth	*Length* Min. – Max. (ft.)	*Beam* Max. (ft.)	*Product Handled*
1	455 – 620	85	Fuel oil, diesel, lube
2	280 – 380	85	Lube
3	350 – 460	85	Bunkers
5	435 – 620	85	Clean products only
8	425 – 620	85	Clean products, solvents and petro-chemicals

Facilities Available:

Slops: No facilities available at the terminals.

Pollution: No oil spill control equipment available at the terminals. In case of oil pollution, private contractors are engaged to clean up the area with the assistance of the fire brigade.

Security: Terminals and berths are considered restricted areas. The whole area is fenced and the gates are guarded. Watchmen are available and are considered essential by local Agents.

Safety: Fire fighting truck/boats are available. There is no safety check list provided. Safety is left entirely to the ship's personnel.

ADD BEFORE "AUTHORITY"

MADRAS: (~~Also see~~ page 663)

SHIP OPERATOR'S REPORT: January 1987.

General: Madras is an artificial harbour on the coast of Tamilnadu State. Protected from sea and swell by 2 breakwaters, but is vulnerable to cyclonic weather. The oil berth is located in Bharathi Dock. The Madras Refinery receives crude from Bharathi Dock Oil Terminal.

Lube and non-flammable liquid cargo are also handled at West Quay No. 1/North Quay – which is also a general cargo berth.

All terminals and berths within the port limits are owned and operated by Madras Port Trust.

Communications: All traffic by W/T via Madras Radio (call sign: "VWN"). When within VHF range, communication with Madras Pilot can be established on VHF (Channels 16 and 14), which is located at the Port Signal Station.

Laden tankers should include in their initial ETA message: Deepest draft, actual displacement, cargo quantities, Shipper(s), Consignee(s) and name of local Agent.

The above information should be copied to:

1. Agent Madras.
2. Indian Oil Madras. Telex: 041-7168 for SR S & D Manager.
3. Indlub, Madras. Telex: 041-6345.
4. Indian Oil Bombay. Telex: 011-71656 for SR Shipping Manager.

ETA should be subsequently confirmed (or revised) 3 days, 2 days and 1 day prior to arrival.

Radio Pratique is permitted and the following information should be cabled to "Quarantine Madras", maximum 12 hours and minimum 4 hours prior arrival:

AAA Name of vessel and call sign.
BBB ETA Madras – local time.
CCC Maritime Declaration of Health has negative answers to all questions.
DDD No monkeys on board.
EEE Names and dates of ports visited within last 30 days.
FFF Ship healthy – request Free Pratique.

Approaches: When within VHF range, call "Madras Pilot" on Channel 16 stating ship's name, ETA and deepest draft. There are 2 waiting areas for Pilot which are clearly marked on the chart. The first waiting area is for ships over 11 m. draft and the second is for ships under 11 m. draft. If it becomes necessary to anchor, Madras Pilot will advise the anchorage position. The anchorage has good holding ground but is exposed to sea and swell.

Prior to the Pilot boarding, the pilot office will advise the vessel by VHF, at short notice, to proceed to the waiting area where the Pilot will board the vessel. Pilotage is compulsory. The pilot boarding area is about 1 km. to 1.5 km. seaward of Fairway Buoy.

The depth of water in the Approach Channels is as follows:

Outer Channel = 19.5 m.
Inner Channel = 18.9 m.
Turning Channel = 18.3 m.
Approach to Berth in Bharathi Dock = 17.7 m.

Permissible Draft and Length of Vessels: Oil tankers carrying crude and/or refined petroleum products normally berth at Bharathi Docks Berths I, II and North Groyne Mooring, while tankers carrying lube oil berth at West Quay I.

Oil tankers may berth at Bharathi Dock II, which is meant for loading of iron ore, if there is no vessel loading ore. Similarly, vacant container terminal berths can be used by tankers, but only for transhipment from mother vessel to daughter vessel and shore discharge for all products with flashpoint above 40°C.

The berth parameters and products handled are as follows:

Name of Berth	*Maximum size of vessel that can safely berth* *Length* (m.)	*Beam* (m.)	*Draft* (m.)	*Products handled*
Bharathi Docks I (Exclusive Oil Jetty)	345	No restriction	14.6	Crude, fuel oil, MDO, naptha, motor
Bharathi Docks II (Iron Ore Jetty) Oil tankers are handled at this berth when there is no iron ore vessel	345	No restriction	15.0	Regular and premium gasoline, kerosene Aviation turbine fuel, high speed diesel
Mooring (North Groyne)	210	No restriction	9.1	Fuel oil, MDO, premium gasoline, kerosene, aviation turbine fuel, high speed diesel
West Quay I/ North Quay	152.4	No restriction	7.9	Lube oil
Container Terminal Berth	330	No restriction	13.4	Lube oil

Bharathi Dock Oil Terminal: Bharathi Dock is an extension of old Madras Harbour, built mainly for the export of iron ore and import of crude oil. Berth I is located along the inside of breakwater in the form of "T" head jetty with 2 mooring dolphins each side of the berth. There are 2 berths – Bharathi I – exclusively for oil tankers and Bharathi II – designed for ore vessels but can be used by oil tankers, when the berth is vacant.

There is also a mooring berth for oil tankers inside the main harbour where vessels are secured with 2 anchors, and stern to the harbour wall/North Quay Breakwater.

Bharathi Dock I is also used for ship-to-ship transfer as well as for ship-to-shore transfer. Both operations are performed while alongside the dock.

General Cargo Berth Tanker Handling: The West Quay I/North Quay share a common facility which is connected to tanker with a 6 in. hose to receive lube.

BOLD CAPS. ADD AFTER "DELAYS"

Indonesia

~~**BIMA:** (Also see page 684)~~ **(See ~~Late~~ Plan~~s~~)**

~~(b)~~ BIMA MARINE TERMINAL: 05.46S. 107.04E

LOCATION: Bima Marine Terminal is an open, unsheltered mooring in the Java Sea, located approximately 020°×24 nautical miles from Jakarta.

There are 3 standard type Single Buoy Moorings situated as follows:

1. "Citra Ayu" SBM (Buoy No. 7, Storage Tanker Buoy).
   Lat. 05° 46′ 02″ S., Long. 107° 04′ 14″ E.
2. Storage/Export SBM (Buoy No. 8, as standby SBM).
   Lat. 05° 45′ 25″ S., Long. 107° 04′ 52″ E.

This SBM can be used either as a storage tanker buoy or as the export tanker buoy whenever required.

3. Export SBM for tankers loading from "Citra Ayu" (Buoy No. 9).
   Lat. 05° 44′ 49″ S., Long. 107° 05′ 29″ E.

"Citra Ayu" is a chartered storage tanker used as the main floating storage and export facility at Bima Terminal.

THE FOLLOWING ITEMS ARE OF PARTICULAR IMPORTANCE:

1. No dirty ballast.
   Tankers with dirty ballast will be rejected and will have to tender a new Notice of Readiness upon second arrival.
2. No shore leave.
3. No crew changes. If emergency conditions prevail, for humanitarian reasons, exception to the foregoing may be permitted. All expenses incurred will be for ship's account.
4. No stores available.
5. No clinic available.

6. The laws of Indonesia govern this terminal and all personnel are urged to abide by them.
7. During daylight hours the Indonesian Flag must be flown throughout the vessel's stay in port.
8. Bima Terminal time is GMT plus 7 hours throughout the year.
9. *No bunkers are available.*
10. Pertamina Directorate of Shipping and Telecommunications Jakarta handles all Agency matters for tankers.
11. The unit of currency is the Indonesian Rupiah. The rate of exchange varies from time to time. The Master can obtain the current exchange rate from the Agent.
12. There are no Consulates available at Bima Marine Terminal. However, there are many Embassies and Consulates represented in Jakarata.
13. Language of the port is English and Indonesian.
14. Only authorised personnel or visitors are permitted on the storage barge and/or export tanker.
15. No fresh water is available.
16. No slop tanks are available.
17. The crude oil testing laboratory is equipped to perform the following tests: API Gravity, B.S. & W, Pour Point and RVP. Any additional tests that may be required will be performed in Jakarta.
18. For convenience, mail for personnel on incoming tankers may be sent to the Pertamina Agency Jakarta Office for delivery to the tanker when it arrives at the Bima Marine Terminal. Except on an emergency basis, spare parts or other material will not be accepted for delivery to incoming tankers.

DOCUMENTS: The Agent prepares the Ship's Documents Check List Form to check the validity of each document.

These documents are: Certificate of Registry, Ship's Construction Certificate, Load Line Certificate, Safety Equipment Certificate, Safety Radio/Telegraphy Certificate, Cargo Gear Certificate and Derat Certificate or Derat Exemption Certificate. This List is then delivered to the Harbour Master with the following documents attached: Last Port Clearance, Crew List approved by the Immigration Officer and Light Dues Receipt if arriving from another Indonesian port.

The Harbour Master issues a Port Clearance at departure provided clearance is also granted by the other governmental authorities. A Panamanian Port Clearance for Panamanian Flag vessels is not required at Bima Terminal.

The Immigration Officer requires 2 copies of the Crew List and will check the ship's articles and the passports of the crew. When these documents are found to be in order, an Arrival Clearance will be marked on the Crew List.

Cargo Documentation: Documents such as Bills of Lading, Certificate of Quality, Certificate of Quantity, Dry Certificate, Ullage Certificate, Loading Time Report, Certificate of Origin, Cargo Manifest and Master's Receipt of Documents/Samples, etc., are prepared at the Terminal.

When the tanker has been loaded, the documents shall be completed and be taken aboard the tanker for the Master's signature.

Signing of these Documents by the Master will take place at the same time final departure clearance formalities are being carried out.

Notes of Protest, if any, should be handed to the Mooring Master for further delivery to Atlantic Richfield Indonesia Inc., Jakarta.

Please note that the Mooring Master will *acknowledge receipt of the Note of Protest only and is not authorised to accept such letters.*

Departure Procedure: Prior to the vessel's departure, the Immigration Officials require 6 copies of the Crew List to be marked for "Departure Immigration Clearance", and duly signed, it will be distributed as follows:

Master of the vessel	1 copy
Harbour Master	1 copy
Customs	1 copy
Pertamina Agent	1 copy
Immigration	2 copies

Upon presentation of the Crew List which is signed and marked for Departure Immigration Clearance the Harbour Master will issue the Port Clearance.

Final clearance formalities will be carried out aboard the tanker after completion of loading.

Before leaving the terminal area the Master should advise the terminal the vessel's ETA at destination through the Mooring Master.

PILOTAGE: Tankers waiting to load shall wait their turn in the recommended anchorage area, and shall maintain radio-telephone contact with the terminal using the International Marine Calling and Safety Channel 16 (156.8 MHz) for terminal instructions.

The Mooring Master will act on behalf of the company to acknowledge receipt of tanker's Notice of Readiness.

Masters of tankers are reminded that due to operational reasons, ship's Notice of Readiness (N.O.R.) will not be accepted between the hours of 1630 and 0530 unless the company, in order to accelerate ship's turn around time, is willing to accept same. In any case, N.O.R. will not be accepted for a time earlier than when;

(a) The Master has received the Mooring Master onboard.
or
(b) The tanker has anchored within the recommended anchorage area, and has advised the terminal the time of anchoring.

Exception to (a) and (b) above will be if the tanker is within the anchorage area awaiting arrival of the Mooring Master and has been requested by the terminal not to anchor. In this case N.O.R. will be accepted from the time the terminal requested the ship not to anchor.

In order to meet safe and efficient marine operations, tankers are recommended to arrive during daylight hours. However, if on ship's arrival the required Loading Clearance is not yet received at Bima Marine Terminal then, in this case, the acceptance of N.O.R. will be the time when such clearance is received on the storage tanker "Citra Ayu" or whenever the tanker is secured.

The company reserves the right to decline to berth a specific tanker if its condition or facilities are unsafe for berthing or loading even though the berth may be open to other tankers.

The decision of Atlantic Richfield Indonesia Inc.'s Terminal Section Manager or his designated assistant to berth or not to berth a tanker shall be final.

ANCHORAGE: For tankers requested to anchor, the recommended anchorage area is an area Northeastward from the single point mooring buoys enclosed by a line drawn through the following positions:

A. Lat. 05° 43′ 00″ S., Long. 107° 06′ 00″ E.
B. Lat. 05° 41′ 30″ S., Long. 107° 07′ 10″ E.
C. Lat. 05° 42′ 50″ S., Long. 107° 08′ 37″ E.
D. Lat. 05° 44′ 20″ S., Long. 107° 07′ 28″ E.

Prior to arrival Masters of tankers should contact the terminal for instructions concerning anchorage positions.

Refer to "Radio" for further instructions.

Under no circumstances should an export tanker enter the Restricted Area without a company Mooring Master aboard.

The attention of Masters is drawn to the existence of underwater pipelines in the Restricted Area.

APPROACHES: Approach information can be obtained by radio from the terminal. Under normal weather conditions, if a tanker is scheduled to berth upon arrival, the Mooring Master will board such tanker in close vicinity of the mooring area.

In addition to the 3 single point mooring buoys for export tankers and the storage tanker, oil wells and production structures are located South from the storage barge which constitute a hazard to navigation for mariners.

SBMs, Storage Barge and Structures within Bima Marine Terminal area display the following characteristics:

(1) *Storage: "Citra Ayu" and SBM (Buoy No. 7):*
By day, the black ball as required by Rule 30, paragraph A of the Regulations for Preventing Collisions at Sea. Storage barge at night displays the lights for a tanker at anchor as required by the Regulations for Preventing Collisions at Sea and is equipped with automatic fog signals at the bow and at the stern.
The "Citra Ayu" SBM (Buoy No. 7) shows a white light flashing every second, visibility 5 miles.

(2) *Standby Storage/Export SBM and Export SBM (Buoy Nos. 8 and 9):*
(a) A white light flashing every second, visibility 5 miles, mounted on the rotating deck of each SBM. All Export SBMs are fitted with radar reflectors.
(b) 1 yellow coloured light buoy marked with yellow cross on top and yellow coloured light flashing period 2 seconds (0.5 second flash + 1.5 dark), 4 miles visibility equipped with radar reflector.
Position of the light buoy: Lat. 05° 41′ 10″ S., Long. 107° 07′ 20″ E.

(3) *Crude Oil Production Platforms Facilities:*
There are 5 crude oil production platforms, 32 wells, 1 processing platform and 1 quarters platform within the Bima Marine Terminal Area.

P.A. Lat. 05° 47′ 15.0″ S., Long. 107° 04′ 00.0″ E.
P.B. Lat. 05° 47′ 42.5″ S., Long. 107° 02′ 28.0″ E.
P.D. Lat. 05° 46′ 39.8″ S., Long. 107° 02′ 12.5″ E.
P.E. Lat. 05° 47′ 16.0″ S., Long. 107° 02′ 04.0″ E.
P.F. Lat. 05° 48′ 07.0″ S., Long. 107° 01′ 48.0″ E.
PCP (Process Platform)
Lat. 05° 47′ 17.0″ S., Long. 107° 03′ 02.0″ E.
PCS (Quarters Platform)
Lat. 05° 47′ 19.0″ S., Long. 107° 03′ 04.0″ E.

In addition to the above specified obstructions and navigational aids, all platforms display interrupted quick flashing white lights.

The storage barge, flow stations, and quarters platform will brightly illuminate the areas around them at night through the use of normal working lights.

RESTRICTIONS: Maximum distance bow to manifold is 500 ft.

MAX. SIZE: 250,000 d.w.t. Depth of water in approaches and at buoys is 110 ft.

HEALTH/IMMIGRATION/CUSTOMS: In accordance with practice in Indonesian Ports, Quarantine, Immigration, Pilot and Call Sign flags must be displayed by all vessels approaching Bima Marine Terminal.

These signals are as follows:

Sunrise to sunset: Quarantine Flag "Q"
Sunset to sunrise: Signal lights (red over white).

The "N" flag should be flown until the Immigration Officer boards the ship.

The "G" flag (request for Pilot) should be flown until the Mooring Master boards. The vessel should also fly its Call Sign. As soon as the Mooring Master boards, the "G" flag should be replaced by the "H" flag which signifies that the Pilot is aboard.

Indonesian Immigration, Customs, Harbour Master and Quarantine Officials will board the vessel after arrival to grant clearance.

Each tanker entering the Port of Bima must have requested and been granted Flag Dispensation prior to its arrival. At the same time, application is made for Provisional Pratique through the Directorate of Quarantine and, if granted, a cable advice is sent to the Harbour Authorities. Port Health Clearance is issued prior to tanker's arrival and is also valid for Departure Clearance. If Provisional Pratique is not granted then a Port Health Officer will be provided.

All the foregoing are arranged through and by the Agent.

Each crew member should be in possession of an International Vaccination Card.

Cigarettes, cigars, tobacco, matches, spirit, wine, beer, perfume, arms, ammunition and possibly other items have to be locked up under Customs seal from time of arrival of ship in port until time of leaving territorial waters.

Each person is allowed to keep 200 cigarettes or the equivalent in grams of tobacco or cigars. Special allowances are made for the Master under special circumstances.

After the ship is all secured, the Customs Officer will seal the stores. If arriving from a foreign port, the Agent will prepare the General Cargo Declaration Form stating the cargo onboard the tanker and attaching appropriate shipping documents. If the tanker is arriving from an Indonesian Port, the necessary documents will be presented to the Government Officials at Bima Marine Terminal whereupon an arrival clearance will be granted.

RADIO: *Advice of Arrival by Cable or Telex:* It is important that all incoming tankers advise Bima Marine Terminal 72 hours and 48 hours before ETA, giving the best estimate of ship's arrival at the terminal, via:

Cable Address: Ardjak, Terminal Section, Jakarta
Telex: 011-47390 Jakarta.

Time to be used for ETA is "Golf" (local) Time Zone of GMT plus 7 hours throughout the year. The first message should also include the following information:

1. Name of tanker and Radio Call Sign.
2. Cargo requirements.
3. De-ballast time. (Note: if a separate/permanent ballast system is fitted, ability of ship to load crude oil and discharge ballast simultaneously must be stated.
4. Maximum loading rate.
5. Arrival draft, forward and aft.
6. Last Port of Call.
7. Confirm that vessel has clean Bill of Health.
8. If there is any sickness aboard, give whatever information is available as to the possible type of sickness.
9. If cholera inoculation required, advise number required.
10. Distance in feet from the bow to tanker's loading manifold.

Further ETA messages should be sent to Bima Marine Terminal via the above cable address or telex number when the tanker is 24 hours and 12 hours distant from the terminal and any other time, if any appreciable change occurs in the original ETA or subsequent ETA's.

RADIO COMMUNICATIONS:

(1) VHF/FM Radio Telephone: (International Marine Calling and Safety Channel 16. Frequency 156.8 MHz).

Masters are recommended to use this system when they arrive within radio range of Bima Marine Terminal, particularly when approaching the port, if poor visibility exists the tanker's approach may not be observed. Attention to VHF communications may be the only means of avoiding delay in berthing.

During berthing, the ship's radio will be under the sole control of the Master, and the storage barge radio will be under the sole control of the Terminal Superintendent or his assistant. Masters are reminded that if tankers are requested to anchor to await berthing, *it is their responsibility to maintain constant listening watch on VHF Channel 16* to receive terminal instructions.

Any delay due to failure to maintain a constant watch on Channel 16 will be for the ship's account, and will not be included in Calculation of Lay Time.

Bima Marine Terminal is equipped with VHF/FM Radio- telephone sets and continuous watch is maintained on Channel 16 (156.8 MHz) and frequency 157.725 MHz.

Tankers approaching the terminal should make initial contact on Channel 16. For subsequent inter-ship communication within the terminal a "Handie Talkie" VHF radio frequency 157.725 MHz will be used by the Mooring Master. This frequency will not be for general purpose use, unless clearance is obtained by the terminal. This is required for safety reasons.

Should all radios on the tanker become inoperative, the emergency signal i.e. continuous blasts on the ship's whistle will be sounded to notify the terminal of the radio failures. Upon hearing this signal from a loading tanker, the storage barge will immediately stop loading to the Export Tanker until communications have again been established.

(2) High Frequency Single Side Band Radio Telephone: A voice message from incoming tankers may be relayed by HF/SSB. Atlantic Richfield Indonesia Inc., located in Jakarta, Indonesia, is interconnected to Bima Marine Terminal via local communications system and maintains a continuous watch on HF frequency 7320 kHz (upper side band A3J mode. 100 watts, vertical whip antenna, call sign "8GJ9").

(3) Pertamina Control Radio Stations – HF/SSB: In the event incoming tankers are not able to contact Bima Marine Terminal on the foregoing VHF/FM frequencies or by HF/SSB, Pertamina maintains coastal radio stations located in Jakarta and Merak.

Pertamina Jakarta Radio, call sign "PKI 2" may be contacted on HF/SSB using the following frequencies and during the following service hours:

Frequency (kHz)	*Hours (GMT)*	*Keep Watch (kHz)*

Masters should request the Pertamina Coastal Radio Station to relay the necessary information to Atlantic Richfield Indonesia Inc., Jakarta c/o Terminal Section during office hours and radio operator after office hours, by Tel: 737474 (18 lines), or by Pertamina internal telex system number 18 which is the designated number for Atlantic Richfield Indonesia Inc.

TUGS: *Mooring Launches:* For running lines as required, also for transporting Government Officials, Agents and other authorised personnel to and from the export tanker, 1 suitable mooring launch will be available.

There is also 1 tug available to assist mooring/unmooring and to transport Government Officials to and from the export tanker as required.

BERTHING FACILITIES: *Single Buoy Mooring for Export of Crude Oil:* SBM No. 8 is designed with double function capability i.e. as a storage SBM and an Export SBM. SBM No. 8 is designed, during reasonable weather conditions, to handle export tankers up to 250,000 d.w.t. Export SBM No. 9 is designed to handle tankers up to 250,000 d.w.t., weather permitting. Each of the above loading buoys is equipped with a dual 24 in. circumference floating braidline mooring rope together with anti-chafe chains (length 26 ft.), so arranged as to avoid chafe to the mooring ropes while tankers are at the buoy.

The crude oil loading hoses are to be connected to the ship's manifold on the port side of the export tanker. Tankers arriving are requested to have the derrick on the port side raised and rigged, ready to lift aboard the terminal equipment.

Crude oil tankers are loaded through 2 strings of 20 in. I.D. floating hoses extending from each Export SBM, connected to the tanker's manifolds by rail hoses of 16 in. I.D. All crude oil tankers not having 16 in. hose connections should provide their own reducers in such a way as not to cause any delay in the hose connecting operation. On Export SBM's No. 8 and No. 9 the length of the hose strings is 900 ft.

For crude oil tankers intending to load at Bima Marine Terminal, the distance from the bow to the loading manifold should not exceed 500 ft.

The minimum loading rate at Bima Marine Terminal for crude oil tanker is 15,000 bbls.p.h. Any tanker arriving unable to receive crude oil at the above rate may be rejected. The storage barge loading to tankers on SBM No. 8 or No. 9 can accomplish a maximum loading rate of approximately 35,000 bbls.p.h. through meters.

In order to save time as well as to make the berth available for others, it is requested that ships receive crude oil as fast as it can be delivered, with due regard for safety.

Masters are reminded that for safety reasons, it is advisable to have the ship half loaded as soon as possible. Rate can be reduced for topping off tanks. When requested by the ship to stop, cessation of crude oil flow is almost immediate.

Masters are also advised that the minimum quantity tankers can load at Bima Marine Terminal is 100,000 bbls. and the maximum is 1,200,000 bbls. At the sole discretion of the Terminal Manager or his designated assistants and based on written request from the Master/Offtakers, tankers may be allowed to load up to 1,500,000 bbls. ±5%. However, if the quantity to be loaded exceeds 1,200,000 bbls., Offtaker/Shipowner(s) will be required to state that they waive any demurrage incurred due to waiting on cargo and/or berth for loading.

Storage Tanker "Citra Ayu": The Company's Main Offshore Terminal Administrative Office, Storage and Laboratory for testing crude oil stock at Bima Terminal is a 236,000 d.w.t. storage tanker named "Citra Ayu" of Bahamian registry.

Overall length of the barge is 1,067 ft., and total crude oil capacity 1,608,000 gross barrels.

Crude oil from the "Citra Ayu" is delivered to tankers through Positive Displacement Meters, of which there are 4, each having a maximum capacity of 12,500 bbls.p.h.

The "Citra Ayu" is moored to SBM No. 7 in position Lat. 05° 46′ 02″ S., Long. 107° 04′ 14″ E.

Export tanker loading crude oil from "Citra Ayu" will be moored to SBM No. 9 or SBM No. 8.

Position of SBM No. 9: Lat. 05° 44′ 49″ S., Long. 107° 05′ 29″ E.
Position of SBM No. 8: Lat: 05° 45′ 25″ S., Long. 107° 04′ 52″ E.

Zu-Bima Crude Specifications:

API Gravity at 60°F: 18.5 – 20.4
Reid Vapor Pressure: 0.7 – 0.9
Sulphur, % Wt.: 0.10 – 0.14
Kinematic, Viscosity at 100°F: 218.7 – 692.1
Pour Point: 30°F – 50°F
Carbon Residue, % Wt.: 4.75 – 8.29
B.S. & W, % Vol.: 0.10 – 0.60
Flash (TCC): 12.6°F – 144°F

MOORING/LOADING/UNMOORING: Bima Marine Terminal will operate 24 hours a day, 7 days a week. Tankers will normally be berthed during daylight hours, weather and other circumstances permitting. In special circumstances at the sole discretion of the Company Terminal Superintendent, night berthing may be allowed if all conditions are favourable.

Unmooring will be carried out at any hour.

Tankers to be moored or manoeuvred at Bima Marine Terminal will be boarded within the anchorage area by the Company Mooring Master. Under normal weather conditions if a tanker is scheduled to berth on arrival, the Mooring Master will board such vessel in close vicinity of the mooring area.

All such manoeuvring of ships shall be done only in accordance with the advice of the Mooring Master, subject to the understanding that in all cases and circumstances the Master of the tanker being manoeuvred shall remain solely responsible on behalf of his vessel's owners for the safe and proper manoeuvring of his vessel.

The ship's Master or one of his designated and qualified deck officers, must be on the navigating bridge at all times while the vessel is being manoeuvred.

The Mooring Master will report unsatisfactory conditions to the Company Terminal Superintendent who may in turn, reject the tanker until corrections are fully made. All costs accruing therefrom will be for the vessel's account.

Before loading, the tanker's cargo tanks are to be inspected and if suitable for loading crude oil, a notation signed by both the Terminal Representative and Vessel's Master to this effect will be made on the Company Dry Certificate.

The Company Terminal Superintendent or his designated assistant, shall be the sole authority to decide when the port is closed due to unsuitable weather conditions.

Various combinations of wind, sea and tidal conditions also the size, length, ballasted trim and handling qualities of a vessel can affect the decision to berth a vessel at Bima Marine Terminal. All these factors have to be evaluated before a final berthing decision is made.

Delays to vessels using Bima Marine Terminal due to the port being closed because of bad weather conditions shall not be computed as used Lay Time when compiling vessel's turn around time.

Request for the terminal to stop the flow of cargo at a predetermined tonnage must be in writing. The request must include the statement by the ship's Master that the Company will not be held responsible for any error and that in case of the vessel being overloaded the excess cargo cannot be pumped back to the storage barge. The ship's Master will also be held responsible for any spills caused by this request.

The ship's Master is responsible to ensure that no communication by radio is allowed within the terminal area.

Unauthorised radio communications will cause cessation of all operations except clearing of the berth, and the vessel's Notice of Readiness will be immediately nullified.

The Master of each tanker will be given a copy of the *Conditions of Port Use of Bima Marine Terminal* which he will be required to sign before the vessel proceeds to berth.

The vessel's personnel are responsible for the safety of the vessel and must take all necessary precautions, whether or not so advised by the Mooring Master, having in mind the hazards of the operation because of the products being handled, weather conditions and any other circumstances requiring special care or caution.

Ships are requested to have a pilot ladder safely and securely rigged ready for immediate use and long enough to reach the Mooring Master's launch.

A combination of pilot ladder and ship's accommodation ladder, so arranged that personnel, boarding the vessel can first use the pilot ladder until part way up the vessel's side, and then transfer to the accommodation ladder is recommended, especially on very large tankers.

A light line should be ready to take aboard the Mooring Master's equipment.

Tanker will provide a broad lee for the Mooring Master both when boarding and leaving the ship. Adequate explosion proof lighting at night must be provided near the pilot ladder and manifold connection area. During loading, overside lighting must be provided in the vicinity of sea valves and floating hoses.

During a tanker's stay at the Export SBM, emergency towing wires shall at all times be hung over the ship's stern on each quarter of the vessel. These wires shall be secured on the inboard bitts to enable the vessel to be towed away should the need arise. They must be tended throughout to keep the eye of the wire not more than 2 ft. above the water.

Before any crude is loaded all ship's scuppers on main decks must be plugged and cemented oil tight. Approved mechanical means of closing scuppers may be accepted.

It is absolutely essential that extremely careful supervision be exercised by officers of all tankers while loading operations are in progress.

A responsible ship's officer is required to be on duty continuously while the tanker is being loaded. He will be assisted by an adequate number of ship's personnel in these operations.

It is the responsibility of the vessel to ensure that all mooring lines are properly tended on loading tankers. The Mooring Master at any time, may direct an additional ship's line to be secured to the buoy and this line to be hove up or slackened off under the supervision of a responsible ship's officer so as to prevent the vessel overriding the buoy. *At all times sufficient crew must be available* to carry out under the supervision of a responsible officer instructions given by the Mooring Master.

Masters of loading tankers are advised that raising, lowering, connecting and disconnecting of oil loading hoses as well as other labours and duties on board connected with the loading of cargo or maintaining mooring lines in a correct manner will be performed *by the ship's crew directed by a responsible officer* as required by the Mooring Master. Loading of crude oil tankers is through 2×20 in. I.D. hoses with 150 A.S.A. flange rating. The weight of each hose is approximately 4 tons.

All tankers loading crude oil at Bima Marine Terminal must be able to connect the 16 in. hoses to their manifolds. Masters are strongly reminded, that it is the ship's responsibility to provide reducers to make the connection, if the ship's manifold is not 16 in.

Preparations for mooring will be advised by the terminal through VHF communication prior to tanker's arrival or by the Mooring Master before the mooring operation commences.

Crude oil tankers are required to have ready:

1. On the port side: a derrick of a least 10 tons safe working load, rigged with a second topping lift ready to pick up the mooring and hose connecting gear from the Mooring Master's launch. This derrick will be subsequently used for raising, connecting, disconnecting and lowering loading hoses and eventually to transfer the mooring and hose connecting gear back to the launch before the tanker sails.

2. On the forecastle: at least 6 good ship's mooring lines shall be required. 2 of them will be used as messenger lines for bringing aboard both terminal mooring lines from the SBM. The 4 remaining ship's lines will be laid out 2 on either side of the foc'sle deck, eyes about 3.5 m. distant from the fairleads as advised by the Mooring Master. When the terminal mooring lines have been hove up and anti-chafe chains are about halfway through the fairleads, the eyes of the ship's lines will be shackled onto the end links of the chain so that in the final position of mooring, the tanker is tied to the SBM using the terminal mooring lines/chains made fast to the ship's bitts by means of the ship's own lines. This will be backed up by 2 wire strops each 30 ft. in length and 2 in. diameter.

These wires will be provided by the terminal to be used as preventer wires. These two wire strops will not be used as the permanent mooring system.

Their purpose is to hold the ship safely moored in the event one or more of the ship's lines parting until the crew can replace such lines.

EQUIPMENT: *Export Tanker Gear and Equipment:* A ship may be rejected, if upon inspection, it is not properly equipped, or if it is not suitably manned, or if its tanks are not suitable for the cargo, or if in the case of crude oil tankers the ballast is dirty.

A vessel is suitably manned if it has a full complement of qualified officers and crew all of whom are sober, competent and willing to carry out their duties and orders.

A ship must be equipped with a good working propulsion unit as passed by the appropriate survey society. Inoperative ships or partly inoperative ships will be rejected. Should a ship become inoperative or partly inoperative while secured to a single point mooring buoy, it will be removed at the ship's expense.

No repairs to main engines or other essential equipment or machinery while secured to an Export SBM may be carried out, unless with the permission of the Terminal Superintendent or his designated assistant.

Crude oil tankers must lift the export hoses from the water to connect with the ships manifold by means of their own derricks and using their own crew.

A vessel must have both bow anchors in good working condition. Both bow anchors and anchor cable must be of a size and standard to meet either "Lloyds" or "A.B.S." requirements, even though they may in fact, be classified by other societies.

All vessels must have ready on deck suitable stoppers for, manila, synthetic lines and wires used for mooring purposes.

All vessels must have suitable winches or capstans in good working order.

Such winches or capstans must have sufficient power to heave in the 18 in. terminal mooring lines as required by the Terminal Mooring Master. Tankers must have the capacity to heave up the 24 in. braid lines used to secure them to the Export SBM's. Power supply to all deck machinery must be maintained throughout the period the ship is secured to the Export SBM. Failure to comply with this requirement will result in cessation of loading and delay and expense so caused will be for the ship's account. To assist in vessel's turn around, ships should have all necessary gear ready on arrival. Crude oil tankers must have the cargo derrick on the port side raised with cargo gear rigged and ready before the ship is boarded by the Mooring Master.

Vessels which may consider the lifting capacity of their gear to be marginal should strengthen their gear accordingly. A common way to do so is to rig a second topping lift on the boom. Masters of crude oil tankers are reminded that the hose connecting operation will normally be carried out while the ship is deballasting.

The cargo derrick required to raise the hose from the water, must have sufficient length of strong lifting wire runner on the winch drum to enable the cargo hook to reach the water and still have adequate turns of wire left on the drum.

BALLAST: *Disposal of Ballast:* Owners and Masters are responsible to observe International Convention Laws and Indonesian Government Regulations concerning pollution of the sea, having particular regard for this area of the Java Sea.

No facilities are available for disposal of dirty ballast.

It is the responsibility of the ship's Master to see that no oil of any kind is pumped or spilled overboard from his ship.

The categories of pollution include oily water from bilges, crude residue from previous voyages or any other matter that may result in pollution of the sea. Any fines imposed shall be for ship's account.

As soon as practical after arrival, all tankers will be inspected by a Bima Marine Terminal Official for dirty ballast. During discharge of ballast, similar inspections will continue.

If evidence of oil appears at any of these inspections, the ship will be rejected and will not be accepted again until satisfactory evidence is produced that such ballast was disposed of in a proper manner. If, during inspection or during loading it is found that the ship's tanks are not tight or that oil is leaking from the ship, the ship may be rejected or refused further loading.

If the ship's tanks are found to be leaking it will not be accepted for loading unless satisfactory evidence of repair, duly certified by Lloyd's or A.B.S. Surveyors or other recognised Surveyors, is submitted. It is the responsibility of the ship's Master to see that no oil of any kind is pumped or spilled overboard from ship. Drip pans, sawdust, dispersent, etc., should be ready for use at all times especially when disconnecting hoses in order to avoid any spillage of oil overboard.

Notice of Readiness will automatically be nullified for any tanker rejected because of dirty ballast or sea pollution and such tanker will lose priority of position for loading.

A tanker must have sufficient ballast for safe handling having due regard to existing weather and sea conditions. Through a careful watch of the weather and sea conditions, frequent exchange of information between ship and terminal and by a knowledge of the behaviour of his own ship, a Master may come to the terminal with minimum safe ballast and thus lessen any possibility of infringement of sea pollution regulations.

In addition to the lights usually displayed, vessels in the moorings discharging ballast or loading cargo during darkness will brilliantly illuminate the sea around the ship, so that any pollution will be noticeable.

Tankers equipped with a separate system of ballast tanks will be allowed to discharge ballast, and load oil simultaneously, providing approval is first obtained from the Company Terminal Superintendent or his assistant.

Most responsible ship owners have adopted a system of tank cleaning using circulatory methods of transfer of tank washings on board and treating these washings with chemicals.

The result is that no oil is discharged into the sea and the separated oil is collected in a slop tank. With the written permission of lifting companies, the terminal will load on top of such slops. This system is highly recommended to avoid pollution of the Java Sea. Masters are required to certify in writing the quantity of slops remaining on board (if any). If they intend to load crude oil on top of the slops, it must be clearly stated. The Mooring Master will confirm the amount stated in writing by ullaging and calculating the slops to ensure the amount declared is correct.

Provided agreement is reached on the amount of slops the Mooring Master will confirm the amount of slops on the Dry Certificate.

Note: Separate "Slop Certificate" signed by Chief Officer witnessed by the Mooring Master is required to substantiate calculation.

Masters are warned that inspection of ballast is strict.

If, at any time an overflow of crude oil occurs, loading will be immediately suspended and will not be resumed until the oil is cleaned up and removed from the decks of the vessels and/or from the surface of the sea and any damage is repaired and no further danger exists. It is stressed that during loading operations, the Bima Cargo Controller will immediately slow down the loading rate on receipt of a request for same from the ship's deck officer in charge of loading.

All spillages of oil must be reported immediately to the Bima Terminal Superintendent or his assistant and subsequently a detailed report in writing submitted by the Master of the vessel concerned giving all relevant details.

MEDICAL: No facilities available.

FRESH WATER: Not available.

FUEL: Not available.

TIME: GMT plus 7 hours.

REPATRIATION: Not possible.

SHORE LEAVE: Not Possible.

GENERAL: *Wind and Tides:* Refer to Eastern Archipelago Pilot Vol. II. Water depth approximately 110 ft. below mean sea level.

Charts: Admiralty Chart No. 1653A. Java – Western portion including Straat Sunda.

Sailing Directions: Eastern Archipelago Pilot Vol. II.

AGENCY: *General Agent:* Pertamina Directorate of Shipping and Telecommunication, 6th Floor, Pertamina Head Office, Jl. Medan Merdeka Timura No. 1., P.O.Box 327, Jakarta – Indonesia. Cable address: Pertaminaship Jakarta. Tel: 343806-343781. Telex: 44450-45348.

Procedure for Appointing Agent: Owners shall telex or cable appointment of Pertaminaship as General Agent to attend the vessel at Bima Marine Terminal.

Telex/cable shall be sent 1 week prior to vessel's arrival.

Vessel's Owners shall issue to Pertaminaship Directorate of Shipping and Telecommunications (Pertaminaship) a proper letter of appointment giving the name(s) of Owner's vessel(s) which will operate in Indonesian waters and stating that Pertaminaship is appointed to act as General Agent for the named vessel(s) at Indonesian Ports of Call.

The following information shall also be given in the telex or cable to enable the General Agent to obtain Flag Dispensation for the vessels:

1. Name of vessel.
2. Call sign.
3. Flag.
4. Port of Registry.
5. Certificate of Registration Number.
6. Name of Master.
7. Number of Crew.
8. Last Port of Call.
9. ETA Bima Marine Terminal.
10. Indonesian Ports of Call.

Advance Payments: The General Agent will acknowledge receipt of cable appointment, and will request an advance deposit depending on the size of vessel, to cover the Port Charges not including Corporate Tax. In addition a sum of approximately US$5,000.00 to US$10,000.00 is to be paid as advance payment for freight tax.

Advance payment should be made payable to:

"Pertamina Agency"
Account No. 11.51.006.000.0005
Bank Negara Indonesia 1946, Cabang Gambir,
Jalan Kebon Sirih 77A,
Jakarta, Indonesia.

To facilitate handling preparation, Owners/Charterers are required to telex: "Pertamina Direktorat Perkapalan and Telekomunikasi" (Pertamina Directorate for Shipping and Telecommunications) advising Telegram Transfer (T.T.) Number, the name of vessel and the port(s) of call.

In those instances where payment exceeds the actual port charges the balance will be credited to the Owners/Charterers account or remitted by the Agent.

Neither the Agent nor Atlantic Richfield Indonesia Inc. will be responsible for demurrage or other charges resulting from failure to prearrange obligations in this manner.

OPERATOR: Atlantic Richfield Indonesia Inc.

Principal Offices:

Pertamina, Jalan Medan Merdeka Timur No. 1 A, Jakarta, Indonesia.

Atlantic Richfield Indonesia Inc., Panin Bank Building, Jalan Jenderal Sudirman, P.O.Box 63/JKT, Jakarta, Indonesia.

Arco International Oil and Gas Company, Division of Atlantic Richfield Company, Wells Fargo Building, 444 South Flower Street, Los Angeles, California 90017, U.S.A.

Inpex Java Ltd., 10th Floor, Toranomon 37 Mori Building, No. 5-1 Toranomon 3-Chome, Minato-Ku, Tokyo 105, Japan.

Tidewater N.W. Java, Inc., 1440 Canal Street, Suite 2100, New Orleans, Louisiana 70112, U.S.A.

Warrior Minyak Inc., 750 N. St. Paul, Suite 1530, Dallas, Texas 75201, U.S.A.

C. Itoh Energy Development Co. Ltd., C. Itoh Building, 5-1 Kita-Aoyama 2-Chome, Minato-Ku, Tokyo 107, Japan.

Deminex Java Oel GmbH, Setiabudi Building, 2nd Floor, Jalan H. Rasuna Said 62, Jakarta.

Deminex Java Oel GmbH, Attn: P4, P.O.Box 10 09 44, Dorotheenstr. 1, 4300 Essen 1, Federal Republic of Germany.

Nominations: Tanker nominations for lifting of Bima Crude Oil are co-ordinated through Arco International Oil and Gas Company, Los Angeles, California and Atlantic Richfield Indonesia Inc., Jakarta.

All crude oil sales, also tanker chartering are arranged by the following parties in each of their respective locations:

Pertamina,
Arco International Oil and Gas Company,
Iiapco, Inc., c/o Natomas Trading Co.,
Inpex Java, Ltd.,
Tidewater N.W. Java Inc.,
Warrior Minyak Inc.,
Deminex Java Oel GmbH,
C. Itoh Energy Development Co. Ltd.

Tanker scheduling is co-ordinated for all of the partners through Arco International Oil and Gas Company, Los Angeles, California, and arranged through Atlantic Richfield Indonesia Inc., Jakarta.

Iran

ADD BEFORE "AUTHORITY"

~~BANDAR ABBAS: (Also see page 726)~~

SHIPMASTER'S REPORT: January 1987.
Max. Size: Port can accommodate cargo/bulk vessels of 200 m. length with a maximum draft of 36 ft.
VHF: Channel 16 for Port, call "Port Control". Bandar Abbas Radio listens on Channel 25 and can be used for local calls.
Tugs: 5 tugs, 2,500 h.p. each for harbour duties and berthing.
Berthing: Bandar Abbas harbour has two ports.

Old Port: As mentioned in the "Guide", but now mainly used by dhows and barges. Only very rarely do general cargo ships discharge there. Ore jetty, bunker berth and a ferry berth still in use and will remain so. The remainder of the port will only be used by Iranian Navy, barges, dhows, etc.

New Port: No proper chart has yet been prepared for this area. It is located about 15 km. West of Old Port. Main channel from breakwater to anchorage (South of Old Port) is buoyed in the direction of 104°–284°.

Originally the port was being constructed for 40 berths but work has been suspended after completion of 24 berths. Oil handling installation is near No. 1 Berth.

No. 1 Berth is normally used for discharging vegetable oil, Berth No. 7 and 8 for containers, but in absence of appropriate vessels any ship can be berthed there. All 24 berths are in use now, and plans still exist for completion of up to 40 berths but it is not known when the work will restart.

No silos provided for bulk cargoes, hence it is discharged into lorries. Discharge rate can be up to 5,000 t.p.h. depending upon availability of transport.
Fresh Water: At anchorage available by barge and in port by road tankers. It is advisable that road tanker water is tested prior to receiving, as it is often a mixture of sea water and fresh water. Water is also expensive, hence vessels are advised to arrive with maximum water and if required to take water in Bandar Abbas it must be requested well in advance.
Fuel: Good quality fuel is available by barges and the request must be made to Shipping Co., Bandar Abbas if chartered to them.
Repairs: Private workshops can carry out minor repair work. But it must be checked properly.

Shipyard is now in operation 5 km. West of New Port but so far has only been used by Iranian ships. Except in emergency it is not available for other ships.
Telephones: Only available ashore for international calls. No telephones placed aboard vessels.

ADD BEFORE "AGENT"

~~CHAR-BAHAR: (Also see page 730)~~

SHIPMASTER'S REPORT: January 1987.

The following is an update of the "Shipmaster's Report – dated January 1984". Items not remarked upon are the same.
Port: Drafts at berths are different, no dredging has been done for years. Maximum depth is no more than 9.0 m. In any case a vessel must not arrive here with d.w.t. of more than 25,000 tonnes, otherwise vessel will be directed to other Iranian ports for lightening.
Tugs: 2×2,500 h.p.
Discharging: Most cargo discharged here is on direct delivery basis and there are severe problems regarding lorries. Rate of discharge varies between 300 tons to 1,000 tons depending upon how many ships are in port.
Fuel: Twice the price of current market price.
Regulations: Strict Islamic Regulations to be adhered to especially for wives onboard. They must not be seen outside the accommodation without proper Islamic cover.
Fresh Water: Should be tested before filling ship's tanks.
Telephones: Telephone exchange ashore provides international calls. There is no delay to Europe and U.S.A.

9PT.

NAMPO: (Also see page 918)

9PT. ROM CAPS No. 6.

SHIPMASTER'S REPORT: December 1986.

Vessel called at Nampo with a cargo of bulk wheat from India (about 22,400 tonnes).

1. The Nampo pilot ground has been established in an area enclosed by the positions:

(a)	Lat. 38° 41′ 24″ N.	Long. 124° 59′ 12″ E.
(b)	Lat. 38° 41′ 54″ N.	Long. 124° 58′ 06″ E.
(c)	Lat. 38° 43′ 06″ N.	Long. 125° 00′ 24″ E.
(d)	Lat. 38° 42′ 36″ N.	Long. 125° 01′ 36″ E.

2. The binoculars are put away under seal, also the use of transmitters and echo sounders beyond the lock gate is forbidden.
3. Vessel berthed at Berth No. 6, and the Pilot informed me that a 10 m. fresh water draft is safe.
4. Berth No. 6 is a mechanised berth serviced by 2 conveyor belts and claims of a discharge rate of 3,000 tonnes per day. There are, however, breakdowns and we managed about 1,000 tonnes per day with a high of 1,400 tonnes per day. A silo receives the wheat and has a capacity of 20,000 tonnes. Berth No. 6 is also the loading berth for bulk cement, serviced by one loader. Supposedly a load rate of 3,500 tonnes per day can be achieved. The storage facility for the bulk cement is a silo of 60,000 tonnes capacity.
5. Galley garbage is cleared every 3 days. The Harbour Authorities are strict and among other things are very particular about rat guards being in position and the satisfactory operation of sewerage treatment plants.
6. The Agents are co-operative and helpful, and going by earlier Masters' reports, I think there is vast improvement in telex and telephone facilities.
7. Agent's cable address: Kosa Nampo.

INSERT AFTER REPORT No. 5

Republic of Korea

ADD (SEE PLAN) IN PORT TITLE

~~ULSAN: (Also see page 931) (See Late Plans)~~

PORT OF ONSAN:

SHIPMASTER'S REPORT: March 1987.

This port is, to all intents and purposes, part of the Port of Ulsan – all services (tugs, Pilots, Agents etc.) – are from Ulsan.

The port itself consists of a dolphin jetty, with berths on both sides and is apparently owned and operated by "Ssangyang Oil Co." (See B.A. Chart 898 (Ports on East Coast of Korea) "On San Hang").

Berthing/unberthing is during daylight only.

Normal berthing is on either side of the jetty, with ship's head to the N.E. (vessel swung before berthing). It is recommended that good moorings, and as many as possible are used, as the jetty is open to Easterly swells which are common during summer months.

No services are available at the berth. Any fresh water or bunkers come, by barge, from Ulsan.

Cargo Connections: There appear to be only 2 per berth (on our call we used 1×8 in. Chicksan attached to a flexible length of hose. Aft of the "deep sea" berths there are coaster berths which appear to have larger Chicksans.

Maximum draft on the berth is reputed to be 10.8 m.

Documents are as listed in the "Guide". Foreign Currency List not always required.

INSERT BEFORE "AUTHORITY" IN SECTION A.

Mexico

~~CAYO ARCAS: (Also see page 1028)~~

9PT ROM.

SHIPMASTER'S REPORT: March 1987
Vessel: 117,000 d.w.t.
Documents:
5 Crew Lists.
3 Ship's Stores Lists (including Bond).
3 Personal Manifests.
Last Port Clearance.
Ship's Register.
Personnel: 1 Agent, 1 Immigration Officer, 3 Cargo Surveyors, 1 Loading Master and 10 Mooring/Pipe-line personnel join with Pilot. All personnel, except Immigration Officer, remain on board and require accommodation and meals.
Pilotage: Pilot boards from a supply boat about 2.5 miles S.W. of the platform.
Approaches: Normal direction of approach to berths is from the S.W. When proceeding to an SBM, the supply vessel lands all pipe-line equipment on board (port side), approximate weight 500 kgs.

Navigational lights marked on chart are extinguished. Flare marked on chart is also extinguished.

Racon on the oil platform S.S.E. of island showed well at 16 miles.

Approaching from the West, there were no problems when keeping well to the South of the 'Area to be avoided'.

Chart: B.A. 2626.

Radio: All ETA messages sent to ship's Agents.

Prior to arrival call 'Marine Control' on VHF Channel 16. Working Channels are 9 and 11, they were clearly heard at 20 miles. Vessel was instructed to anchor 5 miles East of platform, this was between the 'Area to be avoided' and the marked anchorage in approximately 42 m., mud bottom.

Information required by VHF: Nationality, draft, quantity of ballast and de-ballasting time.

After anchoring call 'Marine Control' with arrival time, anchoring time, quantity of bunkers and fresh water on arrival.

Tugs: 5 tugs of varying sizes, 2 supply vessels also used as tugs and several work boats. All equipped with VHF.

Berths: There are 4 loading berths.
- (a) Storage vessel 'World Champion' at anchor – Isthmus Crude.
- (b) Storage vessel 'Venture Europe' moored to SPM – Maya Crude.
- (c) No. 1 SBM – Maya Crude.
- (d) No. 2 SBM – Maya Crude.

Storage vessels ((a) and (b) above) have fenders in place on their starboard side and loading vessels berth port side to, using 1 tug on the starboard bow and 1 tug on the starboard quarter.

Moorings depend on the size of the vessel.
Maximum size vessel: 100,000 d.w.t.
Hoses: 2×12 in.
Loading rate: 5,800 t.p.h.

Loading vessels berth bow on to SBM ((c) and (d) above) using 1 tug on the starboard bow. Vessel picks up 1×80 mm. diameter messenger which is attached to a mooring chain for use with a Smit Bracket/AKD stopper.
Maximum size vessel: 216,000 d.w.t.
Hoses: 2×16 in. on port side.
Loading rate: 3,300 t.p.h. direct from the oil well.
Loading temperature: Up to 45°C.

Berthing is done in daylight hours only.

Tugs/supply vessels use their own lines when making fast for mooring.

In calm weather 1 tug makes fast aft to hold vessel off the SBM.

The 10 man mooring/pipe-line squad stand-by forward and by the manifold whilst the vessel is at the SBM.

Ship's personnel are required only to work the winches when mooring/unmooring, connecting and disconnecting the hoses.

DEPARTURE: *Documentation:* This takes up to 4 hours but the vessel must be ready to leave the mooring on completion of ullaging and sampling, drifting clear of the area whilst the cargo calculations are completed.

CARGO: *Caution:* Maya Crude has an extremely high Hydrogen Sulphide content.

BOLD

Medical: A doctor is available on the platform but facilities are limited.

Fresh Water: Not available.

Fuel: Not available.

Repairs: No facilities available.

Customs: Customs allowance seems to be a 'reasonable amount'. There was no query over 200 cigarettes and 1 bottle of spirits per person.

The bond is not sealed but the Immigration Officer checked two or three items against the Ship's Store List.

Gangway: Accommodation ladder is required on the port side at SBM.

Shore Leave: Not permitted.

Repatriation: Personnel are taken by helicopter from Cayo Arcas to Ciudad del Carmen, 90 miles to the South, and then by plane to Mexico City where there is an International Airport. There is no limit on the number of personnel travelling.

BOLD

GENERAL: *Time:* GMT minus 6 hours all year round.

Stores: None available but fresh prawns can be obtained from supply vessels/tugs.

Mail: Takes approximately 15 days to U.K./Europe but a courier service via the Agents is available taking only 5 days.

HELICOPTER

8pt BOLD CAPS

~~New Zealand~~

~~WELLINGTON: (Also see page 1115)~~

PILOTAGE:

HELICOPTER PILOT TRANSFERS
INFORMATION FOR MASTERS

As from 17th November, 1986, a trial Harbour Pilot/Helicopter transfer operation began to selected ships. The trial will run for 6 months and if successful the helicopter will become the primary mode of Pilot transfer.

It is anticipated that the helicopter operation will result in more efficient movement of shipping and enable Pilot boarding and disembarkation to take place in more adverse weather conditions than at present.

The majority of transfers will be made by winching although the helicopter may land on some ships.

Initially transfers will take place during daylight hours, however, night evaluation will be undertaken during the course of the trial.

The trial will be run by Helicopters (NZ) Limited, who were founded in Timaru in 1956 and have been involved in offshore support since 1968. The company have operated twin-engined helicopters since 1975. A Bell 212 helicopter will be used. It has 2 Pratt & Whitney PT 6-3 engines and full offshore support equipment. The Bell 212 has single engine hover capability during Pilot transfers.

1. *Pilot Transfer Area:* The transfer area will be 4.0 miles S.W. from Pencarrow Lighthouse. Masters are requested to stay at least 4.0 miles to seaward of Pencarrow Lighthouse until contact has been made with the Pilot helicopter.

2. *Communications:* Ships' Masters should give their ETA in the usual manner, i.e. 24 hours prior to arrival and 4 hours prior to arrival.

In addition ships' Masters should pass a further ETA to Wellington Harbour Radio (VHF Channel 16), 1 hour prior to arrival at the transfer area.

When airborne the helicopter will contact the ship on VHF Channel 16 and VHF Channel 13 will be selected for ship/helicopter communication whilst the transfer takes place.

The helicopter pilot will require information from the ship's Master on:
Ship's course.
Ship's speed.
Relative wind direction and wind speed.
Information on pitch and roll will be required if a landing is to take place.
Ship's position, if the vessel is not at the transfer area.

An alteration in the ship's course or speed may be required to facilitate the Pilot transfer.

3. *Requirements – Daylight Operations:*
- (a) Markings – no requirements.
- (b) Safety equipment – hoses, fire party, etc. The helicopter operators do not have any specific requirements. However, provision of firefighting equipment, as specified in the ICS guide, is at the discretion of the ship's Master.
- (c) A flag, as a wind indicator, is to be flown in a prominent position.
- (d) An Officer must be in attendance at the winching/landing area. The Officer must be in radio contact with the ship's bridge.

Requirements – Night Operations:
- (a) Safety equipment (as above).
- (b) An illuminated flag flown in a prominent position.
- (c) Illumination – ship to be illuminated overall. *Caution:* Lights *MUST NOT* be directed upwards towards the helicopter.

Additional Requirements for Tankers:
- (a) Cargo tanks and cargo pumproom to be battened down.
- (b) All tanks adjacent to the winching zone should be vented to atmosphere within 30 minutes of the transfer in order to avoid venting of petroleum gases whilst transfer is taking place.

Container Vessels: Landing onto containers will not be undertaken.

4. *Safety:* Handling of winch wire – the winch hook *MUST NOT* be attached to the ship's structure under any circumstances.

Approaching a landed helicopter – any approach to a landed helicopter *MUST* be made whilst in view of the helicopter pilot, i.e. *from the front of the helicopter.*

Shipmaster's Report: December 1986.

No problems were encountered when the Pilot boarded this vessel by this method in December 1986.

The helicopter did one circuit of the vessel before 'hovering' over the starboard side of the fore deck and winching the Pilot to the deck. The wind was about two points abaft the starboard beam and ship's speed about 10 knots. No alteration of course or speed was called for.

At present the helicoper operates during daylight only and as we sailed at night a pilot launch was used to disembark the Pilot.

After berthing, the Pilot informed me that we were the first tanker to use a helicopter transfer. (New Zealand coastal tankers have yet to agree to this service).

ADD BEFORE "AUTHORITY"

Nicaragua

~~CORINTO: (Also see page 1120)~~

SHIPMASTER'S REPORT: February 1987.

1. On anchoring, the Pilot, doctor and assistant board the vessel. After inspecting vaccination lists, and all cabins are sprayed, permission is given to weigh anchor.
2. Pilot very capable. 1 tug available.
3. Documents required when alongside:
   14 copies Manifest in Ballast.
   17 copies Manifest of Cargo (3 copies visaed).
   14 copies Bills of Lading.
   17 copies Crew List (3 copies visaed).
   17 copies Stores List (3 copies visaed).
   8 copies Money List.
   8 copies Personal Effects Lists.
4. During our stay at La Guaira the following were visaed: Crew Lists, Passenger Lists, Arms and Ammunition Lists, Narcotics List. The Nicaraguan Consul at Caracas charged U.S.$175.00 for this service.
5. Authorities were polite. Before sealing stores it was possible to take out immediate requirements (cigarettes, spirits, etc.).
6. All crew members to be present and passed by Immigration Officer one by one, in order to obtain shore passes.
7. Shore leave possible at following times: Master/Chief Officer/Chief Engineer from 0800 – 2400 hrs. Others 0800 – 2200 hrs.
8. All cabins and decks inspected by 1 Customs Officer and 2 soldiers.
9. It is possible to contact Agent 24 hours a day on VHF Channels 16 and 12, even on holidays.
10. Departure depends on Immigration Officer. All crew members to be passed by the Officer.
11. Pilot boards after clearance given.
12. It is possible to shift cargo, even containers, via the quay.
13. All stevedores equipment is up to date.
14. Consult "Guide to Port Entry" for further navigation details.

Philippines

~~BATANGAS: (Also see page 1225) (See Late Plans)~~

SHIPMASTER'S REPORT: January 1987.

Daylight berthing only at BBTI Pier as berthing dolphins (2) are only 60 m. apart. Also lighting is insufficient. Pilot advises that depth at pier is 45 ft.

RULES/REGULATIONS: 1st paragraph – *Delete and Substitute:* The Co-operation Council for the Arab States of the Gulf has issued a set of Rules and Regulations Valid for Saudi Arabian Seaports. These Rules and Regulations became effective on March 22nd, 1985.

General Regulations for Cargo Storage and Handling: No. 5 *Delete and Substitute:*

5. Bundled steel, profile iron, rebars, etc., shall be fitted with slings or lifting points suitable for multiple handling before commencement of handling this type of cargo, the ship's Master or Agent must present to the Port Management a certificate precisely stating the safe loading capacity of the relevant slings and lifting points. Failing to comply with this requirement will subject the vessel to financial penalties in addition to legal liabilities to third parties.

No. 13 *Delete and Substitute:*

13. The Master of any vessel carrying grain to a port, whether in bulk or in bags shall present an official certificate from the country of origin stating that the cargo was free from infestation and that it has been fumigated either before or after loading, in addition to a certificate stating that the vessel was free from infestation prior to commencement of loading. Without these certificates the vessel will not be permitted to discharge and will be liable to the imposition of a fine.

No. 14 *Delete and Substitute:*

14. The discharge of cargo for transhipment to another port, whether local or foreign is strictly forbidden without the prior permission of the competent authority.

The transfer of cargo from one vessel to another at anchorage or alongside berths within the port boundaries is strictly forbidden without the permission of the competent authority.

PORT REGULATIONS: 1. Notification to the Port Management Schedule under No. 1.2: *Add*

m. Not less than 48 hours before the vessel's arrival a detailed List of Arms and Ammunition carried on board purely for self-defence. Failure to comply with this requirement will result in heavy fines and seizure of the arms by the concerned authorities.

2. Vessels Failing to give Required Notifications: No. 2.2 (Line 4):

Delete: Possibilities

Substitute: Availability

4. Registration for Berthing:

Delete:

"Sambuks, schooners . . . after berthing."

Substitute:

"Sambuks, schooners, yachts or any craft not registered in the port without radio transmitting equipment, shall stay first in "Small Craft Anchorage" for the visit of Authorities before proceeding inside the port."

6. Papers and Documents Required:

Substitute:

(See also Special Requirements for Individual Ports).

Schedule Under No. 6.1.1

Delete: J. Vaccination Certificate

Substitute: J. Vaccination List

Delete: K. Derat Certificate

Substitute: K. Rat-Free Certificate

Schedule under No. 6.2.1

Delete: J. Arms and Ammunition List or "Nil" return.

11. Valid Cargo Gear Certificate

Schedule Under No. 11.1: *Add*

9. Jugoslavenski Registar Brodova
10. China Corporation Register of Shipping

No. 11.3 Exemptions

Delete:

(Red Sea, including ports in Somalia, Arabian Gulf and Gulf of Oman).

Advance Notice Requirements: Last paragraph – *Delete and Substitute:*

ADD BEFORE "AUTHORITY" AT
END OF SAUDI-GENERAL

NOTICE:

Saudi Arabia – Bahrain Causeway

The following Navigation Warning issued by the Saudi Seaports Authority – Riyadh is circulated to all concerned:

Date: 23.7.1407/25.11.1986

Subject: Navigation Warning "A" 172/25.11.1986

Saudi Arabia – Arabian Gulf – Saudi Arabia – Bahrain Causeway.

1. A causeway linking Saudi Arabia and Bahrain has been constructed and the following positions represent the centreline and general direction of the causeway:

A.	Lat. 26° 13.17′ N.,	Long. 50° 13.27′ E.
B.	Lat. 26° 13.20′ N.,	Long. 50° 13.87′ E.
C.	Lat. 26° 13.15′ N.,	Long. 50° 14.38′ E.
D.	Lat. 26° 12.83′ N.,	Long. 50° 15.63′ E.
E.	Lat. 26° 12.70′ N.,	Long. 50° 16.00′ E.
F.	Lat. 26° 11.33′ N.,	Long. 50° 18.82′ E.
G.	Lat. 26° 11.02′ N.,	Long. 50° 19.55′ E.
H.	Lat. 26° 10.92′ N.,	Long. 50° 20.17′ E.
I.	Lat. 26° 10.83′ N.,	Long. 50° 22.20′ E.
J.	Lat. 26° 10.17′ N.,	Long. 50° 24.07′ E.
K.	Lat. 26° 10.05′ N.,	Long. 50° 25.25′ E.
L.	Lat. 26° 10.28′ N.,	Long. 50° 27.00′ E.

2. Four Navigation Spans have been provided in the causeway, 1 main (Bridge No. 3) and 3 secondary (Bridge Nos. 1, 4 and 5).

(a) Main Navigation Span Bridge No. 3.
Centre of Span in position: Lat. 26° 12.10′ N., Long. 50° 17.23′ E.
Clearance Under Span: 28.5 m. at Admiralty Chart Datum.
Navigation Width of Span: 122 m.
Depth of Water Under Span: 7 m. at Admiralty Chart Datum.

(b) Secondary Navigation Span Bridge No. 1.
Centre of Span in position: Lat. 26° 13.18′ N., Long. 50° 13.58′ E.
Clearance Under Span: 15.5 m. at Admiralty Chart Datum.
Navigation Width of Span: 45 m.
Depth of Water Under Span: 5.5 m. at Admiralty Chart Datum.

(c) Secondary Navigation Span Bridge No. 4.
Centre of Span in position: Lat. 26° 10.87′ N., Long. 50° 21.10′ E.
Clearance Under Span: 15.5 m. at Admiralty Chart Datum.
Navigation Width of Span: 45 m.
Depth of Water Under Span: 5.5 m. at Admiralty Chart Datum.

(d) Secondary Navigation Span Bridge No. 5.
Centre of Span in position: Lat. 26° 10.12′ N., Long. 50° 25.75′ E.
Clearance Under Span: 15.5 m. at Admiralty Chart Datum.
Navigation Width of Span: 45 m.
Depth of Water Under Span: 4.5 m. at Admiralty Chart Datum.

3. (a) The North and South piles on the Eastern side of each navigation span are marked with red lights, while green lights mark the Western sides. These lights show over an arc of 40°, that is 20° either side of a line at right angles to the bridge span.

(b) Main Navigation Span Lights:
Characteristic: Occult 5 secs.
Height: 5 m.
Nominal Range: 5 miles.

(c) Secondary Navigation Span Lights:
Characteristic: Fixed.
Height: 7 m.
Nominal Range: 5 miles.

(d) The piles at either side of the navigable spans are also illuminated from above with floodlights.

4. Light beacons, Lateral System "A" with a height of 5 m., nominal range 5 miles and fitted with radar reflectors are to be inserted as follows:

Lat. 26° 12.87′ N.,	Long. 50° 17.50′ E.	Fl. Green 4 secs.
Lat. 26° 12.85′ N.,	Long. 50° 17.58′ E.	Fl. Red 4 secs.
Lat. 26° 12.48′ N.,	Long. 50° 17.35′ E.	Fl. Green 8 secs.
Lat. 26° 12.47′ N.,	Long. 50° 17.43′ E.	Fl. Red 8 secs.
Lat. 26° 11.73′ N.,	Long. 50° 17.03′ E.	Fl. Green 8 secs.
Lat. 26° 11.70′ N.,	Long. 50° 17.12′ E.	Fl. Red 8 secs.
Lat. 26° 11.35′ N.,	Long. 50° 16.88′ E.	Fl. Green 4 secs.
Lat. 26° 11.32′ N.,	Long. 50° 16.97′ E.	Fl. Red 4 secs.

5. All positions are referenced to the International Spheriod Datum Ain Al Abd (1970).

N.B.: Any other flange size or rating will require special fabricated spool pieces to meet above flange specification. Spool pieces must be furnished and installed by the vessel. Terminal personnel will connect the coupler to proper ship's flanges. *Ship's* personnel will bolt on any required spool pieces. Ship's manifold must meet requirements of loading arm envelope and must provide suitable base and clearance for loading arms supports.

Discharging/Loading Rates:

Discharging: Maximum discharging rate accepted by Terminal:
Crude Oil – Jetty No. 1: 16,000 t.p.h.
Crude Oil – Jetty No. 2: 7,000 t.p.h.

Loading: Maximum loading rate provided, actually, by the Terminal:

Fuel Oil	3,000 t.p.h.
Gas Oil	1,500 t.p.h.
Kerosene	1,400 t.p.h.
Gasoline	1,400 t.p.h.
Naphtha	1,400 t.p.h.
LPG – Butane	190 t.p.h.
LPG – Propylene	90 t.p.h.

Bunkering: Bunkering fuel facilities are available on Jetty Nos. 1, 2, 3, 4 and 5.

The minimum quantity to be supplied is of 1,000 tons.

Deballasting: All ballast will be unloaded to the shore facilities. At the moment, the cost of ballast reception ashore is free.

The Master will report to the Terminal the quantity of ballast on arrival and when due to bad weather, the ballast quantity is over the normal.

Only clean ballast contained in ship's tankers, completely segregated from main cargo tanks will be allowed to be discharged into the harbour after approval by the Port Authority.

Note: Overboard discharge valves and sea suction valves continue to be a source of oil pollution. *Make sure these are tested and proven to be in good working order, closed and sealed.*

Gangway: Owner warrants that the vessel is equipped with a gangway in a safe and good operating condition.

Jetty Nos. 1 and 2 are provided with a shore gangway. The cost to the vessel's account is minimal.

Crude Oil Washing Tanks: When it is required to carry out crude oil washing of tanks during cargo discharge, Master must seek approval of the Port Authority and the Terminal at least 24 hours in advance.

During crude oil washing, it is recommended that 1 tug remains on stand-by during the operation.

Jetty Emergency Shutdown Systems and Surge Pressures: All jetties (fuel oil/clean products/LPG) are equipped with Emergency Shutdown (ESD) System to stop loading operations.

The system is activated by pushing the electrical "stop" button at any one of several stations on the jetty and in the Terminal Control Room.

On activating the loading ESD system, all jetties stop loading; the cargo pumps are all shutdown; the loading arm valves close on all jetties.

The valves and other equipment, have been designed and set to close in a minimum time for safety and still avoid damage by surge pressures.

Recognising the tremendous damage surge pressures can cause, careful check of the ship's emergency shutdown system will be made. If suitable record is not available on valve closure times, the Master will be asked to operate the system to enable timing of the valves.

The Terminal will not load at a rate in excess of that shown as being safe. Excess loading times caused by restricted loading rates due to the ship's ESD system will cause additional laytime to be allowed.

All cargo loading lines for fuel oil/clean products have a pressure switch installed that activates the ESD system with the same effect as mentioned above when the pressure on line exceeds 15 kg./sq.m.

Fenders: On the jetties the fenders and fendering structures are designed to absorb normal working stress levels, and each has a generous energy-absorbing capacity.

The energy imparted by vessels approaching the jetties is:

Berth No.	*Recommended Max. cm./sec.*	*Recommended Max. Angle to Jetty Face*
1	6	0° up to 7.5°
2	8	
3	9	
4 – 5	10	
6	10	

Intermediate "Yokohama" type fenders have been placed on Berth Nos. 1, 2, 3, 4 and 6 to improve the absorption of the kinetic energy of vessel.

Mooring Arrangements: See "Late Plans".

Port Health: The national and international regulations concerning Free Pratique are applicable at Bilbao.

Free Pratique is granted when at berth; if anchored, the Agent will be requested to arrange the visit under Master's requirements.

Radio advice to the Health Authorities is not required unless there is contagious sickness on board or if coming from an epidemic zone.

Garbage or trash will not be dumped into the port waters. The area surrounding the vessel shall be kept clean.

Customs: The Customs Authority will board either when vessel is berthing or at anchor.

The usual documents required are:

6 copies Crew List.

4 copies Passenger List.

1 copy Negative Passenger List; if there are no passengers aboard.

3 copies Cargo Manifest for Petronor.

2 copies Cargo In-Transit, if any.

3 copies Stores List, including bunkers, vessel's property, tobacco, spirits, medicine chest, etc.

3 copies Crew's and/or Passengers' Personal Effects.

The crew members are not allowed to keep more than 200 cigarettes (or the equivalent in tobacco) and a bottle (1 litre) of spirits out of bond. The excess must be included in the vessel's Store Lists, and are to be sealed. The total maximum quantity that any ship can carry in accordance with the Spanish Law is 6 kg. of tobacco or 6,000 cigarettes for each person aboard (for example, for 30 crew members the maximum quantity allowed is 180 kg. of tobacco or 180,000 cigarettes). Any quantity over these amounts should be manifested as "tobacco in-transit" and this Manifest visaed by the Spanish Consulate in the last port.

If a Spanish Consul was not available in the last port of call, Master is required to send prior to arrival the following cable:

To: Direccion General de Aduanas – Madrid.

Vessel..Coming from..................

Bound for Bilbao Petronor with Tobacco Manifest not visaed last port due to Spanish Consul not available in the last port.

Signed: Master.

The text of this cable is to be registered in the log book and 1 copy of the same is to be given to the Customs Agent when boarding.

See ROBERT

PALAMOS: (Also see page 1405)

BERTHING: (Also see "Developments" on page 1405)

A new berth alongside the breakwater, length 200 m., depth 14 m. is in operation.

HOLIDAYS: 11th September.

AUTHORITY: *Add:* Comissio de Ports de Catalunya, c/Dr. Roux No. 63, 08017 Barcelona. *Contact:* Zona Portuaria I. Passeig General Mendoza, No. 7 T, 08017 Girona. *Tel:* (972) 20.14.27.

INSERT AS NEW ENTRY.

SANT CARLES DE LA RAPITA: 40.37 N. 00.36 E.

(See ~~Late~~ Plan~~s~~)

DOCUMENTS:

3 Crew Lists.

1 Passenger List or negative.

Manifest of Goods destined for Sant Carles de la Rapita and in-transit.

Stores List, in duplicate, including tobacco, spirits, radios, etc., belonging to vessel.

Detailed list, in duplicate, of all personal effects of crew and passengers (tobacco, spirits, cameras, radios, etc.).

Tobacco – any excess over 6 kg. per person must be stated on a separate manifest duly visaed by Spanish Consul.

If on inspection differences are found (more or less), articles are removed and a heavy fine imposed.

PILOTAGE: Pilotage is compulsory and service permanent. Pilot is informed by Agent of vessels ETA, given 24 hours in advance. When vessels approach the breakwater, Pilot will board. The pilot boat is white with a black "P" painted on the side. Contact pilot station on VHF Channel 14. Pilot Tel: (977) 74.05.01.

RESTRICTIONS: None but for draft. Vessels carrying dangerous cargo should get permission for berthing prior to arrival.

MAX. SIZE: According to draft.

HEALTH: Pratique is obtained immediately after berthing. In case of suspected disease or fever on board the Master must radio Agent in order to inform Health Officer in time.

RADIO: Radio Costera of Barcelona and Tarragona.

VHF: See "Pilotage".

TUGS: Available.

BERTHING: Depth of water in centre of harbour 26 ft. Commercial Wharf length: 1,607 ft., depth 17 ft. – 22 ft.

CRANES: 2 cranes of 12 tons capacity.

STEVEDORES: 24 hours notice required in order to arrange gangs. Unloading rates depend on type of cargo.

MEDICAL: Any kind of medical service can be arranged if information received in time.

FRESH WATER: Plentiful supply of water by means of hoses from the pier to vessel.

FUEL: Can be supplied if required, but 24 hours notice required.

GANGWAY/DECK WATCHMEN: Not compulsory but advisable at night.

OPENING/CLOSING HATCHES: Normally opened/closed by the crew, otherwise according to "Charter Party". Lashing must be carried out by crew.

CERTIFICATES: Usual documents on board. Safety Radio, Safety Equipment, Derat and Registered Tonnage Certificates are the only ones required by Authorities.

CUSTOMS ALLOWANCES: Crew: 6 kg. tobacco per person. Passengers: 2 kg. per person. Any excess on this amount must be declared on a separate manifest as in-transit. Wine and/or Spirits: Only 1 bottle per person. Any excess must be declared on a separate manifest, as "cargo in-transit" and stowed apart from the tobacco and spirits carried under the Provisions List. This manifest must be visaed by the Spanish Consul at the last port of call. Any infringement of this regulation will subject the vessel to the immediate imposition of a heavy fine and confiscation of excess tobacco.

CONSULS: See "Tarragona".

IDENTIFICATION CARDS: Not required.

SURVEYORS: Comisariado Espanol Maritimo "Comisar". Tel: (972) 210610, 215666.

REPAIRS: Slipway with capacity of 200 tons.

REPATRIATION: Good facilities available.

AIRPORT: Reus Airport situated 90 km. distance and 45 minutes by car from Sant Carles. Regular flight services with Madrid.

TIME: GMT plus 1 hour in Winter. GMT plus 2 hours in Summer (beginning April-late September).

HOLIDAYS: September 11th.

POLICE/AMBULANCE/FIRE: Police: 74.07.17; Ambulance: 74.07.17; Fire: 70.00.80.

AUTHORITY: Ayudante Militar de Marina. Ayudantia Militar de Marina. Sant Carles de la Rapita (Tarragona-Espana). *Tel:* 74.00.59. *Cables:* Ayudante de Marina, Sant Carles de la Rapita.

SEE ROBERT.

Sweden

HARGSHAMN: (Also see page 1427)

THE FOLLOWING INFORMATION WAS RECEIVED IN MARCH 1987.

LOCATION: The port is situated in the archipelago of Oregrund, about 130 km. North of Stockholm and about 110 km. South of Gefle. It is a natural and well sheltered harbour, suitable for vessels up to about 30,000 d.w.t.
DOCUMENTS: The Customs require the following documents:
Tonnage Certificate.
Certificate of Nationality.
Swedish Light Dues Receipt for current year.
Crew List, 2 copies.
Crew's Effects Declaration (spirits and tobacco only), 2 copies.
Ship's Stores Declaration (spirits and tobacco only), 2 copies.
PILOTAGE: Pilot is compulsory for tankers over 1,200 g.r.t. and dry cargo vessels over 1,600 g.r.t.

Pilot is available from 0300 hrs. – 2400 hrs. and is embarked off Svartklubben Lighthouse (Lat. 60° 09′ N., Long. 18° 52′ E.). Order for Pilot has to be given 5 hours before needed and can be given via the Agent or direct to the Svartklubben Pilot Station, VHF Channel 16, Tel: Hallstavik 0175-10006, Cables: "Pilotstation Hallstavik".

Distance from sea off Svartklubben to Hargshamn is about 17 nautical miles. For vessels arriving from North, Pilot will board on request at Oregrund or North thereof.
RESTRICTIONS: Vessels with draft over 7.15 m. are navigated in daylight only.
MAX. SIZE:
Max. allowed draft 10.4 m. at MLW (density of water 1006).
Max. allowed length of vessel about 185 m.
Max. allowed breadth of vessel about 28 m.
Max. distance water level to hatch coamings 10 m. (loading ore).
Max. allowed draft at new quay for general cargo 7.3 m.
RADIO: ETA is to be given 48 hours and 24 hours in advance to the Agent. Tel: Osthammar 0173-20080 or cable: "Oreship Hargshamn".
BERTHING: *Ore Quay:* Managed by shippers SSAB.
Length 90 m.
Minimum depth alongside 11 m.
Berth equipped with a loading conveyor, capacity 800 t.p.h.
New Quay: Managed by Hargshamns Terminal AB.
Length 40 m.
Minimum depth alongside 8 m.
Equipped with mobile cranes 50 tons and 160 tons.
STEVEDORES: Ordinary Working Hours: Monday-Friday 0600 – 2200 and Saturdays 0600 – 1200.

Work can be arranged on overtime except on following holidays: New Year's Day, Epiphany, Easter Holidays, Labour Day, Ascension Day, Whitsun Holidays, Midsummer Holidays, All Saint's Day, Christmas Holidays and New Year's Eve.

Overtime charges as per separate tariff.
No trimming charges.
New Quay: Ordinary Working Hours: Monday-Friday 0700 – 1600.
Stevedores: Hargshamns Terminal AB, S-740 73 Hargshamn. Tel: Osthammar 0173-20020. Telex: 76042.
GENERAL: *Ice:* The port can be kept open all Winter by an ice-breaking tug. Normally there is ice from last week of December until the last week of March/first week of April. In port and entrance there is fast ice up to 40 cm. – 50 cm. thick.

Navigation is maintained in broken ice-channel.

Off the pilot station or in Aland Sea there is very seldom packed ice or other difficulties during a normal Winter.
Charts: Swedish No. 536 (1:50000).
B.A. No. 2335 (1:100000).
AUTHORITY: (Iron Ore): SSAB Dannemora Gruvor, S-740 63 Osterbybruk. *Tel:* Dannemora 0295-20720; Osthammar 0173-20192 (port); Osthammar 0173-20123 (Foreman – private).

AGENT: Bjorsbo Shipping AB, S-740 73 Hargshamn. Tel: Osthammar 0173-20080. Telex: 76042. Fax: Osthammar 0173-20132. Cables: "Oreship Hargshamn".

United Kingdom

NEW U.K. ENTRY

RAMSGATE: 51.20 N. 01.24 E.

(SEE PLAN)

(A) PORT RAMSGATE

PILOTAGE: Compulsory for most merchant vessels. Pilotage is under the jurisdiction of Folkestone Pilots. Tel: (0303) 567667. VHF Working Channels 16 and 9.

Minimum notice: Inward 12 hours. Outward: 2 hours.
ANCHORAGE: Anchorage at Margate Roads and The Downs off Deal (Chart No. 1828 Dover to North Foreland).
APPROACHES: *Approach Channel:* The approach channel has a depth of −6.5 c.d. with a base width of 85 m. Tidal range is +0.3 c.d. to +5.2 c.d. (predicted). The channel extends East from Long. 1° 25′ 30″ E. for a distance of 2,000 m. from Port Ramsgate breakwater heads which are marked as follows:
East Brake Buoy: Lat: 51° 19′ 14″ N.; Long: 01° 28′ 22″ E. East Cardinal Qk.Fl. 3 every 10 secs. White.
Starboard Channel Buoy: Lat: 51° 19′ 30″ N.; Long: 01° 27′ 19″ E. 1 Fl. yellow every 5 secs. Y. pillar buoy. Topmark yellow X.
Port Channel Buoy: Lat: 51° 19′ 27″ N.; Long: 01° 27′ 19″ E. Gp. Fl. 4 every 10 secs. R. R. can buoy. R. can topmark.
Dike Buoy: Lat: 51° 19′ 30″ N.; Long: 01° 26′ 00″ E. South Cardinal. Qk. Fl. 6 Fl. plus 1 long Fl. White.
Quern Light Buoy: Lat: 51 19′ 26″ N.; Long: 01° 26′ 00″ E. North Cardinal. Qk. Fl. White.
East Breakwater Light Tower: Lat: 51° 19′ 31″ N.; Long: 1° 25′ 34″ E. Day mark red and white. Qk. Fl. Green (established June 1986).
West Breakwater Light Tower: Lat: 51° 19′ 25″ N.; Long: 1° 25′ 30″ E. Day mark green and white. Qk. Fl. Green (established June 1986).
Front Lead Beacon: Lat: 51° 19′ 29″ N.; Long: 01′ 24′ 59″ E. Occulting 8 secs. on, 2 secs. off. Racon beacon fitted. Coloured sectors light: green 10°, white 2°, red 10°.
Rear Lead Beacon: Lat: 51° 19′ 29″ N.; Long: 01° 24′ 44″ E. Fl. every 5 secs. White.
Harbour Signals: Harbour signals to conform with proposed International Harbour Signals will be established at the East Pier Signal Station when the Harbour Authorities requires that the deep water approach channel be kept clear.
Port Ramsgate Turning Basin: Maximum dimensions 500 m. North–South; 550 m. East–West, giving a free swing diameter of 300 m. (ref. to Chart No. 1827 Ramsgate Harbour and Approaches).
VHF: *Vessel Traffic Services:* All arriving vessels are to notify the VTS Office at the East Pier Control Tower on VHF Channels 14 or 16 of intended arrival and requirements. Tel: (0843) 592277.

Vessels should report when approximately 1 hour from point "R" (Romeo) which is defined as a radius of 2.5 miles from the centre of a line joining the Channel Entrance buoys.
TUGS: 1×18 tons bollard pull.
BERTHING: *No. 1 Berth/Linkspan:* Depth: 6.5 m. (c.d.); beam: 17 m. – 19 m. (vessels). 4 point mooring system: 2 concrete dolphins with fenders; 1 pile cluster mooring point aft, 1 mooring buoy forward.
Fender positions from the ship end of the linkspan.
No. 1: 38 m.
No. 2: 80 m.
Linkspan Length: 50 m.
Widths: ship end: 14 m.
A.O. bridge: 4 m.
clear road: 3.5 m.
Ship end free board: variable.
Road level at hinge end: +8.07 m. (c.d.).
Safe Working Load: 50 tons.
Nos. 2 and 3 Berths/Linkspans: Depth: – 6.5 m. (c.d.). Beam: 25 m. (vessels).

9 point mooring system along the centre line of the berthing structure. 4 fenders on each side.
Fender positions from the linkspan front face:
No. 1: 38 m.
No. 2: 63 m.
No. 3: 80 m.
No. 4: 100 m.
(outer bollard 110 m.).
Pontoon type linkspans:

Length:	31.0 m.
Breadth:	23.0 m.
Depth moulded:	4.4 m.
Depth working:	1.0 m.
Ship end free board:	variable

Ramp:

Length:	40.0 m.
Width:	9.1 – 10.7 m.
Free width:	7.0 – 9.7 m.
Axle load:	50 tonnes

CARGO HANDLING FACILITIES: 2 in No. 4 terminal tractors, 70 ton drawbar pull. 6 in No. 2 terminal tractors, 50 ton drawbar pull. Fork lift, 12 ton lift. Fork lift, 1.5 ton lift. Baggage tractors.
Craneage available to maximum lift 100 tonnes at 24 hours' notice.
Port area of 21.25 acres or 86,000 sq.m.
Freight transit shed: internal area 1.050 sq.m.
Open storage areas.
MEDICAL: Hospital, doctor and dentist available.
FRESH WATER: Available.
FUEL: Available.
FIRE PRECAUTIONS: Fire hydrants available at each berth.
REPAIRS: Possible.
Chatham Shiprepairers Ltd., 6 Military Road, Ramsgate. Tel: 585153.
John Sanders (Ramsgate) Ltd., 29 Military Road, Ramsgate. Tel: 597694/586792.
REPATRIATION: Possible.

AIRPORTS: 3 miles West of Ramsgate is Manston Airport. Manston has one of the longest runways in the U.K. and is able to handle the largest trans-Atlantic jumbo freighters. Seabourne Aviation have been granted a 99-year lease from the Ministry of Defence to develop the airport as a major freight handling centre.

Intermodal transport opportunities enabling cargo to be flown in from around the world and transhipped by Ro/Ro to all parts of Europe is a special attraction for Port Ramsgate users.

In addition to Seabourne Aviation, the commercial operators of Manston who run the Seabourne Express intra-European delivery service, there is a major trans-Atlantic air cargo consolidator, Air Express International.

AEI now uses Manston for its CL44 freighter flights from New York because of its superior location in relation to the Continent and its 24 hour, congestion-free terminal.

Seabourne and AEI are discussing the possibility of feeder services linking with AEI's trans-Atlantic flights. With the help of precise timetabling, it is reckoned that cargo could be transhipped at Manston and be on a ferry to the Continent in less than 3 hours.

A full range of passenger reception facilities are available at Manston, and have been used by British Air Ferries for weekly flights to and from Jersey.

DEVELOPMENTS: Port Ramsgate's Phase III development was completed in June 1986. The contract involves the provision of a further 20,000 sq.m. of hard-standing South of the existing terminal extension, the connecting of the two separate sections of breakwater with each other and the shore, and the construction of an extra section of breakwater from the end of the Eastern arm of the Royal Harbour in a Southeasterly direction, thus narrowing the port entrance.

Development, however, will continue despite the fact that with the completion of Phase III, Port Ramsgate will be fully protected from all states of the weather and capable of handling two additional operators.

Long term plans, scheduled for completion in 1988, will result in the provision of a further 60,000 sq.m. of hard-standing, up to 3 more Ro/Ro, 2 Lo/Lo berths and a widened and deepened approach channel and turning area within the breakwaters. A new terminal for passengers and accompanied car traffic is also planned, in addition to further back-up facilities for freight operators.

AUTHORITY: Thanet District Council, P.O.Box 9, Margate, Kent. *Tel:* (0843) 225511.

East Pier Control Tower: *Tel:* (0843) 592277.

Operator: Port Ramsgate Ltd., Ramsgate, Kent CT11 8RP. *Tel:* (0843) 587661. *Telex:* 966340. *FAX:* 589570. *Contact:* M. Kingshott, Managing Director. H. V. Archdeacon, General Manager. R. Gipson, Operations Manager.

(B) ROYAL HARBOUR

ANCHORAGE: Vessels waiting to enter Ramsgate may anchor in Margate Roads or in the vicinity of the Broadstairs Knoll buoy, paying due regard to the presence of submarine cables.

APPROACHES: *Approach Channel:* The main channel, 85 m. wide at the base, extends 2,133 m. to seaward from the harbour entrance. Additionally a turning area has been dredged West of the harbour entrance and in the vicinity of the ferry terminal. The centre of the channel is indicated by leading lights and marks 090°–270° True.

Harbour Signals: Permission to enter the channel and the Royal Harbour may be requested by radio from the Harbour Control. Harbour signals, to conform with the International Harbour Signals, are displayed by the Harbour Control and also at the Lock Head to the marina.

RESTRICTIONS: *Times of Entry:* The main channel has been dredged to a depth of 6.5 m. below datum, allowing unrestricted entry to the Western Terminal. The entrance to the Royal Harbour is maintained at 3.0 m. below datum and vessels are advised that this normally allows entry for at least 2 hours on either side of HW.

MAX. SIZE: Max. LOA 105 m. Max. draft 4.8 m. (2 hours either side of HW).

VHF: *Vessel Traffic Service:* Vessels wishing to enter Ramsgate Harbour must report to the Harbour Control on Channel 14 when arriving at a point 2.5 miles from the channel entrance buoys. This point is referred to as "Point Romeo" and permission must be obtained to enter the channel before proceeding further.

BERTHING: Commercial Quay: Length 109 m. Width 18.0 m. Berthing possible on East and West sides.

Ro/Ro Berth: Vessels berth against dolphins which are 36 m. apart. Linkspan available.

CRANES: 1×18 ton crane available. Private cranes up to 130 tons capacity may be hired. Fork lift trucks available.

STEVEDORES: Available locally.

MEDICAL: Hospital, doctors and dentists available locally.

FRESH WATER: Available.

FUEL: Small quantities available by barge. Larger quantities available by road tanker.

CONSULS: See "Dover".

SURVEYORS: Available locally.

REPAIRS: Minor repairs possible. Slipway for up to 500 tons capacity.

HATCHES: Opened and closed by crew.

AIRPORT: See "Port Ramsgate".

EMERGENCY CO-ORDINATION CENTRE: The RNLI maintains a motor lifeboat stationed in the harbour, and Air Sea Rescue facilities are provided by RAF helicopters from nearby Manston Airport.

POLICE/AMBULANCE/FIRE: Dial 999.

SERVICES: The following are available: radio repairs, ship chandler, diving services, charts, compass adjusting, Derat and fumigation.

AUTHORITY: Thanet District Council, P.O.Box 9, Margate, Kent CT9 1XZ. *Tel:* (0843) 25511. *Telex:* 965861.

Contact: Capt. T. R. Phinn, Harbour Master. Commander C. H. Marsh, General Manager, Tel: (0843) 592277.

~~**HONOLULU:** (Also see page 1744) **(See Late Plans)**~~

~~THE FOLLOWING INFORMATION WAS RECEIVED IN FEBRUARY 1987.~~ INSERT AFTER

(B) HAWAIIAN INDEPENDENT REFINERY INC. (HIRI) – BARBERS POINT

AGENT AND SEE ROBERT.

LOCATION: HIRI's offshore tanker Marine Terminal is located at Lat. 21° 16.4′ N., Long. 158° 05.5′ W., approximately 2 miles bearing 146° True from Barber's Point Light on the Island of Oahu in the Hawaiian Islands.

The Marine Terminal consists of a CALM-type Single Point Mooring buoy, 38 ft. in diameter with 14 ft. moulded depth. The buoy has an amber flashing navigation light with 5 miles visibility. 3 floating hose strings, 840 ft. in length, are connected to the buoy. The hose strings have quick-flashing amber warning lights attached.

DOCUMENTS: *Arrival and Departure Requirements:* All arrival and departure requirements are handled through the ship's Agent. All matters related to arrival or departure should be referred to that Agent.

VESSEL ACCEPTANCE: Hawaiian Independent Refinery's Marine Terminal CALM-type Single Point Mooring (SPM) is designed for tankers up to 150,000 d.w.t. In order to maintain safe control and to avoid any serious mishap, all vessels must be nominated to and accepted by HIRI prior to arrival. HIRI reserves the right to refuse any nominations due to vessel's specifications or previous experience of similar vessels at the mooring.

In general, tankers having the following maximum particulars are acceptable; however, in no case can acceptance be considered automatic on nomination as operating conditions can always preclude receiving the vessel:

L.O.A.	945 ft.
Breadth	150 ft.
Summer DWT	150,000 tons
Bow to Centre Manifold	470 ft.

Depth of water at the berth is in excess of 90 ft., so no draft limitation is necessary.

A tanker may be rejected if, upon inspection by Mooring Master and/or Petroleum Inspector, it is not properly equipped; is not suitably manned; has dirty ballast which has not been previously accepted; has tank unsuitable for cargo; or is not considered seaworthy in all respects.

A tanker must be equipped with a good working propulsion unit as passed by the appropriate survey society. Inoperative tankers or partially operative tankers are not acceptable. All vessels are subject to U.S. Coast Guard inspection at any time and must receive U.S. Coast Guard approval.

No repairs are to be made while mooring or unmooring or at the berth, without the express written permission of the Mooring Master.

A ship's Deck Officer *must* be present and *must* direct the ship's crew in all hose handling operations.

PILOTAGE: Tankers to be moored will be boarded by the Mooring Master as well as a third party Petroleum Inspector in the immediate vicinity of the Marine Terminal, or at anchorage if the ship has been delayed and is at anchor. Ships are requested to have a pilot ladder safely and securely rigged, ready for immediate use, and long enough to reach approximately 1.0 m. above the water. A light line should be ready to take aboard the Mooring Master's and Inspector's equipment. There should be adequate lighting at night. The tanker should provide a lee for the personnel when boarding and leaving.

The Mooring Master will advise the ship's Master on approaches to the berth, mooring, unmooring, and all operations within the mooring area. The Mooring Master will also inspect the ship's gear for its adequacy and initiate the safety inspection procedure. Tanker's crew are to perform all operations concerning raising, connecting, disconnecting, and lowering of the hoses, and furnish the appropriate manifold reducers. If, in the opinion of the Mooring Master, conditions so dictate, shore personnel may be used to ensure safe hose handling operations.

Manoeuvring of ships during approach to and within limits of the berth shall be done in accordance with the advice of the Mooring Master, subject to the understanding that in all cases and circumstances, the Master of the vessel being manoeuvred shall remain solely responsible on behalf of his vessel's owners, for the safety and proper manoeuvring of the vessel. The ship's Master or a qualified Deck Officer must be on the bridge at all times while the ship is manoeuvring.

ANCHORAGE: Vessels have anchored in the vicinity of 21° 16.6′ N. and 158° 03.5′ W. when waiting for mooring opportunity, but are cautioned to remain clear of approaches to both HIRI and Chevron Offshore Terminals. Vessels may also anchor in the designated explosive anchorage area in the vicinity of Honolulu Harbour but must contact their local agent for anchorage assignment and Pilot.

Under no circumstances should a tanker enter the restricted area around the Marine Terminal Buoy (See "Plan") without a Mooring Master aboard.

RESTRICTIONS/MAX. SIZE: See "Vessel Acceptance".

RADIO: 72 hours, 48 hours and 24 hours prior to arrival, tankers should advise HIRI and local Agents of their ETA by telex or cable.

VHF: During loading/discharging operations, the Mooring Master will have 2 portable VHF transmitter/receiver radios for communications between the tanker and HIRI Pumphouse Control Station.

Pacific Resources Terminals, Inc. and Hawaiian Independent Refinery Inc. have been licensed to use the following Simplex VHF frequencies:

Channel 6	Emergency	156.30 MHz
Channel 9*	Ship to Shore (primary)	156.45 MHz
Channel 16	Calling/Emergency	156.80 MHz
Channel 19A*	Ship to Shore (Secondary)	156.95 MHz

(*Either 9 or 19A may be used as working Channel).

HIRI Pumphouse	Call Channel 16, Communicate Channel 9/19A, Call sign: “KTD 466”.
Pacific Resources, Inc.	Call Channel 16, Communicate Channel 9, Call sign: “KIZ 799” (Not guarded).

Other useful VHF Channels are:

Aloha Tower, Honolulu Harbour Control:	Call Channel 16, Communicate Channel 12, Call sign: “KFQ 907” (Guarded 24 hours)
Honolulu Pilots:	Call Channel 16, Communicate Channel 12, Call sign: “WXZ 456”
Chevron Shipping:	Call Channel 16, Communicate Channel 10, Call sign: “KEN 778”
Davies Marine Agencies:	Call Channel 16, Communicate Channel 11, Call sign: “KXJ 712”
Hawaii Pacific Maritime:	Call Channel 16, Communicate Channel 10, Call sign: “KMC 208”
P & R Water Taxi	Call Channel 16 Call sign: “WYH 6327”
Hawaiian Tug & Barge (Pier 21)	Call Channel 16, Communicate Channel 18A Call sign: “WLX” (Guarded 24 hours)
Uakewai Diving, Salvage & Fishing, Inc./Marine Logistics, Inc.	Phone: 947-6881 or 737-4312
M/V “Nene”	Call sign: “WSR 3068”
M/V “Nahoa”	Call sign: “WJ 7030” Call Channel 16, Communicate any working Channel

TUGS: 2 boats are used to run lines to the buoys. Tugs may be used to assist manoeuvring at the Mooring Master’s discretion. A standby/diving boat will assist in lifting floating hoses. This boat will normally be one of the line handling boats and will remain with the ship throughout the period the tanker is in the berth.

Personnel launches may be arranged by ship through ship’s Agent.

TERMINAL FACILITIES: Hawaiian Independent Refinery, Inc. (HIRI) is located onshore in Campbell Industrial Park about 2 miles from the offshore tanker Marine Terminal.

A 30 in. crude pipe-line combined with a 16 in. pipe-line (black oil system) is used for receiving crude or loading black products and a 20 in. pipe-line is used for receiving/loading clean products.

The black oil system is connected by 2×16 in. floating hose strings reduced to 12 in. hoses over-the-rail with 150 lb. ASA flanges. The clean products system is connected by a 12 in. hose string with 150 lb. ASA flanges.

Maximum discharge rates from crude tankers at 150 p.s.i. rail pressure is approximately 45,000 bbls.p.h. Loading rate for black products is approximately 12,000 bbls.p.h. maximum; clean products approximately 10,000 bbls.p.h. maximum.

Normally, no dirty ballast is accepted. However, there are facilities to handle up to 20,000 bbls. of dirty ballast with charge for such use.

HIRI offers limited testing capabilities for crude received and products loaded.

MOORING/UNMOORING: Adequate floodlights should be rigged on both wings of the bridge when moored at night to facilitate detection of oil on the surrounding waters, and to illuminate mooring buoys, mooring lines, and tanker’s gangway.

The ship’s Master is responsible to ensure that no communication by the ship’s main radio transmitter is allowed within the terminal area.

The Master of each tanker will be given a copy of the General Instructions, Discharging/Loading Orders and Indemnification Letter which he will be asked to sign (See “Appendix”).

Tankers must have sufficient clean ballast for safe manoeuvring.

Officers accommodation should be ready for the Mooring Master and the Petroleum Inspector, and meals should be provided for both.

The Marine Terminal consists of a CALM-type SPM buoy and is designed to handle tankers up to 150,000 d.w.t. using 3 floating hose strings. 2×16 in. hose strings with 12 in. over-the-rail hoses with 150 lb. carbon steel flanges per ANSI-B 16.5 are available for crude oil/black products. 1×12 in. hose with 150 lb. carbon steel flanges per ANSI-B 16.5 is available for clean products. The tanker’s port boom is to be rigged to lift the floating hoses. Minimum SWL is 5 tons for tankers less than 50,000 d.w.t. and 6 tons for larger tankers.

Tanker manifold arrangement and lifting equipment should be in accordance with OCIMF “Standards for Oil Tanker Manifolds and Associated Equipment”, Third Edition, 1981 and as afterwards revised.

Mooring hawser is 18 in. circumference, double braided nylon grommet-type with standard OCIMF chafe chain B (76 mm./3 in.) and D (54 mm./2.125 in.). Pick-up rope is 9 in. polypropylene, 500 ft. long with soft eye. The tanker is required to provide suitable messenger, preferably 8 in. or 9 in. mooring line, to workboat from bow for connection to pick-up line.

Equipment provided by tanker is to be in accordance with OCIMF “Standards for Equipment Employed in the Mooring of Ships at Single Point Mooring”, 1978, and as afterwards revised, and includes specifically the following:

1. Maximum acceptable tanker size is 150,000 d.w.t.
2. Tankers less than 100,000 d.w.t. to have bow mooring equipment to connect a single 54 mm. (2.125 in.) chain with bow fairlead that measures at least 254 mm. (10 in.) in diameter. All bitts, bow chain stoppers or Smit-type brackets to have a minimum 100 ton SWL.
3. Tankers over 100,000 d.w.t. to have bow mooring equipment to connect a single 76 mm. (3 in.) chain with bow fairlead that measures at least 600 mm. × 400 mm. (23.5 in. × 17.75 in.). All bitts, bow chain stoppers or Smit-type brackets to have a minimum 200 ton SWL.
4. Tankers to have adequate forward winch heave capacity for lifting chafe chain system with buoy (approximately 1.5 tons).
5. Tankers with Smit-type brackets to have OCIMF chain part “D” or “F” and connecting shackles as appropriate.
6. Maximum distance from bow to centre of manifold is 470 ft.
7. Port side manifold to have 2×12 in. standard ANSI-B 16.5, BS 1560 Series 150 or equivalent flanges, with bitts, straps, tuggers, etc., ready for connecting 12 in. over-the-rail hoses.
8. Tanker crew to assist in securing the mooring chafe chain to vessel and connecting hoses to vessel’s port side manifold.

LOADING/UNLOADING: Hawaiian Independent Refinery, Inc. will make every effort to load or unload the tanker upon arrival or as promptly as berth is available, weather and other requirements permitting.

Notice of Readiness will not be received at the time of arrival at the Marine Terminal unless the tanker is in all respects ready to load or unload.

The Ship’s Master is responsible for his own ship at all times. The HIRI Mooring Master will advise the Master in respect to operating conditions and hazards, but will not direct the loading or unloading except as may be necessary to protect the terminal facilities. Manipulation of ship’s valves is the direct responsibility of ship’s personnel.

The tank inspection will be made by the Mooring Master or third party Petroleum Inspector, in company with the Chief Officer or Master of the ship. The Chief Officer will also insure that the sea suction valves are closed and sealed. Any computation of cargo by use of vessel’s ullages will be the responsibility of the tanker.

It is extremely dangerous to close a ship’s valves against the oil stream. Such a procedure creates excessive pressure, which may damage hose, ship’s piping, or terminal facilities. Tankers will be held liable for damages resulting from failure to observe this precaution.

When normal ship-to-ship communications fail, the transfer of oil will be steadily reduced until stopped. Pumping will not be restarted until communication is restored.

During loading or unloading, the International Code Flag “Bravo” must be displayed from a topmast signal halyard during daylight hours. A red light is to be displayed at night.

All rules and regulations concerning safety, local conditions, terminal operations and the transfer of oil will be carried aboard the tanker by the Mooring Master.

BALLAST: Owners and Masters are responsible for observing international laws and government regulations concerning pollution of the sea, having particular regard for this area of the Pacific Ocean.

Facilities can be made available to receive up to a maximum of 3,000 tons (approximately 20,000 bbls.) of dirty ballast. No contaminated ballast or bilge water will be discharged in the surrounding water. Tankers must notify the terminal 24 hours prior to arrival of ballast conditions. Ballast will be unloaded through the black oil system at a maximum pressure of 150 p.s.i. The exact amount of ballast to be accepted at any time will depend on the terminal conditions, and will be specified for each berthing. A charge is made for handling dirty ballast.

Drip pans must be used when disconnecting hoses. The waters in and adjacent to the terminal mooring must not be polluted. It is the responsibility of the ship’s Master to see that no oil of any kind is pumped or spilled overboard from his ship.

In addition to the lights usually displayed, a tanker discharging or loading cargo during darkness will illuminate the area around the ship and the tanker’s deck to the satisfaction of the Mooring Master, in order that any oil on the surface of the sea may be readily detected and appropriate action taken. If evidence of oil appears at any time, the tanker may be rejected or refused further loading or discharging.

A tanker must have sufficient ballast for safe handling, having due regard to existing weather and sea conditions. Through a careful watch of the weather and sea conditions, frequent exchange of information between ship and Terminal, and by a knowledge of the behaviour of his own ship, a ship’s Master may come to the Terminal with a minimum of ballast and thus lessen any possibility of infringement of sea pollution regulations.

Tankers equipped with a separate system of ballast tanks will be allowed to discharge ballast and load oil simultaneously, providing approval is first obtained from the Mooring Master.

Most responsible Shipowners have adopted a system of tank cleaning using circulatory methods of transfer of tank washing (COW) on shipboard and treating these washings with chemicals. The result is that no oil is discharged into the sea and the oil separated is collected in a slop tank. With the written permission of lifting companies, the Terminal will load on top of such slops. This system is highly recommended to avoid pollution of the Pacific Ocean.

Masters are warned that inspection of ballast is strict.

If at any time an overflow of oil occurs, loading will be suspended immediately, and not resumed until the oil is cleaned up and removed from the decks of the tanker, and/or from the surface of the sea, and any damage is repaired and no further danger exists. It is stressed that during loading and discharging operations, the Mooring Master will immediately slow down or stop the rate on receipt of a request from the ship’s Deck Officer in charge of loading or discharging.

All spillages of oil must be reported immediately to the Mooring Master, to the U.S. Coastguard National Response Centre (NRC) (toll free phone number: 1-800-424-8802) and to the local U.S. Coastguard Captain of the Port (808-541-2068/9). Subsequently, a detailed report in writing must be submitted by the Master of the tanker, or his agent, to the Captain of the Port, Port of Honolulu, U.S. Coastguard, giving all relevant details.

Under United States law, the consequences for failure to comply with the above will automatically result in a fine of not more than $10,000.00, or to imprisonment of not more than one year, or both.

FRESH WATER: Fresh water is available only at Honolulu Harbour at limited locations.

FUEL: Subject to availability, bunkers and diesel can be provided through advance arrangements with HIRI. Bunkers and diesel can be delivered by barge in Honolulu Harbour or off port and at Piers 29A and 32 – 35 in Honolulu Harbour. Products available are MGO, MDO, IF180, Bunker C, Intermediate grades. Bunker orders: Telex: 7430292. Telephone: (808) 547-3269 or 547-3205.

CONSULS: Consulates, if available, can be contacted in Honolulu. Prior arrangements by a ship Agent should be made if services are necessary.

REPATRIATION: Possible.

SHORE LEAVE: Shore leave is permitted. Arrangements are to be made by the ship through the Agent. All expenses incurred will be for the ship's account.

WEATHER/TIDES: The Master is referred to published sailing instructions for this area for information on tides, currents, wind and weather.

The Hawaiian Islands are dominated in all seasons by tradewinds from the N.E. These tradewinds are present about 75% of the time and their average velocity is 12.5 m.p.h. They exceed 20 m.p.h. approximately 2% of the time; however, gusts approaching 100 m.p.h. are possible.

Hawaii's average temperature ranges from about 74°F in March to 79°F in September. Almost everywhere in Hawaii, the warmest and coolest months differ, on the average, by only 9° or less.

"Kona" weather refers to the Southerly winds which occur most frequently during the months of October through April. During these storms, heavy rainfall and cloudiness can be expected. Moorings scheduled during these months may be subject to delay.

The predicted times and heights of the high and low tides are published for Honolulu. The periodic tides around Barber's Point average only 1 ft. to 2 ft. and are normally mixed. The effect of strong winds added to normal tidal action may cause water levels to fall considerably below chart datum and/or rise considerably above MHHW. At Barber's Point where the trades usually blow directly off the land, a shift to Kona winds or to a calm has been observed to raise the tide level a few tenths of a foot.

Currents at the mooring normally run parallel to shore in an Easterly and Westerly direction. The maximum velocity varies from 3.0 ft. per second on the surface to 1.3 ft. per second 3 ft. above the sea bottom.

Tsumanis or tidal waves are possible in this area although quite infrequent. On receipt of a tsunami warning, tankers will be unmoored and will proceed to safe locations until the warning is lifted or the danger is passed.

APPENDIX:

TO: Master

SUBJECT: GENERAL INSTRUCTIONS, DISCHARGING/LOADING ORDERS AND INDEMNIFICATION

In addition to those regulations mandated by the U.S. Coastguard for vessels operating in U.S. waters, the following instructions and guidelines are provided to encourage safe operations while your vessel is moored at the HIRI Marine Terminal.

A. GENERAL. It is expressly understood and agreed that at all times and under all circumstances, the Master of the vessel will remain solely responsible to his vessel and her Owners for manoeuvring, mooring and unmooring of the vessel, connecting and disconnecting cargo hoses, discharging and loading cargo, ballasting, pollution prevention and adherence to Coastguard Regulations and these instructions.

B. POLLUTION PREVENTION. A Mooring Master has been assigned to assist in the mooring of your vessel, connecting of cargo hoses, discharging/loading of cargo, disconnecting cargo hoses, unmooring and departing from the Marine Terminal, and to provide information on matters relating to the Terminal facilities. The Mooring Master additionally will act as a Pollution Prevention Officer. In this capacity, he will maintain surveillance over cargo operations and require that all regulations be observed. The Mooring Master may direct your vessel to discontinue cargo operations or unmoor at any time he deems it necessary for the safety of the vessel or the Marine Terminal, or to prevent violations or infringement of U.S. Coastguard Regulations or these instructions.

C. INDEMNIFICATION. It is understood and agreed by you on behalf of the vessel and its Owners that the Mooring Master, operators and crew of the tugs, assist and standby launches, and said launches and tugs, are supplied upon the condition that in the performance of any service they may render to your vessel, that they are the servants of the vessel and its Owners in every respect and not the servants of Hawaiian Independent Refinery, Inc., Pacific Resources Terminals Inc., Pacific Resources, Inc., or its subsidiaries, or the Owners of said launches. It is further agreed that the vessel and its Owners shall indemnify and hold harmless Hawaiian Independent Refinery, Inc., Pacific Resources Terminals, Inc., Pacific Resources, Inc., and its subsidiaries and the Owners of the assist and standby launches, from any liability, loss, claims or damages arising out of the rendering of services to your vessel by said Mooring Master, operators, crews and launches, whether or not arising out of the fault of said Mooring Master, operators, crew or said indemnitees. In addition, it is expressly agreed that the presence of the Mooring Master on board in no way relieves you, the Master of the vessel, of any legal responsibilities. FINAL DECISIONS REMAIN YOUR PREROGATIVE.

D. CHARGES. Charges for the service of the Mooring Master will be for the account of your vessel and Owners.

E. LANGUAGE OF PORT. The official language of the Marine Terminal is English. The ship will provide personnel available at all times capable of communicating in English with the Mooring Master and between the ship and personnel ashore.

F. DISCHARGING. After your vessel is properly moored at the Marine Terminal, cargo hose(s) will be connected to the ship's manifold. The ship's crew will be required to perform this function, supervised by a qualified Deck Officer. When the vessel is ready in all respects to commence cargo operations, and the HIRI personnel have indicated their readiness to receive cargo, the vessel shall commence the discharge of cargo at the rate of approximately 12,000 U.S. bbls.p.h. in order to displace the material in the pipe-line. Thereafter, upon receipt of instructions from the Mooring Master, vessel shall increase to maximum pumping rate using all main cargo pumps, but not exceeding either 225 p.s.i. at the vessel's rail or a flow rate of 34,000 b.p.h per 12 in. cargo hose.

G. LOADING. After your vessel is properly moored at the Marine Terminal, cargo hose(s) will be connected to the ship's manifold. The ship's crew will be required to perform this function, supervised by a qualified Deck Officer. Prior to commencement of loading, the tanks must be inspected by an independent third party inspector to determine whether the tanks are in suitable condition to receive cargo. When the vessel is ready in all respects to receive cargo, it must notify the Mooring Master who, in turn, will co-ordinate the commencement of loading with the refinery. The refinery will commence loading at the rate acceptable to you and will increase the loading rates as per your instructions. The maximum refinery loading rate is approximately 12,000 b.p.h.

H. BALLASTING. For the safety of your vessel and at your discretion based upon the weather, sea and wind conditions, etc., the discharge of cargo should be arranged so that when approximately 65% of the total cargo has been discharged, there will be sufficient empty and dry tanks to accommodate ballast as required to produce a mean draft of approximately 25 ft. and in a trim condition, not to exceed 6 ft. by the stern upon the completion of discharging operations. The independent third party inspector will conduct the inspection of the tanks prior to the loading of ballast and again upon the completion of discharge of all cargo.

I. OIL SPILL. It is unlawful to pollute the waters adjacent to the State of Hawaii. It is the responsibility of the Master of the vessel to assure that no oil (crude oil, bunker fuel, diesel, bilge oils, etc.) is spilled or pumped overboard. Drip pans must be provided at the flange connections. In the event of an oil spill, or any other occurrence which results in pollution of the sea, the U.S. Coastguard, the Mooring Master and the vessel's "Agent" must be notified immediately. The Mooring Master will notify the U.S. Coastguard immediately if the ship's Master fails to do so. By Federal Order CFR 153.305, no dispersants will be applied to an oil spill without U.S. Coastguard approval. Failure to report pollution, regardless of the extent thereof, will result in severe penalties being imposed by the State of Hawaii and the U.S. Coastguard. No garbage or trash will be discharged in the mooring.

J. EMERGENCY UNMOORING. A sufficient number of officers and crew members must be on board at all times to disconnect the hoses, unmoor, and vacate the berth, should such action become necessary, or be deemed advisable. The main engine must be kept ready for use at all times. Under no circumstances are engine repairs to be undertaken while the vessel is moored in the sea berth.

K. MISCELLANEOUS. We desire that the discharging and/or loading of cargo will be done safely and efficiently, and that your stay in Hawaii will be pleasant. To this end, please do not hesitate to call upon us for any assistance we may be able to render.

You are requested to sign and return the attached copy of these instructions in acknowledgement of receipt, understanding, and agreement therewith.

Hawaiian Independent Refinery, Inc.
Refinery Manager.

Master

____
Date and Time

SAFETY: Tanker personnel safety equipment will be adequate, readily available and clearly identified, as required by U.S. Coastguard regulations. The tanker shall ensure that life ring buoys are kept available in the vicinity of the pilot ladder and the ladder will be kept at a proper height for safe boarding on and off. The vessel's fresh air masks and resuscitators shall be in readily accessible locations for immediate use.

GENERAL: *Stores:* Stores are available in Honolulu. Stores cannot be loaded on the tanker while in the mooring berth without the express permission of the Mooring Master; vessel usually receives stores off Honolulu.

Laws: The laws of the United States govern this Terminal, and all personnel are required to abide by them.

Language: Language of the port is English. Interpreters for certain other languages may be arranged by ship's Agent. Tanker officers in charge during cargo and bunkering operations must have English conversational capability.

Charts/Publications: Vessels should have U.S. NOAA Charts No. 19340 (Hawaii to Oahu), No. 19357 (Island of Oahu) and No. 19362 (South Coast of Oahu: Ahua Point to Barber's Point) or the equivalent British Admiralty Charts on board.

United States Coast Pilot, Volume 7, provides detailed navigational information to supplement that printed on the charts.

OPERATOR: Hawaiian Independent Refinery, Inc., 733 Bishop Street, P.O.Box 3379, Honolulu, Hawaii 96842. *Tel:* (808) 547-3241/3648. *Telex:* ITT: 7430292. *Cables:* Primarine.
